In spite of the long campaign in favor of pedigreed dairy cows, there are still very few of them on American farms, if we compare the total number of pedigreed cows to total cows on farms. There are, however, a good many pure-bred cows that have not been registered and hence are not counted as pedigreed.

Of course, a pure-bred cow that has not been recorded is just as valuable as a cow that has, except for the production of calves that are to be sold. In a little while the unpedigreed line loses its identity, while the pedigreed line retains its pedigree and its history.

If one desires to get anywhere in the breeding of dairy cows, he must stick to the pedigreed line. Anything else lends itself to the hit-or-miss programme. It is impossible to get anywhere in breeding by the use of animals whose progenital lines are not known. Even though a cow used for breeding be a good milker, there is no certainty that her calves will be equally good.

The writer has in mind a remarkable cow of this kind. She gave a large amount of milk, and the milk was very rich in butter-fat. It was desired to perpetuate the good qualities of this cow, and all of her heifer calves were raised. But not one of them proved of any particular value. They evidently took the qualities of some ancestors anterior to the mother, and those ancestors did not have dairy qualities.

And here is the principal point in favor of pedigreed cows for breeders: A calf does not by any means partake only of the qualities of the mother and sire, but of the qualities of the past mothers and sires. It is as necessary to have good ancestors back of the immediate parents as it is to have good parents. In the cow of unknown breeding the quality of the ancestors has to be ignored. It is this necessity for ignoring a fundamental fact that makes the unpedigreed cow about useless for breeding purposes when it is desired to breed up a herd of dairy cows.

Ancestry counts, both in men and animals. The farmer that puts a true value on pedigree will be at least laying the right kind of foundation in theory. It is probable that with right usage of pedigree a man can materially increase the milk product of his herd without increasing the number of cows.

But all breeding must be done with intelligence. Investigations into the qualities of ancestors of cows are necessary to determine the value of any particular pedigree. There are many ordinary performers among pedigreed cows. The idea of the line breeder is to constantly eliminate these pure-bred scrubs by sending them to the butcher. Every intelligent breeder recognizes their existence. Some of the poorest cows the writer has ever known of had pedigreed ancestors. Among pedigreed stock many blanks are drawn, and it is to that extent a lottery. But with most breeds the process of breeding and elimination has been carried so far that there are more high prizes than blanks. It is within the power of any breeder of dairy cattle to improve his herd provided he has the right material to work with, and the only way to insure having the material is to see that the animal has no outcrosses to other breeds or mongrel cattle.

The Best Separator Today

is the

U. S. Cream Separator

You do not care who invented the Cream Separator. You want to know which is the **best separator today.**

The **United States Separator** has demonstrated its absolute and complete superiority over all other Separators. It holds the **world's record** for closest skimming, in fifty consecutive tests, continuing through a period of thirty days. with the milk of ten different breeds of cows. It was awarded the only **Grand Prize** at Seattle, 1909.

Cream skimmed by the **United States Separator** is used by 99 99/100 per cent. of all creameries. They can't get enough U. S. Cream. We originated and perfected the cream gathering system which has put whole milk factory separation out of business. Not 10 per cent. of the **whole milk factories**—of which a "would-be-competitor" claims a monopoly—that were in operation 10 years ago, are running today.

Closest skimming, easiest running, easiest to wash, longest lived—these are the chief reasons why the U. S. is the best separator of **today.** Don't buy any separator until you have sent for catalog **125.**

Vermont Farm Machine Co., Bellows Falls, Vt.

[Please mention National Farmer and Stock Grower.]

A Forgotten Big Cheese.

And now it turns out that the honor of making the "biggest cheese yet" does not belong to Wisconsin after all. The claim comes from Boston that a cheese was made in the Utica section of New York state in the fall of 1883 which weighed 5,233 pounds. Its height was 44 inches, diameter 64 inches, and circumference 201 inches. The cheese was sold in Boston at 30 cents a pound. This cheese was 751 pounds heavier than the monster exhibited at the recent National Dairy Show.—New York Produce Review.

A Strong Test of Merit

The very fact that an implement has been continuously on the market for half a century should inspire a purchaser with confidence in it and in its makers, for no implement could remain on the market for that length of time and still grow in popularity unless it would do all that its makers claimed.

The word "Hoosier," when seen on a grain drill, stands for "quality," because Hoosier Drills will do all—yes, more—than is claimed by their makers. These grain drills are in use to-day in every country where small grains are grown. Hoosier Drills are made in all styles and sizes, in order to successfully meet the seeding conditions in every part of the world. Any style furrow opener can be had—single disk, double disk, hoe or shoe. Drills with and without press wheel attachments; Press Drills, Broadcast Seeders—in fact, any style that is wanted—can be found in the Hoosier line. These Drills are manufactured by The American Seeding-Machine Co., Incorporated, Richmond, Ind.—a company that has had more than a half century of experience in the making of seeding machines—a company that gives a guarantee to every purchaser that means something. Send for a Hoosier catalogue, then go to your local implement dealer and insist on seeing the Hoosier—the drill that never disappoints—the drill that does all and more than is claimed for it.

International Butter Trade.

Few people will believe that there is much prospect of foreign butter being offered for sale in the United States, yet if the duty was taken off butter there would be importations. Middle of December quotations of foreign butter in England were as follows: Finest grades—Danish, 25 to 25½c.; New Zealand, 23 to 23½c.; Australian and Argentine, 22½ to 23c.; Siberian, 21 to 22c. Here we have five countries unloading their butter in England because there are not enough farmers in England, or farm land in England, wherewith to raise crops to feed the people.

Consumers will naturally ask themselves the question: "Why not buy our butter from these foreign countries if they have a surplus? The answer is very plain. If the butter money goes to Denmark or Australia it will never come back. The farmers of New York, Pennsylvania and other states buy American manufactures with the money they get for their butter, and the money that goes out to the foreign country for butter will fill no dinner pails in the manufacturing cities of America. This article is respectfully dedicated to the people who are insurging in favor of making the United States prosperous by taking the duties off farm products in order to give preference to foreign food stuffs instead of our own.

Holstein Performance.

One hundred and sixty-two Holstein heifers and cows, of which 40 per cent. were heifers with first or second calves, produced in seven consecutive days 62,671.8 pounds of milk, containing 2,154.171 pounds of butter-fat, thus showing an average of 3.44 per cent. fat. The average production for each animal was 386.8 pounds of milk, containing 13.297 pounds of butter-fat, equivalent to 55.3 pounds or 26½ quarts of milk per day, and over 15½ pounds of the best commercial butter per week. Many of these records were made while the cows yet had frosted pasture grass as a part of their ration, and so are not as large as they might have been; and it will be noted that the best results in dairy husbandry are always obtained when the animals are stall-fed, thus giving the feeder entire control of the ration. These cows and heifers were being tested for advanced registry and naturally were selected cows.

New Milk Condenser.

It is reported that a new milk condenser has been invented by a Mr. Corliss, of Omaha, Neb., and it appears that it can be operated economically on a comparatively small scale. It is also stated that with old-style condenser it is necessary to have 40,000 to 50,000 pounds of milk in the machine at a time to get results, and in the new machine a finished product can be turned out with as small an amount as 350 pounds of milk, and the cost of the machine is one-tenth of the old-style machines.

The moisture is all taken out of the milk, leaving the fats and solids. The condensed material is especially adapted to candy and ice cream making, and the inventor claims it leaves the product sterilized, that it can be shipped long distances without danger of spoiling.

If the machines stand the test of economy of process and the product is in no way deteriorated, it will open up new competition for the milk producer.

Rival to Missouri Chief Josephine.

New York state has a rival to the Missouri champion dairy cow, the Holstein Chief Josephine. The New York cow is Lunde Korndyke, 75,838, also a pure-bred Holstein cow, owned by J. J. Larabee, of Dempster, N. Y. This cow produced 128 pounds of milk in a day, or more than sixty quarts, 3,200 pounds in thirty days, and in 198 days has to her credit 18,413 pounds of milk. Her butter production, on the 80 per cent. basis, for this time is more than 714½ pounds. The record of Missouri Chief is for one month—3,002 pounds—average, 96 pounds of milk a day; for six months, 17,000 pounds; an average of 93 pounds per day; and for nine months, 23,351 pounds of milk, an average of 85.5 pounds of milk per day. Both these cows are undergoing yearly tests, and it will not be long before the result of the full-year tests will be available.

No Color With Oleomargarine.

The New York Produce Review reports that recently in a municipal court in Brooklyn Peter H. Van Kampen, a retail grocer, was found guilty of violating the state oleomargarine law and fined $100 and costs. The evidence showed that Van Kampen was in the habit of giving a color capsule with each print of oleo that he sold, and as the oleo was white, some of his customers used the capsules and colored it like butter. The case is to be appealed, but so far it is a victory for the New York Board of Agriculture, as the suit was brought by the officials of the state.

Dairy and Creamery Notes.

The Minnesota Experiment Station has found bran to be an excellent feed to combine with corn fodder and timothy or wild hay, as a ration for the milch cow.

The new Canadian milk standard defines milk to be "the fresh, clean and unadulterated product obtained by the complete and uninterrupted milking, under proper sanitary conditions, of one of more healthy cows, properly fed and kept, excluding that obtained within two weeks before and one week after calving, and containing not less than 3.25 per cent. of milk fat and 8.5 per cent. of milk solids other than fat."

The Milk Reporter of December said: "Butter—extras—quoted in the New York market at 31 cents a pound and milk 4¼ cents a quart, which gives 7.3 quarts of milk the same market value as one pound of butter."

The Holstein-Friesian Register mentions a sale of Holstein grade dairy cattle at auction held by Gould Bros., of Sterling, Mass. The forty animals sold for $3,500, an average of $87.50 per head, which included cows, heifers and two bulls. This was a herd kept solely for milk production.

According to the Department of Agriculture, the average price paid by the consumer for milk is 32 cents a gallon, and the milk producer gets an average of half the money. It will also be discovered that out of half the money the milk producer pays the freight bill.

The Wheat Market Situation.

Wheat ought to sell higher, because the statistical situation justifies an advance. We hope nobody will be alarmed, because we are not intending to go into figures. The wheat crop of the United States is short, but it does not represent a world shortage, and wheat is a world's crop and seeks its price level. Now that the Chicago December quotation closed at 92½ cents the interest centers on the May quotation, which on December 31st closed at 97 cents and which is the next on the list, and we remember that the May quotation last year was closed out at $1.34 per bushel.

The May option on the Chicago Board of Trade represents a powder magazine that is unguarded against explosion. The May wheat option has caused more losses and made more fortunes than all the other options of the year. The excitement does not usually begin until March, when the government report of quantity in sight is made known. In the meantime other reports are gathered by those who are deeply interested, and immense sums of money are expended to get control of supplies, providing actual conditions justify the prospects of an advancing market. Such men as Mr. Patten, who retires from business every year, do not hesitate to assist nature by buying such supplies as may be in the way at a critical moment, but none of the Board of Trade operators are so rash as to show a shortage out of an abundance; in other words, they may attempt to push the market along in the direction they believe it is going, but not by main force of money to change its direction.

Whether wheat for delivery May 31st will advance during the next two months appears to be doubtful; after March 1st it is more than probable. We do not take it for granted that wheat will advance, neither do we expect to speculate in wheat to substantiate our views; but the crop is harvested, it is gradually being exhausted, and it will be nearer consumed in March than in January; therefore, if there is a shortage of sufficient dimensions to advance prices, it will be more apparent in April than in February. A farmer who has wheat in store and who can afford to hold it is not likely to lose anything by keeping it until the struggle over prices of the May option begins.

The Market For Corn.

Whenever we desire to know anything about the market for corn we try to ascertain the actual facts. We turn to the daily market report, showing exactly what corn is selling for as delivered at St. Louis on the day of sale. By corn we mean No. 2, the corn which is the standard grade. If we wish to take a peep into the future we look towards Chicago and we have considerable respect for the Chicago quotations. We also look over the past record and we take the most recent quotations and consider them as the actual average opinion of the Chicago dealers on the date the quotations are made.

The Board of Trade opinions vary from day to day, but they are always backed by actual transactions. There are many people who imagine that the Chicago dealers are dealing in mind; that the quotations are simply figures on a board; that the manipulation of the market is simply a twist of the wrist; but in actual fact the trading is in real corn and every contract entered into is a transaction in real money. All ideas of fictitious transactions may be abandoned. The man who sells has to deliver the goods or pay the difference at the appointed time, and the man who buys corn has to receive the goods or pay the difference—the trading is bona-fide, every item of it.

On December 31st, at St. Louis, Mo., cash corn No. 2 was bought, sold and delivered at 44 cents a bushel. At Chicago the December option was closed out by final deliveries and settlements at 46½ cents, an advance of 2¼ cents over the price quoted November 30th.

On December 31st, at the close of the trading of the year 1910, the Board of Trade quoted corn to be delivered not later than May 31st, 1911, at 48½ cents a bushel. This figure may be changed daily, but there it is—take it for what it is worth. The July quotation was 49⅜ cents, barely one cent a bushel to carry the corn two months longer.

Any farmer can keep himself posted in regard to the grain market by looking at the reports published in every daily paper. The farmer need not get his information from Tom, Dick and Harry on the highways and byways. Neither need he get it from anyone who is trying to buy his corn. The farmer is able to get it from the original source before it is a day old.

Immense quantities of corn are sold by farmers to farmers and stock feeders. The surplus shipped to market to sell as grain, great in quantity as it appears to be, is but a fraction of the grand total of 3,121,681,000 bushels raised upon the farms of the United States in the year 1910.

The grain traders believe that corn has touched bottom, and we have no reason to try and make believe that we disagree with their opinion.

The broom corn scarcity appears to be over. It is no longer a bonanza crop. The great advance in prices has been followed by a disastrous decline.

Better Potatoes Wanted.

The demands of consumers for better quality of eating potatoes are becoming insistent enough to induce growers to hunt for better varieties than are now commonly grown. The facts are that good cooking quality has been sacrificed for greater yield, and little or no attention has been given to the demands of consumers. Experimental work with different new varieties will be done the coming season, to determine which ones possess desirable qualities, and are fair yielders as well, with a view of getting better eating stock. The Irish Cobbler, an old-time, very early potato, is one which I esteem very highly. It has been neglected for several years simply because of exaggerated reports about the wonderful yield and quality of "Bliss" and "Six Weeks" and other so-called early sorts. To my notion, the Cobblers or Early Rose are better potatoes than any of the newer earlier varieties. We want a potato with rather smooth skin, shallow eyes, and so long as it has good cooking qualities we are not particular whether it is round or long.

Potato growers have fallen into the same error as corn growers. They are growing stocks which will not mature, except under favorable growth conditions, consequently have great quantities of green stuff to dump upon the markets every fall. Earlier, ripe stock will insure better keepers and better cooking qualities and much greater consumption. Burbank is a good variety, and housewives generally like them. They are good for boiling or baking and have a flavor which is liked by many; still they are not extensively grown because they will not produce as much bulk as the big, round varieties. Green Mountain is another good sort of splendid flavor, and among the long, white-skinned sorts there are many splendid cookers. City consumers are discriminating between good, sound stock and big, coarse stock, with the result that growers who will pay more attention to cooking quality can readily command a premium for their stuff.—L.C.Brown.

The Canadian wheat crop of 1910 is 27,145,000 bushels greater than was estimated at harvest time. The total is 149,920,000 bushels, which is a very good showing for the acreage cultivated in wheat.

Dried Fruit at St. Louis.

First New Year quotations: Apples—Evaporated rings at 7¼ to 7½c. for choice, 7c. for prime and 5½ to 6½c. for poor to fair; waste at 2½ to 2¾c.; chops at 3 to 3½c.; sun-dried—choice quarters at 5¾c.; prime at 5 to 5¼c.; poor to fair do. at 4¼ to 4½c. Peaches—Sun-dried halves at 5c.; choice stock worth more.

FARM AND RANCH LANDS.

ARKANSAS.—Buy a farm in White county. Good improved farms $8 to $15 an acre. Large list and Home-seekers' Guide mailed free. Sate map 15c. **L. E. Moore,** Searcy, Ark.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad passes through the tract with location for a town on the property. Within sixty miles of the city of Appalachicola and its fine harbor. Soil a sandy loam with clay subsoil, adapted to the growing of truck garden, fruits, pecans, grapes, etc. Near to this property is where is grown the famous Sumatra leaf wrapper tobacco.

There is estimated to be now on the land about 3,500 feet per acre of yellow pine timber, or a total of about 175,000,000 feet. It is claimed that there are no swamps or wet land, except a small acreage along the creek.

This property is well located as to climate and soil for a subdivision and colonization proposition.

Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

FLORIDA for 25c. Big Monthly Magazine. Questions answered about land of Flowers. **Fruit & Produce News, Box E, Tampa, Fla.**

MISSISSIPPI.—25,000 acres on two railroads, in Jackson county, Mississippi. A sandy loam soil with red clay subsoil; moderately level, yet sufficiently rolling to drain and cultivate well. Good water; delightful climate. Here can be grown cotton, corn, oats, potatoes, both Irish and sweet, and nearly all kinds of garden truck, besides figs, Satsuma oranges, grapes and berries of many kinds. Price, six dollars $6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—4,120 acres of rich, cut-over, well-drained bottom land, within one mile of railroad station. Located in the rich, productive region of Stoddard county, Southeast Missouri, where such great crops of cotton, wheat, oats, corn, timothy, red clover, alfalfa, potatoes, and in fact, nearly all kinds of grains, grasses and fruits and vegetables grown in the United States are produced as well. The land is very rich and the region is developing rapidly. It will cost about $10 per acre to get the land ready for plowing. Good markets and shipping facilities. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—1,700 acres of "cut-over" timber lands, located in Reynolds county, Missouri, nearly 125 miles south of St. Louis. Not a solid body, but in tracts of 40, 80, 100, 200 and 320 acres. About 25 to 40 per cent. can be used as farming land, remainder for orchards and pasture. Some of it hill land, some rolling, some smooth. Excellent water; very healthful climate. Good land for growing poultry, stock and fruit, especially apples, peaches, grapes, strawberries, blackberries, etc. The timber is chiefly oak and hickory, and it is estimated that there can now be cut nearly 3,500 feet per acre. Price $5.00 per acre. **T. H. Jones,** 513 Roe Bldg St. Louis, Mo.

MISSOURI.—385 acres of rich, well-drained bottom land, excellent for corn, wheat, timothy, clover, alfalfa, cotton, fruits and vegetables. Nearly three-fourths in cultivation remainder in timber. Four tenant houses four barns, good fencing and land easily cultivated. A rapidly-growing region, with schools, churches, good markets, a mild climate and very rich soil. Price, $70 per acre. **T. H. Jones,** 513 Roe Bldg., St Louis, Mo.

NEW MEXICO.—136,000 acres of slightly rolling, well-drained land, in one body, now used as a good stock ranch, located about twenty miles from Roswell, New Mexico. It is estimated that four-fifths of the land would be well adapted to agricultural purposes, it being about the same quality and characteristics of thousands of acres now in farms in the Pan-Handle of Texas, and which is being sold at $10 to $20 per acre. Much of this land, situated in the valley, is a black, alluvial soil, well adapted to agricultural purposes.

This property might be subdivided, then sold into small farms, especially following out the methods of dry farming.

The ranch is well equipped with water holes and a number of wells and windmills. It has a substantial fence of five wires.

There are prospects of a railroad being built through the land.

Price, six dollars ($6.00) per acre. Reasonable terms. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

Poultry for Profit

Locations in the Southeast should appeal to Poultry Raisers. The ease with which poultry can be raised there and the demand mean best advantage in profit making. The climate gives a laying period of ten and one-half months—hens get green food for that time. Poultry products find market at high prices in Southern cities, the North and in the West Indies. Lands at a low price suited for poultry, for fruit truck and general farming. Our publications sent on request.

ANOTHER SUBSCRIPTION OFFER.

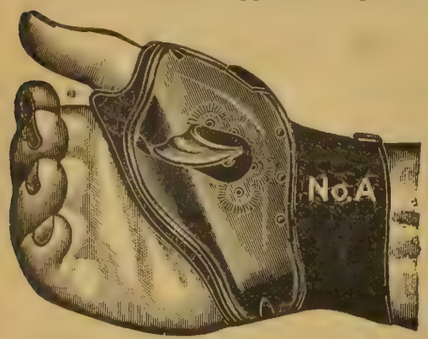
A Chance to Win Prizes at Any Agricultural Fair in the United States.

The above picture represents a photograph of Garton's New Breed of Black Oats. VICTOR is the name. The Gartons are the great oat breeders of the world. The VICTOR is the largest-grained black oat and the blackest-skinned oat in cultivation. Especiall suitable for early sowing, owing to its extreme hardiness. The amount of protein or flesh-forming constituents which the grain contains makes it 25 per cent. more valuable for feeding purposes than any other oats grown.

Do you wish to win prizes? If so, send us a dollar for two-years' subscription to The National Farmer and Stock Grower. We will also send you two pounds of VICTOR oats. From this you can raise your own seed hereafter and win prizes at County, State and National Fairs. We offer the same premiums that we do for corn on page 30. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husk and prevent clogging. As this is the most approved husker on the market, we have selected it is a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and



back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Alfalfa in Canada and Argentine.

"From Ontario, Canada, comes the report of a yield of four tons of alfalfa to the acre in three cuttings, on a clay hillside; at far-off Medicine Hat, Northwest Territory, it makes a growth pronounced 'phenomenal;' and at the experiment farm at Brandon, Manitoba, three cuttings per year are harvested. On a gravelly hill in the District of Columbia a field was sown in April, 1900. Two crops were cut from it that summer, three in 1901, and the first cutting in 1902 yielded three tons per acre. In Southern Minnesota some thrifty Germans, not knowing 'that alfalfa will not grow in Minnesota,' have been raising it since 1872, while others were declaring it impossible. A half-score of men in the sagebrush wilds of Nevada decided to try it, and in 1872 they had 625 prosperous acres, without plowing and without irrigation. J. H. Grisdale, Agriculturist of the Central Experimental Farm at Ottawa (Bulletin No. 45) says: 'It is grown in Canada more or less extensively from the Atlantic to the Pacific. It is the staple forage plant for winter in the dryer part of British Columbia, and it has been grown in Southern Alberta for many years. It is not much known in Manitoba, but is possible of easy propagation in almost all parts of Ontario. It is and has been grown long and successfully in Quebec, and is not unknown in Nova Scotia and New Brunswick.' In Cape Colony, South Africa, 'lucerne can be cut from four to six times in summer and from once to twice in winter, and is the greatest forage plant in the world.' In 1901 the British Consul at Buenos Ayres reported alfalfa as covering 'an enormous area in Argentina, and every year becoming more important.' "—From Coburn's "The Book of Alfalfa."

Lime-Sulphur and Apple Foliage.

Much has been said during the past season about injury to foliage of apples by lime-suphur solutions. You will hear more about it this winter at all the fruit growers' meetings. It is a subject in which every live fruit grower is especially interested this season, as the great question now is: "Is Bordeaux to be replaced by the lime-sulphur as a summer spray?"

Mr. Errett Wallace, our lime-sulphur expert, has prepared Bulletin No. 288 on lime-sulphur injury. Mr. Wallace's experiments and observations on this question indicate, first, that heavy drenching is a common cause of foliage injury; second, that much of the burning of apple foliage this year following the application just after the blossoms fell was due to previous scab infection of the leaves; third, that arsenate of lead is the only insecticide that we yet know which may be used in the lime-sulphur with safety. It not only decreases the burning, but actually increases the fungicidal value of the mixture by 50 per cent.; fourth, that injury to the fruit and foliage by lime-sulphur is much less serious than that caused by Bordeaux under the same conditions; fifth, that the addition of lime or the presence of sediment does not materially affect the burning qualities of the lime-sulphur, one way or the other; sixth, that cultivated, vigorous trees will withstand foliage injury better than trees in neglected orchards.

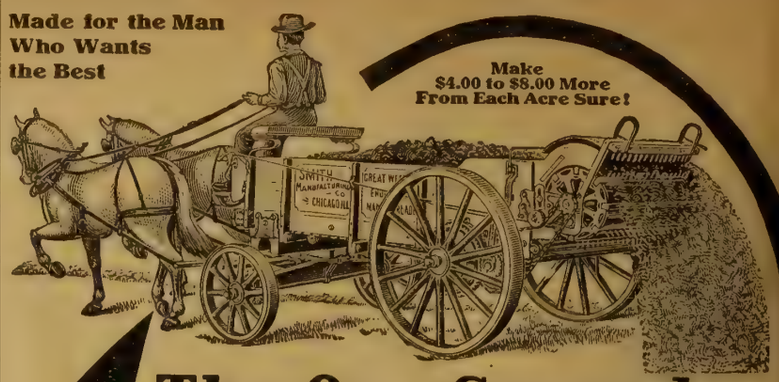
Many other qustions of direct and practical interest to the grower are fully discussed in this bulletin. If you expect to spray next year you will certainly want to see this bulletin. It will be sent to those who are sufficiently interested to ask for a copy. Drop us a postal card, saying you want the bulletin, and we will see that it is sent to you. Signed, H. H. Whetzel, Plant Pathologist, New York State College of Agriculture.

Rice Average Crops.

The highest average production of rice per acre is in Arkansas, 40 bushels, against 34.4 bushels in Louisiana; 33 bushels in Texas; 30 bushels in Mississippi. These are the only states producing upwards of a million bushels of rice. The total crop of the United States is estimated at 24,510,000 bushels.

Made for the Man Who Wants the Best

Make $4.00 to $8.00 More From Each Acre Sure!



The One Spreader That Stands the Strain

You want a *strong* spreader—one that can stand the strain. There is *only one* in that class. It's the Great Western. Over 100,000 progressive *farmers*, and most *U. S. Government* and *State Experiment Stations* have proved it. See the Great Western alongside of the next best spreader. Then you will know why we can guarantee every Great Western to stand 50 per cent more strain and require 50 per cent less repairs than any other spreader in the world.

The reason is *high quality*. We build spreaders as they *should* be built. When you know how much *more* oak, hickory, malleable, steel and wrought iron is in the Great Western Spreader than in any other, you'll *understand* why the Great Western is the *only* spreader *strong enough* to *stand the strain*. When you know what *other* spreaders are made of it won't be hard for you to understand why they are *not* strong enough to stand up under the heavy loads and hard work. The

Great Western Endless Apron

Spreader has an endless apron that runs on 3 sets of extra large rollers—drawn equally from both sides, so there's no friction—no binding, no matter how unevenly you load it. The Great Western Spreader has a big, 16-inch, 40-pound, unbreakable, Malleable fifth wheel. You can't pull out the front end no matter how heavy the load or how many horses you put on. The big malleable fifth wheel is attached to *two*, big, solid oak bolsters, by malleable braces. The Great Western front trucks are set two feet under the load—so the load is carried equally on the four wheels. Great Western pole is made of solid oak—*not* pine or inferior woods. Our big Free Book tells about all the Great Western advantages. It proves how much better it is to pay a few more dollars *at the start* for a Great Western Spreader than to be paying the toll of constant trouble, delay and repairs that *any other* spreader is sure to mean. Don't buy any spreader till you read the startling spreader facts in our book. Send us your name *now* and ask for Free Spreader Catalog No. S254 Address

SMITH MFG. COMPANY
158 E. Harrison St.
Chicago

No matter what size or style of spreader you want, wooden or steel wheels, 35 to 100 bushels capacity—you'll suit yourself best by getting a guaranteed—

Great Western

Farming as a Business.

The man who "makes a business of farming" should have a business card; some printed letter-heads, with the name of the farm home thereon, and should pay his bills with checks on his bank. All these little things not only "make business," but help to dignify his calling, improve his social standing and enhance his credit.—Farm Press, University of Missouri.

We Want to Talk

Wagon Wheels

To You

Better, stronger, more convenient wheels than you have ever used. We are making old wagons over for thousands of farmers; making them as good—even better than—they ever were, by fitting

Electric Steel Wheels

on their old running gears. How is your old running gear? Good, is it not? And the wheels—worn out? Wouldn't it pay you to write us a postal and let us show you how cheaply we can turn your old running gears into a rattling good, low-down, handy farm wagon? We have a great book for farmers to read who think their old wagons are "done for". A postal brings it. This penny investment will save you many a dollar. Write for the book to-day.

Electric Wheel Company

To Furnish Military Horses.

We do not agree with the Secretary of Agriculture in his recommendation to Congress that the United States should own 100 stallions for the purpose of using them with individually-owned mares in order to raise horses for military service, the War Department to have an option on the foals.

Neither do we agree with the Secretary in his statement that there is sufficient difficulty in purchasing horses for army use to cause the raising of horses to be conducted by the government as a military necessity.

It is no part of the business of the government to raise horses for any but experimental purposes; it would simply be an interference, unwarranted by existing circumstances, and demoralizing to horse-raising interests. Some stallion owner would get a fancy price for a stallion that some supposed horse expert would know instinctively to be the sire of artillery horses, and that same stallion would not sire any more artillery colts than if he did not belong to the government. The best stallion the government could select could not sire a colt fit for service under five years, and very likely the colts would be unsuitable.

If the War Department of Great Britain sent over orders for cavalry and artillery horses to the number of twenty-five thousand a year and the money to pay for them at current market values, the army of Great Britain would get them, and in our opinion the annual purchase of suitable horses for the United States government is only a matter of safe and sane business methods.

It has been advanced that they do this thing in Europe. So they do. They also raise kings in Europe; but that is no reason why it should be done in the United States; and the fact remains that most of the horses raised by the army studs in Europe are used by the kings and princes and not by the rank and file of the armies, and those that are raised by the governments of Europe cost considerably more than our government ever had to pay.

Prices of Horses in a Prussian City.

In answer to an inquiry as to the prices of horses suitable for mine work in Frankfort, Consul-General Frank D. Hill reports to the United States Department of Commerce and Labor that horses such as are inquired about are not used in German mines, ponies being used for that purpose. Hanoverian horses of the description mentioned in the inquiry, from five to eight years old, weighing from 1,000 to 1,650 pounds, sell for about $275, and Belgian horses for about $270.

Training Horses.

Anyone having an inclination towards handling and developing horses will find it to their advantage to obtain Prof. Hagerling's book which is advertised in this paper. He is a world-renowned horse trainer and is capable of instructing others in the art of horse training. His address is Belleville, Ill.

The Great Draft Auction.

The Breeders' Sale Company, of Bloomington, Ill., will hold their regular horse sale January 10, 11, 12 and 13, 1911, and it will be a bumper this time, with over 500 head of registered draft horses of the different breeds. They now have seventy-five consignors to this sale, the largest being Mr. H. C. Lowery with fifty head of imported Percheron mares that have been here one year and some State Fair winners among the bunch. Hon. Frank S. West comes next with forty head of imported stallions and mares (Percherons and Belgians.) He has spent many years in the importing business and a long life in the breeding of draft horses. Mr. J. R. Prendergrast consigns twenty-five head of home-bred, registered Percherons of the best size and type that suits most any man that is looking for an ideal draft horse. Mr. L. Banks Wilson has twenty head of imported Percherons, Belgians and Shires from the very best families of their native country. Mr. A. P. Nave with eleven head of registered Percherons of the superior kind. Messrs. Robert Burgess & Son furnish ten head of imported stallions of the show type. Bob knows a good one, and he said he would bring the best in the barn. Mr. Ben Bohlander is in with fourteen Percherons of his last importation of the very best he brought. Mr. E. E. Bernard, the importer from Serena, Ill., with some of his fine Percherons. Pratt & Ridgley with a bunch of their last importation of Percheron fillies. Rowe Bros., of Maple Park, Ill., with ten head of Percherons and Shires. Mr. D. E. Stuart & Co. with a large bunch of Percherons of the right type. Down Bros., with a bunch of their last importation of Percherons and Belgians. Mr. Theo. Ulfers with a large bunch of Shires of his own breeding. Mr. John H. Weaver with part of his last importation and a real good bunch of home-bred ones of the very best type. Mr. W. H. Ritter with imported Percherons and Belgians of his recent importation. D. D. Brotherton with his entire importation of seventeen Percherons of the very best blood lines and with the right size and finish to suit the man that is looking for a perfect draft horse. D. Augstin, John C. Baker, F. M. Smith & Son, Ed Hodgson, A. M. Storm, Levi Dillon, Wm. Rumney & Son, Dodson Bros., Moots Bros., W. C. Baughman, Welch & Peck, and fifty-three other breeders of draft horses, prize winners of their long life experience of breeding the draft horse, are represented in the sale.

D. AUGSTIN, President.

A PERCHERON HEAD.

C. W. HURT, Manager.

They have 125 head of imported fillies, one and two years old, and 276 head of imported stallions and mares with the rest of the offerings bred from the oldest and best breeders of the state to-day. Nowhere else could anyone see a bunch like this—only one place in the United States—and that is at the Fat Stock Show in Chicago, and then they are not for sale at your own bid. Think of 500 head to go to the high dollar.

These horses will be sold in the Coliseum, Bloomington, Ill., that holds 4,000 people, and it is well heated, so cold weather has no effect on this sale, all within three blocks of the very heart of the greatest city of its size in the United States, within reach of some of the very best hotel accommodations that can be had, so attend the great show and horse sale. Sales both day and night. See the largest ever offered at public auction of draft horses in the world, at the beautiful city of Bloomington, Ill. No time now for catalogues. It is time to catch the train.

The dead-sure fire and one-ton-killing-power of UMC cartridges breed that assurance of eye and hand and brain that makes the "one shot kill" habitual with big game shooters.

UMC 100% certainty of results is the same with any standard rifle—because the characteristics of all rifles are provided for in UMC cartridges.

The UMC standard is more than ever the goal of the ammunition world.

I WANT FAIR PLAY.

For 45 years I have fought all forms of trust combinations, have kept my prices down where every farmer could buy a first class scale at a fair price and have protected the dealer. Now the implement dealers largely subsidized by the trusts say that if I sell my scales to a farmer they won't let me sell to any dealer. All right. I am ready for the fight. Hereafter my price is the same to all. Money talks and any responsible man can buy my scales on approval to be paid for on agreed terms at dealers price. Money talks and your request on a postal card will bring you my offer on any kind of a scale that you may want, big or little. Money talks and if you have the money I have the scales and the inclination to fight the trust which says that no man can buy my scales without paying a profit to the dealer. Write me and soon.

UNUSUAL AUCTION.

Sale of 300 Young Mules and 200 Mares, Singly and in Pairs, at the National Stock Yards.

On Friday, February 17th, Campbell & Reid and Western Sale Stables Company, of the St. Louis National Stock Yards, will sell for Guy Crandall, of Townsend, Montana, three hundred mules and two hundred mares.

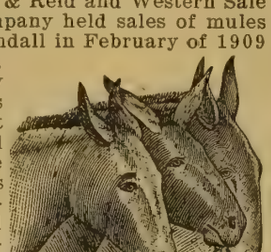
These mules consist of 50 coming two-year-olds, 125 coming three-year-olds and 125 coming four and five-year-olds.

These mules are on feed at Mr. Crandall's ranch and with the mares were selected out of several thousands of horses and mules purchased by him during the past summer and fall.

In picking out these mules to feed and keep for his annual spring sale, great care was exercised in keeping mules that were out of big grade draft mares and had been sired by the very best Missouri and Kentucky jacks with good colors, plenty of size, bone and finish.

The majority of these mules are mares, and are closely matched. They will be sold in pairs and are the equal of the best Iowa, Illinois or Missouri-bred mules of like ages. The two-year-olds are all halter broken, and nearly all of the others are broken to work, and all of them are quiet and gentle.

Campbell & Reid and Western Sale Stables Company held sales of mules for Mr. Crandall in February of 1909 and 1910, and they say the mules turned out well and gave the purchasers great satisfaction, and they guarantee these mules to be sold Friday, February 17th, will be a much better lot than those sold before.



Besides these mules Mr. Crandall will sell on the same day two hundred brood mares from two to six years old, weighing from 1,350 to 1,750 pounds. Among these are fifty of the celebrated Larabie Shire mares of Deer Lodge, Montana. They are all young, and from three-quarters to practically pure-bred Shires, and Mr. Crandall writes that they are as good as grow and fit to compete in any show ring. They have all been bred to an imported Shire stallion that weighs 2,200 pounds. The remaining 150 are high-grade Percheron and Shire-bred mares of extra quality and weight, and all have been bred to pure-bred stallions. All of these mares are gentle and kind to handle, and the majority of them have been broken to harness.

As the mules will all be sold in pairs and the mares single or in pairs, this sale will afford our farmers an opportunity to buy a young pair of mules or brood mares ready to go into every-day spring farm work at wholesale prices and undoubtedly cheaper than can be bought at any other place.

Both mares and mules will be sold under a full guarantee of age, soundness and work qualities by Campbell & Reid and Western Sale Stables Company, and every mule and mare will be sold to the highest bidder.

Any further information may be had by writing Campbell & Reid and Western Sale Stables Company, National Stock Yards, Illinois. Be sure to remember the day of sale—Friday, February 17th, at the St. Louis National Stock Yards.

Steel Shingles Appeal to Farmers.

A trend of the times among modern and up-to-date farmers is to purchase only such building materials as have substantial and long wearing qualities. No better example of this can be found than in the large number of farmers who are roofing their buildings with steel shingles.

The Edwards Manufacturing Company, of Cincinnati, Ohio, makers of Edwards Reo Steel Shingles, report that farmers everywhere are buying this roofing material. The fact that Reo Steel Shingles afford excellent fire protection and are proof against lightning are of course big points in making sales to farmers, but the principal point is that Reo Steel Shingles will outwear four or five cut wood shingle roofs, yet make just as good an appearance on the roof as any other material that can be purchased.

The Edwards Manufacturing Company have just issued a new catalogue No. 157, which contains many interesting facts about roofing. A card to The Edwards Manufacturing Company, 157 Lock street, Cincinnati, Ohio, will bring a copy of this catalogue to any reader of this paper.

FREE TO FARMERS.

By special arrangement Ratekin's big 1911 seed catalogue, with a sample of "Diamond Joe's Big White" seed corn that made 153 bushels per acre, will be mailed free to every reader of this paper who is interested in the crops he grows. This big book tells how to make the farm and garden pay. It's worth dollars to all who plant or sow. Write for it and mention this paper. The address is Ratekin's Seed House, Shenandoah, Iowa.

Butter and Cheese Prices.

St. Louis butter quotations, January 1, 1911: Creamery—Extra, 30c.; first, 28c.; second, 25c.; ladlepacked, 23c.; country make in pails or rolls (packing stock) at 18c. per pound. Cheese: Northern—Twins, 14¾c.; singles, 15c.; Long Horns, 15¾c.; Daisies, 15¾c.; Y. A., 16c.; Prints, 16¼c. Limburger—Choice fall make, 15½c.; summer make, 13 to 14c. Swiss—No. 1, 18c.; No. 2, 16c.; broken, inferior or cracked, 10 to 12c. Brick—Choice, 15 to 15½c.; No. 2, 12 to 14c. per pound.

Elgin quotation, first for January, 1911, at 30 cents, against 36 cents a year ago; 32 cents two years ago; and 29½ cents three years ago.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presence adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

HORSE AND MULE SALESMEN.

HOLLAND, NUGENT & MAXWELL BROTHERS.

Importation of Foreign Meat Into Germany.

It is doubtful whether Germany will long continue to be able to supply the home demand for meat independent of help from abroad. According to a count made October 10, 1910, there was a decrease in Bavaria alone of 230,693 cattle and 96,981 sheep, as compared with the last count. This is not only true in Bavaria, where the population is largely interested in German cattle raising, but also in Hesse-Nassau, where there was a decrease of about 40,000 animals, the decrease being especially noticeable in young animals, so that a further rise in price of animals for slaughter in expected.

In Baden and Alsace-Lorraine the importation of French cattle has already been officially authorized, provided the necessary precautions are complied with. Bavaria and Saxony desire to open their boundaries for the importation of live animals from France. The City Council of Coburg has just decided to order twenty to twenty-five zentner (2,205 to 2,750 pounds avoirdupois) of Danish meat as an experiment. This decision has met with marked popular approval. If Danish meat is imported there should naturally be nothing to prevent the importation of American meats. In fact, the Coburg Board of Trade took favorable action on this matter not long ago.—From Consul-General Frank Dillingham, Coburg, September 25, 1910.

Agricultural Blue Book.

This is our own publication, and is a copyright work of great merit and convenience. It is called **"The Agricultural Blue Book and Live Stock Breeders' Directory."** It is designed to be useful to farmers and to business men in all sections of the country.

The Farming Section.

The Agricultural Blue Book contains 128 pages devoted to names and addresses of live stock breeders, experimental and general farmers, dairymen, horticulturists, etc. This farm list numbers 150 to 180 to the page—about 22,000 in all. All the names and addresses have been carefully verified. In each instance the principal occupation and class of stock raised are stated. It is fully up-to-date and represents the owners of about twelve millions of acres of land, who conduct their own farming operations. In various lines of business the value of this **Agricultural Blue Book** cannot be overestimated.

The Business Section.

At the request of many of our patrons we have included a Business Section, consisting of thirty-two pages. This contains a list of firms who do business with agricultural people. This list is arranged alphabetically by states. It gives the name, address, occupation and class of manufacture, etc. A general farmer, stock raiser, dairyman, poultry keeper, ranchman, fruit grower, will find this book to be valuable and interesting.

Ready For Delivery.

The Agricultural Blue Book is just out and ready for delivery. The size is 6x9½ inches, elegantly bound in blue cloth with gilt title. The price is $2.50 per copy. If the buyer is not satisfied, he can return the book and the money will be refunded. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Horse and Mule Record.

During the year 1910 the largest number of horses and mules received for sale at any market were received and sold at the St. Louis National Stock Yards. The total was 130,116, and the increased receipts were 8,056 head over the previous year. This gain in business was largely due to the firm of Holland, Nugent & Maxwell Bros., horse and mule commission salesmen. This firm sells horses at auction every Monday and Tuesday in the year. Mr. T. H. Holland is the principal auctioneer and head of this firm. They do no buying or selling on their own account, giving all their talents to the service of a large clientage of shippers. The auctions are always well attended by buyers from every section of the country, and they keep them coming in with orders and going out with horses and mules all the time. They also keep their customers well posted from sale to sale, so that shippers make few mistakes in buying. Address, Holland, Nugent & Maxwell Bros. at National Stock Yards, Ill.

Clay, Robinson & Co. in 1910.

The business done by Clay, Robinson & Co. at the St. Louis National Stock Yards during the year 1910 exhibited a surprising increase over the previous year. The total for the year was 3,462 cars sold on the market, and the increase over the previous year was 573 cars of cattle, 614 cars of hogs, and 132 cars of sheep. The hog increase by this firm is remarkable, because there was a large decrease in hog receipts on the general market. There were also decreased receipts of cattle and sheep at the market for the year. Messrs. Clay, Robinson & Co. have an elegant office, full organization of selling force, close communication with other markets, and are absolutely reliable. See their card on page 21.

St. Louis Hog Market.

The year 1910 was closed out with a strong $8.10 top on the St. Louis hog market. The weights of the top-priced hogs averaged 222 to 259 pounds and classed at choice butcher hogs; the plainer grades of packing hogs sold at $7.95 to $8.05 per 100 pounds. Speaking to Mr. F. E. Berry, hog salesman for Clay, Robinson & Co., we asked him for his views concerning the kind of hogs that sell best on the market. He said: "We can sell butcher hogs that weigh 215 to 250 pounds far better than they can be sold at any other market. We can sell them to be slaughtered in St. Louis. We have also the finest demand in the world for light hogs, 150 to 210 pounds. We never have a glutted market." Receipts at the National Stock Yards were over two million head sold in 1910 at the St. Louis National Stock Yards.

Sample Sheep Sales.

Mr. Oscar A. White, who is chief sheep salesman for the firm of Clay, Robinson & Co. at the St Louis National Stock Yards, topped the lamb market on December 21st by selling a deck of eighty-pound lambs, shipped by Files & Johnson, of Lamonte, Mo., at $6.75 per 100 pounds. On that day the sale was 15 cents higher than any other sale. He also sold for Cooper & Harvey, of Clarence, Mo., a deck of sheep and yearlings at $4.50 per 100 pounds, being 35 cents per 100 pounds higher than any other sheep sold on the market. On Saturday, December 31st, he gave The National Farmer and Stock Grower the following range of prices for all grades of sheep and lambs: Lambs, good to choice natives, $6.00 to $6.35; lambs, good to choice Colorados, $6.00 to $6.60; lambs, fair to good natives, $5.50 to $6.00; lambs, fair to good Colorados, $5.50 to $6.00; lambs, common to fair natives, $4.00 to $5.00; lambs,common to fair Colorados, $4.00 to $5.00; lambs, culls, $3.50 to $4.50; good to choice Colorado ewes, $3.50 to $3.75; wethers, good to choice natives, $3.00 to $4.15; wethers, good to choice Colgrades, $3.00 to $4.15; yearlings, wethers (handy weight), $4.75 to $5.25; yearlings, wethers (heavy weight), $4.25 to $4.50; ewes, culls, $1.00 to $2.00—all quotations being at the price stated per 100 pounds.

For Your Protection
These Standard Marks
Our business for fifty years has been the making of solid gold and gold-filled watch cases—not the *works* of a watch, but the *case*. Our trademarks stamped in a watch case have always meant absolute integrity in assay and bullion value.
When you buy a gold watch from a reliable jeweler the chances are that you get one of our cases. If not, then you probably pay the price of our case and get something else.
That is the thing you want to find out.
When a jeweler points to the words stamped inside a case "Guaranteed for 25 years" or "20 years," remember that a guarantee means nothing of itself. Your guide is the integrity of the maker back of the case. Some day there will be a law regulating meaningless guarantees. At present there is nothing to prevent an irresponsible maker from guaranteeing for a period of years a watch case made of base metal and washed with gold.
Every Good jeweler knows our marks and the quality of our cases. They are made for ladies' and men's watches—plain, engine-turned, engraved or enameled. All sizes, all patterns.

FREE TO MILLIONS

A Valuable Little Book Sent Free For The Asking.

Medical books are not always interesting reading, especially to people enjoying good health, but as a matter of fact, scarcely one person in ten is perfectly healthy, and even with such, sooner or later sickness must come.

It is also a well established truth that nine-tenths of all diseases originate with a breaking down of the digestion, a weak stomach weakens and impoverishes the system, making it easy for disease to gain a foothold.

Nobody need fear consumption, kidney disease, liver trouble or a weak heart and nervous system as long as the digestion is good and the stomach able to assimilate plenty of wholesome food.

Stomach weakness shows itself in a score of ways and this little book describes the symptoms and causes and points the way to a cure so simple that anyone can understand and apply.

Thousands have some form of stomach trouble and do not know it. They ascribe the headaches, the languor, nervousness, insomnia, palpitation, constipation and similar symptoms to some other cause than the true one. Get your digestion on the right track and the heart trouble, lung trouble, liver disease and nervous debility will rapidly disappear.

This little book treats entirely on the cause and removal of indigestion and its accompanying annoyances.

It describes the symptoms of Acid Dyspepsia, Nervous Dyspepsia, Slow Dyspepsia, Amylaceous Dyspepsia, Catarrh of Stomach and all affections of the digestive organs in plain language easily understood and the cause removed.

It gives valuable suggestions as to diet, and contains a table giving length of time required to digest various articles of food, something every person with weak digestion should know.

No price is asked, but simply send your name and address plainly written on a postal card to the F. A. Stuart Co., Marshall, Mich., requesting a little book on Stomach Diseases and it will be sent promptly by return mail.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Farmer as a Poultry Raiser.

In the United States the farmer leads as a poultry raiser. He has all the advantage of the professional raiser of poultry, except in the nearness to the retail market.

This is largely because he has a large area of land that is but lightly farmed over. In the main, the methods of the American farmer are extensive and not intensive. He has much land over which poultry can rove and find much of its own food. On his land is a wealth of green things growing, which also serve as food for poultry.

The waste on the American farm is great, and the poultry help redeem much of this waste. The writer knows of one farmer that has 200 hens. Every year after threshing time those fowls are working assiduously in the chaff where the threshing was done, and they save a large amount of the lost grain.

Then on the American farm are many unmarketable products that are worked over into poultry food and thus make these products available and marketable. The farm cows yield a large amount of by-products in the form of skim milk and sour milk.

These things make the American farmer the leader in the production of poultry. And more and more we find attention being paid to this very important side issue.

The first great fault of the American farmer as a poultry raiser has been the overfeeding of his poultry. One farmer said: "I have the fattest hens in the county and they lay the fewest eggs of any hens in the county." He had permitted his numerous hens to have access to the ground just under his corn cribs, and every time he went to the corn crib he threw out a shovelful of corn on the ear. This was in addition to the loose corn that rattled down onto the ground every time he took a load to market. His hens had nothing to do but to fill up on corn and then stand around and rest. It is taking a good deal of talk to stop this kind of feeding, as it is the easiest way to do this part of the work. But fat and egg production do not go together.

A visit to many of our farms will show that a new era is beginning in the raising of farm poultry. At last the value of the bone mill is being appreciated. If there is one thing that should not be neglected in the feeding of farm poultry it is the ground fresh bones, which make such a valuable food for growing and laying fowls. Moreover, this kind of food is still abundant and cheap.

The high prices at which turkeys have been selling of late years have been a stimulus to that part of farm poultry raising. The extensive American farm is about the only place suitable for the production of turkeys, which are still so wild that they will not endure confinement. The American farmer thus has a monopoly in the raising of turkeys, and several hundreds are produced on some farms each year.

The old days of hit-or-miss poultry raising on the farm is passing. More science and better results are evidenced by the constantly increasing volume of poultry products flowing to the markets in the cities and villages.

Poultry and Pet Stock.

The American Poultry Journal says: "Those who make the most out of the business generally start in with small beginnings and expand as they learn to use what they find to be the essentials. A few hundred dollars invested in suitable buildings and breeding fowls should be enough to start anyone who thinks the qualities of a poultryman are fused within him."

"How to Kill and Bleed Market Poultry" is Circular No. 61, Bureau of Chemistry, United States Department of Agriculture. The intention of the circular is to assist dressers of poultry to improve the market stock by correct methods of killing and bleeding. Frequently imperfect bleeding is the factor that hastens the decomposition of dressed fowls. The circular will be sent free by application to the Secretary of Agriculture, Washington, D. C.

The hen is the most finished producer. A Leghorn hen weighing 3½ pounds, lay 200 eggs, weighing 25 pounds, in one year. She multiplied the dry substance in herself five and a half times.

We hope our readers will send for the incubator and brooder catalogues advertised in this paper. The incubator is absolutely necessary to successful poultry farming.

The American Poultry Advocate pertinently remarks that poultry and dairy farming go well together. In fact, milk fed to poultry in all forms produces good results. Milk fed to poultry in the fattening pens demand a fancy price over other fed poultry.

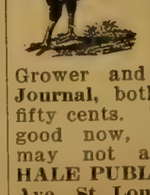
Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



The Case of the International Harvester Company in Missouri.

We understand that the International Harvester Company is in danger of being ousted from the state of Missouri on technical grounds of small consequence. One of them is that the capital stock is too large to fit the Missouri standard for companies organized in other states, and in order to do business in Missouri the organization used a subsidiary company of the same name as selling agents. Another is that the consolidation by the International Harvester Company of the properties of the other companies was a combination and not a sale of one to the other, and technically in violation of Missouri statutes. Therefore the matter is up before the Supreme Court for final decision as to the extent of the penalty to be imposed.

The National Farmer and Stock Grower, in its own interest, has no desire to see the agricultural implement business absorbed and monopolized by the International Harvester Company; indeed, the question has been raised by ourselves as to our conduct towards the said company, just as it has been raised before the courts of the state of Missouri, and, having arrived at a decision in regard to the subject, have no hesitancy in making it known.

In our opinion, the question whether the International Harvester Company has a right to do business in any particular state is too narrow. The real question is: "Has the International Harvester Company a right to do business in the United States?" In the absence of any contrary decision we have decided that it has. The Missouri limit of ten million dollars capital for industrial companies organized in other states, if applied as in this case, would deprive the state of many benefits. Many companies with capital in excess of ten million dollars are selling goods in Missouri. We have a dry goods store in St. Louis capitalized at five and a half millions, and companies requiring ten million dollars capital for legitimate operations are not unusual. The ten-million-dollar limit is decidedly too low.

It is believed by us that the International Harvester Company is founded upon true business principles. When the question was raised as to the legality of the organization, the President of the International Harvester Company invited the government officials to point out legal defects, if there were any. He said: "If it is not right, show us how to make it right." Engaged in an honest business, why should it be destroyed? Four thousand or more of their workmen are partners in the business, free American citizens. Why should their products be unsalable in Missouri? Since the International Harvester Company was organized there have also developed and grown up a dozen great agricultural implement manufacturing establishments, and there is more competition in the trade than there ever was before; then why should the law force one grand organization out of business when one hundred million people of the United States are furnishing business for them all?

In the present day the manufacturing interest of the United States of America is no kindergarten proposition. We are in competition with the world. Large business organizations which furnish employment for thousands of people are absolutely necessary. They are not to be rustled from state to state until they take their capital, their machinery, their men and their processes to other countries. What we need is a national corporation law, under which any corporation properly organized can do business in any state, and one that if improperly organized can be prevented from going into business in the first place.

Since the legal proceedings against the International Harvester Company were instituted we have read as much of the testimony as we could obtain. The commissioner before whom the testimony was taken finds no evidence of any exorbitant prices or injurious treatment of competitors. On the contrary, he finds that the prices have been reasonable, machines furnished have been improved, and in a general way there is no substantial charge against the company in regard to selling methods. So far as the practical effect of the organization of the Harvester Company is concerned, or so far as anything which the company has done in Missouri is concerned, nothing but good has resulted; its prices, its method of business, its dealings with the farmer, the dealer and the public have been without reasonable objection. Our business as a publication is directly with farmers more largely in Missouri than in any other state, and, so far as we know, the company has a clean record.

If the International Harvester Company is ousted from Missouri it may leave the field easier for competitors, but we have no sympathy with laws or processes operating in favor of one company and at the same time destroying another. Companies, like individuals, should have equal rights before the law, and in the absence of criminal misconduct such a punishment as ousting a company from the state on technical grounds is like hanging a man for a misdemeanor.

If the International Harvester Company is debarred from doing business in the state of Missouri, it will be just as technically unlawful for the owners of about 100,000 harvesting implements to obtain the necessary repairs for their own implements and machines of the International Harvester make. They will certainly have to deal with some middleman at increased prices. This will be punishing the innocent.

The main reason why we write upon this subject favorably in regard to the International Harvester Company, is, that it is an open and above board line of manufacture, from the manufacturer to the consumer, without disguises. The trade mark is on all their implements; they are not hiding behind any bush. The Plano is still Plano. The McCormick is still McCormick. The Deering is still Deering. If a farmer does not wish to buy from the International Harvester Company, there is no danger of his getting one of their implements. Not so with us. We do not know who manufactured the paper on which The National Farmer and Stock Grower is printed. We buy from an agent. The manufacturer is unknown and will not sell direct to the consumer. There are weight limits, trade limits, territory distribution, etc. It is the same with leather; the buyer does not know the seller; he only knows that if he pays the price he gets the leather. The great state of Missouri is able to oust the manufacturer of agricultural implements that is doing an open business with a trade mark, but is not able to oust the middleman who represents the companies which sell unbranded goods and which are controlled by unlimited capital.

We believe that the stockholders of the International Harvester Company have the rights of trade equal to any other citizens, and to deprive them of such rights would establish a precedent which would render business enterprises unsafe in any community.

POTASH PAYS

DO NOT DELAY! *Order Your Potash Now*

Every spring there is less potash in your local market than the farmer needs and wants to buy. There is a reason for this. You expect to order potash with the other fertilizers, forgetting that potash must come some four thousand miles. This takes time.

Those who want to insure arrival in time, place their orders as early as October to permit shipment before the German rivers are frozen. Late orders are subject to more risks and delays.

Arrange for your dealer to place his order now so as to be sure of a supply. If he does not handle it write us for prices direct from the mines to you.

Do not forget that the longer you have used phosphate the greater is the present potash need and profit.

GERMAN KALI WORKS, Continental Bldg., Baltimore, Md. Monadnock Block, Chicago, Ill.

[Please mention National Farmer and Stock Grower.]

Aged Sows the Best For Breeding.

"An investigation at the Iowa Experiment Station to discover the influence of the age of sows upon their prolificacy and the weight and growth of the pigs they produced gave some interesting results. It was found, for example, that fifteen sows bred at eight or nine months averaged seven and two-thirds pigs per litter, while fourteen sows twenty-four months old averaged nine and six-tenths pigs per litter and aged sows averaged ten and six-tenths pigs per litter. Pigs from the younger sows weighed on an average of 2.39 pounds per pig; from the two-year-old sows 2.63, and from the aged sows 2.61 pounds. When about six weeks old the pigs from the young sows made an average daily gain of .32 pound, while the pigs from the two-year-old sows gained .40 pound. No data is given on the gain of the pigs from the aged sows.

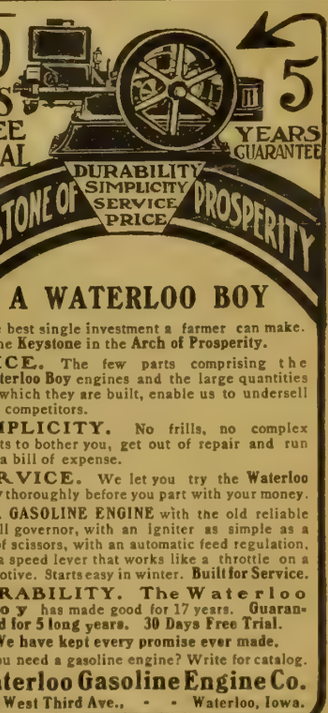
"Stated in another way, it was found that the two-year-old sows farrowed 24 per cent. more pigs than the young sows, while the old sows farrowed 30 per cent. more. The weight of the pigs from the two-year-old sows was 9 per cent. greater than that of the young sows, while the pigs from the old sows were 12 per cent. larger than from the young sows. The pigs from the two-year-old sows made a more rapid gain than those from the young sows, amounting to 26 per cent. In each instance the older sows farrowed more pigs per litter, heavier pigs at birth, and their pigs made the most rapid growth after birth."—From Coburn's "Swine in America."

The Manure Spreader.

Missouri farmers to the extent of only one and a third per cent. own automobiles, but seven and a half per cent. own manure spreaders. The late David Ranken, successful to the last degree as a farmer, who kept up the fertility of the soil, said: "The manure spreader must be freely used. I regard it as one of the machines that grinds out money for me." The example of David Ranken is a good one to follow.

The Trend of Commerce.

The foreign commerce of this country is increasing, not by the export of food stuffs, but by the increase of manufactured goods. Exports of bacon, wheat, flour, cattle and fresh beef are decreasing. Exports of agricultural implements, upper leather, scientific instruments, automobiles, metal working machinery, builders' hardware, tools, rubber, etc., are increasing.



A WATERLOO BOY

is the best single investment a farmer can make. It's the **Keystone** in the **Arch of Prosperity.**

PRICE. The few parts comprising the **Waterloo Boy** engines and the large quantities in which they are built, enable us to undersell our competitors.

SIMPLICITY. No frills, no complex parts to bother you, get out of repair and run up a bill of expense.

SERVICE. We let you try the **Waterloo Boy** thoroughly before you part with your money.

A GASOLINE ENGINE with the old reliable fly ball governor, with an igniter as simple as a pair of scissors, with an automatic feed regulation, with a speed lever that works like a throttle on a locomotive. Starts easy in winter. **Built for Service.**

DURABILITY. The Waterloo Boy has made good for 17 years. **Guaranteed for 5 long years. 30 Days Free Trial.**

We have kept every promise ever made.

Do you need a gasoline engine? Write for catalog.

Waterloo Gasoline Engine Co.
228 West Third Ave., - - Waterloo, Iowa.

THE 500 QUESTIONS ANSWERED.

This is all about swine, and is a book by L. H. Cooch. There are 526 questions and 526 answers. They are natural questions and practical answers. The questions relate to breeding, mating, feeding, pasturing, fattening, management, diseases, etc., of swine. It is a complete veterinary authority on all swine diseases. The answers to questions on feeding alone, if properly attended to, will put enough pounds on one pig to pay for many books. We are sending The National Farmer and Stock Grower for one year and the 500 hog question book for 60 cents. Address, Hide Publishing Co., 3500 Vista Ave., St. Louis, Mo.

Water For the Dairy Cow.

It is very important that the water drunk by the cows giving three or more gallons of milk daily be warmed to about sixty degrees. Otherwise the cows will not drink as much as they need to keep up a good milk flow. It does not take much ice water to chill a thin-fleshed dairy cow through and through on a cold winter day, especially when she is compelled to walk some distance through the snow or cutting wind to get to the tank or pond.

Experiments made at the Missouri Station show that drinking water is needed in proportion to the milk yield. That is, a cow giving six gallons of milk a day needs about twice as much water as a cow giving three gallons a day. If the water is too cold to be comfortable if drunk in large quantities, the cow will not drink enough, and as a result will drop considerably in her milk yield.

When Missouri Chief Josephine was giving about 100 pounds of milk each day last winter she drunk daily about thirty-one gallons of water. Imagine how she would have suffered if that had been ice water. It was warmed, however, and Josephine did not chill after drinking.

A good tank heater or some other device should be used this winter to warm the water for the cow. It will pay.—H. E. McNatt, Dairy Department, University of Missouri.

Blooded Stock.

Mr. D. F. Beauchamp, of Meredosia, Ill., reports a good trade in Poland-Chinas. He raises very fine, robust pigs of high breeding and quality, and has no difficulty in selling them at reasonable prices.

Buyers of jacks and jennets should be sure to get a catalogue and price quotations from Mr. Thos. H. Ezell, proprietor of Mill Creek Stock Farm, R. F. D. No. 7, Nashville, Tenn. This is a famous breeding establishment, and Mr. Ezell will sell some of his own raising at fair prices to the buyer.

Mr. R. Breininger, of Monroe, Ind., an old and valuable customer of this paper, has a fine lot of Duroc-Jersey gilts for sale which will come cheap and profitable to the buyer.

Please note change in card of Mr. Gaius Paddock, R. F. D. 1, Moro, Ill. His elegant homestead in Liberty Prairie is one of the best and oldest in the state. The Shropshire sheep, Chester White pigs and Poland-Chinas are of his own raising from some of the best stock in the country. His farm is convenient if anyone desires to pay him a visit and look over his stock.

Mr. T. W. Graham, of Myrtle, Miss., owning a plantation in Mississippi, on the 'Frisco Route, in Union county, contemplates buying some pure-bred Duroc-Jersey, Poland-Chinas and Tamworth swine. Anyone in shipping distance may find it to his advantage to communicate with Mr. Graham.

Barham Son & Butler, of Milan, Tenn., have mules for sale in car lots or less. They also have saddle horses of their own raising and selection and a few good walking horses. They are in first-class territory for high class horses and mules and safe people to contract with.

Record Cattle Prices.

We are glad to announce to our many good friends and customers that we obtained the summit for the year on cattle at the National Stock Yards by 10 cents per 100 pounds, selling on June 8th for Oswald Bros. & Robein, of Booneville, Mo., twenty steers, branded Westerns, good quality and fat, averaging 1,580 pounds, at $8.60 per 100 pounds. This is the highest price by 10 cents per 100 pounds that any cattle have sold for on this market in fifteen months. These cattle were fed by E. Schlotzhauer, of Pilot Grove, Mo. We also sold on the same day four cars of native Missouri cattle, fed and marketed by Wilcox & Littrell, of Renick, Mo., averaging 1,574 pounds, at $8.50. This price equals any other sale made on the market here this year. While we have been located here less than two years, these prices show that we are making "Sales that Suit," and also shows that the packers are good buyers on this market, as these prices are within 15 to 25 cents per 100 pounds of the extreme top of the Chicago market for the year.—Clay, Robinson & Co., live stock commission, National Stock Yards, Ill.

The Leading Vegetables.

Potatoes selling in car-load lots at St. Louis: Sacked Wisconsin White at 45 to 46c. a bushel; Michigan Rural, 47 to 49c. Onions—Choice to fancy sacked Red Globe at 85 to 90c. per bushel; sacked yellow at 75 to 80c. per bushel. Cabbage— Domestic at $9.00 per ton on track, and New York Danish in bulk at $12 and in sacks at $14, delivered. On orders, 1c. per pound for New York Danish. Sweet potatoes—Home-grown Yellow and Red Nansemond at 90c. to $1.00; Queen at 80 to 90c.; Bermuda at 65 to 75c. per bushel box, loose. Horseradish — Home-grown, loose, from wagons at $4.00 to $4.50 per barrel —$4.50 to $5.00 per barrel charged on orders.

CREDIT SUBSCRIPTIONS.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

F. J. Hagerling, Belleville, Ill.

Plenty of Cheap Potash.

A misapprehension evidently exists regarding the danger of a shortage of potash for the American farmer. This has arisen through a misunderstanding of the purpose of the new German potash law. This law does not aim to restrict the production of potash, but, on the contrary, expressly seeks to increase it. The commission that fixes the probable yearly demand of the world must provide each year for an increase over the consumption of the previous year. The mines have spent millions of dollars in trying to increase sales, and this policy will continue.

The commission is required to annually estimate the domestic (German) requirement and the amount needed for export. Because it happens that the present German requirement is equal to the export needs, some have understood that the law forbids an export quantity greater than the German consumption. This is by no means true. The Germans are only too glad to have the foreign demand increase.

The law in this respect is flexible; thus, if the commission should find that the German and export amounts for 1910 were practically equal, they would fix the same proportions for 1911, increasing each in the same amount. However, should it appear at any time, say in February or March, 1911, that the foreign orders were likely to be in excess of the amount estimated, the commission has the power to at once make the foreign allowance greater than the domestic, and would undoubtedly do so.

This is quite in line with the purpose of the mines in organizing their own company in America, the object of this American company (German Kali Works) being to sell as much potash as possible to everyone, farmer or dealer, at reasonable prices and to aid all willing manufacturers and dealers in their efforts to supply the farmers' potash requirements. To this end they carry extensive stocks of potash, especially in South Atlantic ports, and take orders for direct importation in single car-load lots. Any farmer can import direct through South Atlantic ports a car of kainit and have it put on board the cars, bagged, tagged and all taxes paid for nine dollars per ton cash. Prices to jobbers and mixers are lower by the usual margin fixed by the manufacturers in the past.

St. Louis Feather Quotations.

By the pound: Prime white live goose in small sacks, 59c., and in large sacks 57c.; prime gray do., 42c. in small and 40c. in large sacks; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10c.; xxxx, 3c.; mare, 10 per cent. on small sacks and 7 per cent. on large. Duck—White, 31c.; dark, 30c. Chicken—Prime dry-picked body, 4c.; wet, damp and quill-mixed, 2c. Turkey feathers—Wing, tail and pointers mixed, 14c.; body, 4c.

Average Mule Quotations.

At the St. Louis National Stock Yards, opening market of January, 1911, the following were quotations for the sale of mules: 14 hands, $75 to $145; 14½ hands, $92.50 to $157.50; 15 hands, $117.50 to $192.50; 15½ hands, $135 to $225; 16 hands, $150 to $275.

It is reported from Glasgow, Ky., that quite recently seventy-five mules have been sold at an average of $200 per head, with a pair for $526, as the leading features of the trading in mules in Barren county.

Piles Quickly Cured at Home

Instant Relief, Permanent Cure — Trial Package Mailed Free to All in Plain Wrapper.

Piles is a fearful disease, but easy to cure, if you go at it right.

An operation with the knife is dangerous, cruel, humiliating and unnecessary.

There is just one other sure way to be cured—painless, safe and in the privacy of your own home—it is Pyramid Pile Cure.

We mail a trial package free to all who write.

It will give you instant relief, show you the harmless, painless nature of this great remedy and start you well on the way toward a perfect cure.

Then you can get a full-sized box from any druggist for 50 cents, and often one box cures.

Insist on having what you call for.

If the druggist tries to sell you something just as good, it is because he makes more money on the substitute.

The cure begins at once and continues rapidly until it is complete and permanent.

You can go right ahead with your work and be easy and comfortable all the time.

It is well worth trying.

Just send your name and address to Pyramid Drug Co., 92 Pyramid Building, Marshall, Mich., and receive free by return mail the trial package in a plain wrapper.

Thousands have been cured in this easy, painless and inexpensive way, in the privacy of the home.

No knife and its torture.

No doctor and his bills.

All druggists, 50 cents. Write today for a free package.

Variations For Cake.

A cheap filling for cake which is much enjoyed is one cup of sweet milk; put half of this on the stove to scald and into the other half mix two tablespoonfuls of sugar and a heaping spoonful of flour or corn starch. If the sugar and flour are mixed before putting into the milk there will be no trouble from lumps. Stir the mixture into the milk when it boils. It should be a creamy mass when scalded. Flavor to suit the taste. Let it partly cool before placing on the cake.

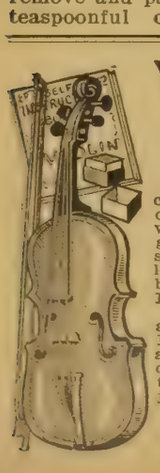
If a chocolate layer cake is desired, this makes an excellent filling by adding grated chocolate to the milk and cooking until entirely dissolved.

A soft frosting without eggs may be made by cooking one cupful of sugar with half a cupful of sweet milk. Cook until it "hairs," then remove and partly cool, stirring in a teaspoonful of corn starch. The addition of cocoanut is a pleasant change from the plain frosting.

One busy woman who always kept three kinds of cake on hand for unexpected company explained the secret of her method:

She always made both dark and light cake at the time as an economy in using both the whites and yolks of the eggs. It was baked in a long pan—the white at one end, the dark at the other, and a marble cake in the middle, by the blending of the two kinds, putting them in a spoonful of each alternately. The effect on her table of the three kinds was most pleasing and no one would suspect that they were all baked in the same pan.

If you are fond of cake, select for common use a simple recipe. This can be varied to relieve monotony. Once it may be made with brown sugar and flavored heavily with spices; again, raisins may be added; another time nuts; or canned fruit may be added to the cream filling. Even a slight variation will prevent the family from tiring of it.—Bessie L. Putnam.



VIOLIN FREE

This is a fine, handsome, clear toned, good sized Violin of highly polished, beautiful wood, ebony-finished pegs, finger board and tail piece, one silver string, three gut strings, long bow of white horse-hair, box of resin and FINE SELF-INSTRUCTION BOOK.

BLUINE MFG. CO.,
1275 Mill Street,
Concord Junction, Mass.

Live Stock Judging by Missouri Students.

On November 26, 1910, the Live Stock Judging Team from the University of Missouri won the International Live Stock Judging Contest and broke all previous records for individual score and total team score, making a total score of 250 points more than the team next best.

The winning of this contest brings to the University of Missouri a beautiful trophy valued at $500. With the awarding of the highest individual honors to W. R. Heckler, of Missouri, the University is awarded a beautiful loving cup valued at $150.

A remarkable feature of this contest is the fact that the three highest individual scores in the contest were made by Missouri students, and a fourth man tied for fourth highest score, while the fifth Missouri student ranked eighth.

In other words, every member of the Missouri team was in the honored list of the ten highest men and each made a score higher than the best record of any previous year.

The Missouri team was:

First in grand total	5,379
First in horse judging	1,280
First in cattle judging	1,418
First in swine judging	1,384
Second in sheep judging	1,297

The winning of the above entitles the Missouri Agricultural College to four J. Ogden Armour Scholarships, which amount to $250 each, and are to be awarded to needy students in the College of Agriculture.

This is conceded to be the most remarkable victory ever won in a stock judging contest by any institute.

On November 22 the same Live Stock Judging Team from the University of Missouri won the Saddle Horse Judging Trophy, a beautiful silver loving cup, valued at $100 and offered by the American Saddle Horse Breeders' Association. The three highest individual scores in this contest were made by Missouri students, a fourth Missouri man being tied for fourth place.

Hot Bed Mats.

A good supply of these should be made during the winter. Many materials are used. Rye straw and marsh grass are in common use. Rushes from the swamp are good. Willow cuttings have been tried. Any material should be well cured and not rotten. Anyone can weave the mats without experience. Simply make a frame of the desired length and knot stout cards in place on it, then weave the materials in and out, back and forth.

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send **you, your daughter, your sister, your mother, or any ailing friend,** a full 50 cent box of Balm of Figs Compound **absolutely free.** It is a remedy for the treatment of **woman's ailments,** and I want to tell you **all about it**—just how to use it yourself—right at **home** without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—**let me prove it to you,** and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so **quickly** and **surely** cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with **any form of female weakness or diseases so common to women.**

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to **prove** my faith by sending out these **50-cent boxes** free. So, dear reader, irrespective of your past experience, write to me **at once — today** — and I will send you the treatment **entirely free** by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the **very best test** of anything is a **personal trial** of it, and I know a 50-cent box of Balm of Figs Comcound will **convince you** of its merits. Nothing is **so convincing** as the **actual test** of the article itself. Will **you** give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a **50-cent box of this remedy absolutely free.** Address,

MRS. HARRIET M. RICHARDS, Box C 223, JOLIET, ILLINOIS

Fancy Prices For Poultry.

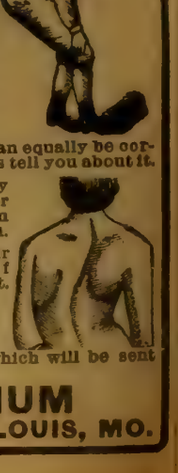
Ninety-nine times in a hundred when a would-be poultry fancier buys a trio of birds at a fancy price he gets no more than he could just as well obtain for a five-dollar bill. Quality in chickens consists more largely of appearance and assertion than anything else. The show-yard standards are not based either upon early maturity, economy of production, egg laying or meat excellence, but upon feathers, types and appearances. In the business of cattle breeding the beginners usually assemble a herd of pure-bred animals of moderate cost and quality, and by purchasing males of superior breeding and excellence they hope to improve the value of the herd. The cattle raiser is assured of the ancestry of every animal he buys and knows exactly what to expect in the matter of meat production; but the poultry amateur has no positive assurance of ancestry or performance, or even that the asserted qualities and characteristics are sufficiently fixed to be transmitted; therefore he is usually buying the unknown. Every beginner in poultry raising should get a start from an established breed and breed upward if he can find a better standard; but he should be careful not to start in extravagantly without experience and inevitably breed downward. The safest way to proceed is to first learn how to raise healthy chickens; then for improvement purposes high-priced cockerels and pullets may be purchased with some prospect of their being worth the money. The poultry raiser who pays the market price of 500 dozen eggs for one male ought to know more about the bird he is buying than the seller is usually able to guarantee.

Square Deal Seeds.

Every farmer will be interested in the new seed catalogue just issued by R. H. Shumway, Rockford, Illinois. It contains hundreds of beautiful illustrations and is a perfect mine of information on all kinds of garden and flower seeds. Mr. Shumway has built up an immense business by giving every customer a **fair deal** and selling **good seeds cheap.** Send for his catalogue to-day and kindly mention The National Farmer and Stock Grower.

"Past and to come seems best; things present worse."—King Henry IV.

DEFORMITIES CURED!



CROOKED OR CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operations, and the result is guaranteed.

POTTS DISEASE when treated in time will result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases make complete recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and references.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can equally be corrected. No surgical operations or confinement. Let us tell you about it.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, practically helpless from Infantile Paralysis, were restored at this Sanitarium.

DEFORMED KNEES OR JOINTS yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

L. C. McLAIN SANITARIUM

916 Aubert Avenue ST. LOUIS, MO.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Overindulgence.

This is apt to be the stumbling-block of the fond mother, the point at which she errs. Yet lack of strength on her part, or inordinate affection, as you choose to call it, may be the means of dwarfing that most important characteristic in the child—self-reliance.

One mother was wont to say that she could not teach her daughter to work, "for then she would never be obliged to work." The girl grew into womanhood as the mother desired, with white hands which knew not toil. She married an intellectual, well-educated man—but there let the story end. It suffices to say that he was not so situated as to hire a maid, and so was compelled to serve in this capacity himself. Can we believe that such an education for a girl is ever conducive to happiness?

A little child undertook to make a sunbonnet for her doll, but found one difficult place which she could not get over. She took the work to her mother and asked that help be given over the one point. Then, wearied with sewing, she went out to play, while it was being done. But she stayed too long. And the mother, with all the tenderness of mother-love, strove to encourage the ambitious child by completing the bonnet.

Her sorrow was for a time inconsolable. She had wanted to do the work herself; had not asked or wanted assistance save at the one point; and this was only asked after she had found her own ability inadequate.

It is unwise to help where help is unnecessary. Had the child stayed by and watched the process she would have been independent another time. But mother no doubt realized that she had puzzled over the problem until tired. Her voluntary help was with the kindest intentions; but it was too much to draw out self-reliance; and in the instance quoted it had even crippled the independence already present. Help when help is needed, but guard against curbing the best of all help—self-help.—Bessie L. Putnam.

The Farmer and General Education.

There is no place in the world where education is of more value than on the farm. The business of farming is one that allies itself with the highest forms of education.

General academic education is the most valuable kind of education, because it is the foundation of all other education and of all development. By academic education is meant the ordinary kind of education that was being taught in our schools before vocational or trade instruction came in. These vocational studies are excellent, but they can never take the place of the older form of instruction, which is the foundation of all.

Thus, in the academic studies we find botany and chemistry, both of which must be understood if the farmer is to get the best out of his land and his efforts. Chemistry especially appeals to the farmer that wants to keep up the fertility of his acres or restore fertility to the acres whose fertility has been lost.

Chemistry also is needed in the kitchen of the farmer, so that his food may be properly balanced. Chemistry is needed in the barn of the farmer, that his rations for stock may be the most effective possible, and so that the greatest amount of food may be saved in the compounding of rations. The non-understanding of chemical facts has caused the loss of hundreds of millions of dollars to American farmers through the improper compounding of rations, to say nothing of losses in other departments of the farm.

Chemistry is needed by the farmer in the understanding of the soils with which he is working. The farmer that has a good working knowledge of chemistry will be able to handle his land as no other man can. If he wants to know what kind of stuff composes his soils and subsoils he will not have to send to a far-away chemist to find out.

More and more the farm is becoming dependent on certain facts that belong to botany, such as the development of the low forms of life we call bacteria. This enters now largely into the growing of his leguminous crops. They also enter into his sanitary arrangements on the farm. Ignorance of germ life, as represented in diseases, has caused the prevalence of long periods of sickness, which are always expensive to the farmer and sometimes ruins his year's work.

The farmer can expect to get this kind of education only in the schools, and the High Schools at that. So every locality should have access to a High School supported by the township. In fact, the lower grades are not the places for such studies.

Hitherto our farmers have regarded the little red school house as supplying all the needs for education in the country. But we have now entered on days when more general education is needed. Our sons will have to be better posted than we are ourselves.

There is no good reason why farmers' families should not have in them as much education as is to be found in the families of the dwellers in the cities, and in the cities High Schools are numerous, and a knowledge of chemistry, botany and other like sciences is becoming widely diffused.

$1,600 a Year From One Acre

A man in *Southern California* owns and lives on one acre of ground. Around the acre is planted a row of fruit trees from which he realized $400. From one-quarter of an acre of strawberries he made $200. On the remaining ground he raised vegetables. California has a year 'round growing season—he sold $1,000 worth in twelve months. In addition he kept many fowls; all money makers.

Illinois Housekeepers to Meet.

The attention of the housekeepers of the state is hereby called to the School For Housekeepers to be held in the Woman's Building of the University of Illinois for two weeks, beginning January 16, 1911. This school has been held annually for six years with a steady increase in the attendance. Last year 175 women availed themselves of this opportunity to discuss the problems of the home, to exchange their experiences in it and to get whatever of help the department could offer, and suggest ways in which it might be more helpful to them.

Many of the lectures given in the College of Agriculture during this period are of interest to women, as it is really a splendid time to see the University and secure the helpful information along many lines. The work of the School For Housekeepers consists of lectures, demonstrations and class work in cooking, sewing, house planning and furnishing, care of home grounds, cultivation of flowers and vegetables.

The programme, showing the work of each day, will be issued later.

Information concerning board and room should be addressed to the Young Women's Christian Association, corner Wright and John streets, Champaign, Ill. Requests for programmes and information concerning work offered should be addressed to the Department of Household Science, University of Illinois, Urbana.

For Pea Shovelers.

In the fair and hitherto obscure village of Narzilles, Ill., lives a genius who has suddenly burst into lasting fame. It is said that he has invented a pea that is guaranteed not to roll off a knife. It seems incredible that this should be, but we no longer doubt anything. This pea is a variety of garden product so developed that inside it is a gyroscope that maintains it in resolute stolidity. The most voracious pea shoveler that ever wielded a knife can work with this pea in absolute confidence. Thus we herald the dawn of a new day in the beginning of a new era in gustatory art.—Kansas City Journal.

MOVING PICTURE MACHINE
GIVEN FOR SELLING POST CARDS

This marvelous Machine shows pictures in motion the same as the very expensive machines used in theatres. With this machine you can entertain your friends and even make money giving exhibitions. We give this wonderful machine complete with films—63 VIEWS, for selling 24 packages high grade 1 post cards at 10c per package. SEND NO MONEY. Write for post card today. When sold, send us $2.40 and complete Moving Picture Machine and 63 Views will be sent you promptly. SATISFACTION GUARANTEED or MONEY RETURNED.

PROF. SAMUELS ORIGINATES PECULIAR METHOD OF TREATMENT

HIS PHENOMENAL SUCCESS CAUSES ENMITY OF DOCTORS

ARRESTED MANY TIMES

Patients Make Startling Statements of His Successful Method of Treating Consumption, Bright's Disease, Kidney Trouble, Blindness, Fits, Catarrh, Heart Disease, Cataracts, Nervous Prostration, Dropsy, Hay Fever and Many Other Diseases That Baffle the Skill of the Ordinary Physician.

WICHITA, Kas.—The almost miraculous cures of hopeless invalids made by Professor Samuels, of Wichita, Kas., have been of such a startling character that they have aroused widespread wonder, admiration and curiosity. Time and again he has taken cases pronounced hopelessly incurable by the medical profession and restored the patients to health in a most phenomenal manner.

Professor Samuels came into note several years ago by his almost miraculous cure of "Blind Joe," of Topeka, Kas., who was well known in that city, having sold peanuts and popcorn on the streets there for years. He had been blind for ten years and had exhausted all the means in his power to be cured, but had given up in despair until he fell into the hands of Professor Samuels, who effected a cure.

Professor Samuels has been arrested many times for practicing his system without having a diploma. On being interviewed a few days ago relative to his many arrests, Professor Samuels said:

"Yes, I have been arrested many times for practicing without a license, but in no case have I been convicted. Naturally, the medical profession are jealous of my success, and are fighting me most of the time, but how are they going to convict me? Do you suppose any jury, when my patients come into court, as they did at Alva, Okla., Newkirk, Okla., Ponca City, Okla., and other towns, and tell how they have been cured of all manner of trouble, do you suppose for a minute that any jury hearing these people and seeing with their own eyes what has been been accomplished, is going to convict me? My trial at Alva was before a very able judge, Jesse J. Dunn, who is now chief justice of the state of Oklahoma; after hearing the evidence for and against me, I was acquitted.

The professor here showed a reprint from the court records showing the proof of his assertions that the court had not convicted him.

"What is the nature of your treatment?" was the next question.

"That is a secret that has taken many years of my life to accomplish. I can only say that my results are obtained treating disease by dropping a colorless liquid, which I prepare, into the eye. Strange as it may seem, so-called incurable cases of consumption, Bright's disease, dropsy, epileptic fits, nervous prostration, are treated in this apparently miraculous way. My system is based absolutely on scientific principles. The eye is the window of the soul. I have evolved a system of treating other bodily ills based on the relation of the eye to the system as a whole. This may seem strange, but here are the proofs."

Thereupon the professor placed before his interviewer his "Message of Facts," affidavits and letters in great numbers, many of them from responsible and well-known people, all bearing out his statements.

This proved that Mr. Frank Hoff, now in business at 249 North Main street, Wichita, Kas., had been given up to die of consumption. He had been treated by the greatest specialist in Brooklyn, N. Y. It was some seven years ago, and when he had tried everything else without avail, that he came to Professor Samuels and was cured. He is a large, strong man and weighs 240 pounds now, and when called upon by the interviewer, stated that he owed his life to Professor Samuels.

Mr. H. S. Bodkin, living at 110 Frisco street, Oklahoma City, Okla., had what physicians told him was incurable paralysis and a blood clot on the brain.

In 1900 he had the first attack; in 1902 another attack, and a few days later a third attack. Physicians finally told him that blood clot on the brain has caused locomotor ataxia, and stated that nothing could be done for him. After taking treatment from various doctors for several years, in 1909 one side became entirely paralyzed. Soon after this he began taking treatment from Prof. Samuels. He is now, although in his seventieth year, in good health, the paralysis having entirely left him. He does not even us a cane and walks anywhere any other healthy man can.

Mr. Geo. Hartman, who lives at 211 North Meridian street, Wichita, Kas., had what some physicians pronounced Bright's disease and others called diabetes. Various doctors, among them his family physician, had given him up to die. He was so weak he could hardly walk. About this time he heard of Prof. Samuels and placed himself in Prof. Samuels' care and showed a change for the better in a few weeks. At the end of ten months he felt just as well as he ever did and claims he is absolutely cured. It is now more than a year since he took the treatment and he has never had a recurrence of the trouble.

Mrs. J. T. Williamson, who resides at 200 B street, West, Hutchinson, Kans., was almost on the verge of the grave with consumption and nervous trouble. For nearly 22 years Mrs. Williamson was seriously afflicted and the doctors said she had St. Vitus Dance in addition to tuberculosis. Many leading physicians had pronounced her incurable and stated in the spring of 1909 that she would be buried with the falling of the leaves in autumn. She turned as a last resort to Prof. Samuels, and, after starting his treatment, Mrs. Williamson had only one hemorrhage of the lungs and began to improve at once. In a short time she was able to do her own housework. She recently had her lungs examined by a doctor who pronounced them absolutely sound and well. In addition to this, the old-standing nervous trouble had disappeared.

Mrs. H. J. Burroughs, living at Collins, Ia., and who had a serious case of heart trouble, in a recent letter to Prof. Samuels states: "I have not taken a drop of medicine since I began your treatment. Before that I had to take from one to four heart tablets a day. I had dizzy, blind spells and my heart did not beat regularly at all, but just flutter; now it beats regularly and does not bother me a bit. I tell everyone I talk with of your treatment and what it has done for me."

Mr. C. W. Neel, living at Broken Arrow, Okla., had a very bad case of rheumatism; writing Prof. Samuels in a recent letter, states as follows: "Thank you, Professor, ten thousand times for your assistance in curing me of that awful rheumatism. I am still hard at work and feeling fine."

Mr. C. C. Miller, living near Hutchinson, Kans., had been given up to die by the best physicians in that section of the country with what they termed kidney trouble. After all else had failed, he began to treat with Prof. Samuels. He took the treatment for six months, after which all symptoms disappeared and he has never had a recurrence.

Miss Daisy Hubbard, living at Alva, Okla., in a recent letter wrote: "For fifteen years I have been subject to epilepsy and have received treatment from several noted doctors and have failed to receive permanent good." As a last resort she began treatment from Prof. Samuels and now has no symptoms of the disease.

Mrs. Mary Symms, a trained nurse living at Newton, Kans., brought her sister, Mrs. Rice, who resides at Dempster, S. Dak., to Wichita to be treated by Prof. Samuels. Her sister had what the best doctors called paralysis of the optic nerve and said that nothing could be done to bring back her eyesight and she had resigned herself to go through life totally blind. She began treatment under Prof. Samuels, and now Mrs. Symms writes as follows: "She can now see with the eye that was entirely blind. Your remedy is certainly a wonder, and what I positively know to be a fact is that it cures those who have been given up as hopeless cases."

Mrs. Louisa Lockhart, living at Washington, Kans., had a very bad case of kidney and bladder trouble. She had reached the point where her kidneys and bladder were in an awful condition. In a recent letter to Prof. Samuels she states: "After taking your treatment two weeks I was able to do my own housework, which I had not done for months. I took the treatment one month and now I am well in every respect, thanks to your wonderful treatment."

Mr. Jacob Bitteridge, Pilot Butte, Sask, Can., who had a bad case of heart trouble, in a recent letter to Prof. Samuels states as follows: "I guess you will think I have forgotten you, but that will never be. I will never forget the man who saved my life. Last year at this time I was not able to feed myself, and now I can shoulder 160 pounds."

"Is it necessary for your patients to come to see you to be treated?" was asked. "No: my treatment can be sent by mail. Many of my patients come to see me, but it is not always necessary. My treatment is sent to hundreds, and, in fact, I am as successful in treating that way as though the patients were right here. To people from a distance who write me, an information blank is sent to fill out. In this way I am enabled to send them the treatment with full directions for its use."

"I should think with your ability to cure you would be in a position to demand big money from your patients," remarked the interviewer. "No, I do not do that now. My charges, when the patients used to call on me in person, used to be pretty high. I am getting old, and I feel that it is my duty in my last years to place my treatment in the hands of the poor as well as the rich. I believe that I owe a duty to mankind, and that as many people as possible, no matter what race or nationality, nor where located, should be benefited by my life's work. On this account, I have reduced my charges so they are within reach of all.

"My greatest aim in life from now on will be to relieve the ills of humanity, and when death shall claim me, I have arranged so that my secret will not die with me, but will be known, so that men in all ages to come will reap the reward of my life's work.

"Everyone who is sick, no matter what their troubles may be, should write Professor Samuels, room 110, Samuels Bldg., Wichita, Kas., for his "Message of Facts," and they will find something in it of interest to them.

To Raise Fine Chrysanthemums.

To raise fine, large chrysanthemums one should begin early in the spring, putting a single plant alone in pot, box or out in a nice, rich bed, and keep all sprouts and suckers pinched off, also all buds, when they begin to form, pinched off, but the main one in the top. And keep well watered and give liquid manure, made by putting cow manure in a barrel and pouring water over it and drawing off at the bottom of barrel. Give this to the plants twice a week. It is surprising to an amateur how large they will grow and how well they will mature; how evenly they will grow out their petals.

To prepare the barrel for liquid manure, bore a hole in barrel near the bottom, put in an armful of straw, fill up with cow droppings half full, then pour in water to the top of barrel and stand a day or two, having a peg to stop the hole in the bottom. To use, draw the peg and let it run in watering pot, then replacing water with fresh. By that means it is always ready soaked when you want to use it.

A piece of saltpetre the size of three grains of corn dissolved in the water, given once a week, is fine to induce a large, rapid growth, but one must be careful not to pour it on the leaves, as it will burn them if too strong; but if one wants to raise nice, large bunches, not caring for great size of single flowers, let several plants grow together, not pinching off the buds, and treat same way as to work, water and manure. For general, all-purpose use I prefer the latter; but for exhibition purposes we must use the former.—Mrs. H. M. Prince.

Wholesale Price of Nuts.

Nuts are selling in St. Louis as follows: Pecans at from 9 to 10c. per pound; black walnuts at 50c. per bushel; large hickory nuts at 75c. per bushel; shellbark at $1.50 per bushel; hazelnuts at 5c. per pound. Peanuts, farmers' stock, at 3 to 3½c. per pound. Italian chestnuts at 7c. per pound.

St. Louis Hay Prices.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Helped to Remember.

A colored preacher was vehemently denouncing the sins of his congregation. "Breddern an' sistern, Ah warns yo' against de heinous sin o' shootin' craps! Ah charges yo' against de brack rascality o' liftin' pullets! But, above all else, breddern an' sistern, Ah demonishes yo' at dishyer season against de crime o' melon stealin'!"

A brother in a back seat made an odd sound with his lips, rose and snapped his fingers. Then he sat down again with an abashed look.

"Whuffo, mah frien'," said the preacher sternly, "does yo' r'ar up an' snap yo' fingahs when Ah speak o' melon stealin'?"

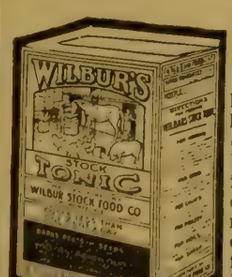
"Yo' jes' reminds me, pahson," the man in the back seat answered meekly, "whar Ah lef' mah knife."—San Francisco Argonaut.

Liberal Offer by Well-known Stock Food Company.

It is not every day that the farmer has an opportunity to test, absolutely free of charge, an article that is claimed to do much for the health of all kinds of farm animals. But here is a real opportunity.

The Wilbur Stock Food Company, 208 Huron street, Milwaukee, Wis., makers of the celebrated Wilbur Stock Food, Stock Tonics, etc., are endeavoring to let every farmer know about the wonderful merits of Wilbur's Stock Tonic. In order to do this they agree to give absolutely free a regular one dollar package of the Tonic to any farmer who will fill out and mail the coupon in their large ad. on another page of this issue. It is estimated that nearly a million packages will be distributed in this manner.

Wilbur's Stock Tonic has been on the market for several years, and those who have used it find that it is a real tonic and health promoter for horses, cattle, hogs, sheep, chickens and all live stock. It is intended not only to restore natural, healthy conditions in farm animals, but to ward off diseases by toning up the blood, giving strength and regulating proper digestion and assimilation. It supplies those blood and bone-making elements not obtained from an ordinary hay or grain diet.



Wilbur's Stock Tonic has been perfected after many years of study and experimenting by live stock experts. It is now being used by farmers and stockmen in all parts of the country, and the results have been found wonderfully satisfactory. In some cases animals have been restored to a state of perfect health after being in bad shape for a long time.

A Pennsylvania farmer says of Wilbur's Stock Tonic: "We have used one pail of your Tonic for our two horses. It saved the life of one of them after everything else failed."

A Kansas farmer writes: "Would like to know the price on one thousand-pound lots of Wilbur's Stock Tonic. Have been feeding it about two months and think it is all it is claimed to be."

Hundreds and hundreds of similar letters are on file, so Wilbur's Stock Tonic must really be an article of great merit.

This being a bona-fide, give-away proposition, without any strings whatever attached to it, we would suggest that all our readers clip out the coupon and send for a free package. No money is required. The manufacturers propose to stand all cost of this free trial, as they know so well what a valuable thing Wilbur's Stock Tonic is. They feel confident nearly every farmer will want to keep it on hand after the first trial. The ad. with the coupon referred to will be found on page 32.

Buildings on the Farm.

The construction of buildings on the farm is bettered and simplified by firms that manufacture houses and deliver them right on the ground ready to be put up. One of these firms has an advertisement in this paper on page 8. By writing for their catalogue and Home Builders' Plan Book and enclosing 10 cents for postage you will receive a valuable work on buildings that will give practical ideas and a clear statement of cost. There are fifty-six plans for houses and bungalows. You can buy the complete house, or the mill work, the mantels and the hardware. The book is a safeguard to the home builder and should be sent for at once. Address, Gordon-Van Tine Co., 2482 Case street, Davenport, Ia.

An Assortment of Dahlias.

To get a fine assortment of dahlias, buy a five-cent paper of mixed dahlia seed; sow in a good, rich bed in March. The seeds are slow about coming up, but when they do, and get three inches high, they may be carefully taken up and set where they are wanted to bloom; or, if left all the year in seed-bed, many of them will bloom and we will know what colors we are setting at certain places another year. Some take them up in the fall, but I never do. I merely cover them where they stood and bloomed all summer and fall with their own stalks and other refuse in the yard. Of course that would not do in our Northern states, where the ground freezes so deep. From one mixed paper of seeds I raised more than a dozen dahlias. After staying in one place two years they should be taken up and parted, as they will get too many in a hill and not do well.—Mrs. H. M. Prince.

To Raise Cannas of Several Colors.

Buy a five-cent paper of mixed canna seed from a reliable seedsman and sow in fine mellow soil after all danger of frost. It is best to put the seed in a cup and pour really hot water over them and let soak over night. It takes them a long time to germinate; therefore, the bed should be kept damp by watering. When they come up, each looking like a little young stalk of corn, they may be carefully lifted and set where wanted to bloom.—Mrs. H. M. Prince.

Sorghum cane seed is quoted at St. Louis at $1.25 per 100 pounds, and sorghum at 15 to 20 cents a gallon.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a **quick recovery,** you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

No. 6832.—Shirred Blouse With Straight Tunic. 34 to 42 bust. 6¾ yards 24 or 27, 5¾ yards 36 or 4¼ yards 44 inches wide, with 2¾ yards of banding 6 inches wide for the band on the tunic, the girdle and V-shaped portions of the blouse, 3¼ yards of fringe, 1 yard of all-over lace when yoke and under-sleeves are used.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

To The Sick LIFE IS "A LIVING DEATH"

CAUSE AND CURE OF BACKACHE!

Scientists Say That the Real Reason for Back Aching, Twisting Pains Has Been Found.

QUICK AND SIMPLE REMEDIES.

Readers of The National Farmer and Stock Grower, who have members of the family suffering from any back-breaking, rheumatic pains, kidney troubles and similar diseases, will be interested in this article from a news item in a Chicago paper.

Many a woman and many a man reading The National Farmer and Stock Grower has suffered night after night from backache.

The cause is often not known. Some call it rheumatism, some call it kidney trouble. The backache comes and the backache goes, and sometimes it becomes extremely serious. Few know what terrible diseases lurk back of these symptoms.

It is the arrangement of the inner vital organs which causes these backaches. Very often an ordinary rheumatism hides a terrible case of chronic inner ailment.

But here is an item from the Chicago Inter-Ocean which will give hope.

"At last a perfectly harmless and positive cure appears to have been found. Dr. T. Frank Lynott, formerly of the New York University, New York, later of the famous Bellevue Hospital, and now a celebrated specialist of Chicago, has a very quick acting formula which has been approved by the best doctors."

It must be explained in the first place that every kind of rheumatism, torturing backaches, many kinds of gout, so-called, swelling in any part of the body and pains in the big joints, pains in the neck or head and soreness of the nerves, together with general nervousness, are often if not almost entirely caused by kidney disarrangement.

OFFER IS TO OUR READERS.

The editor of The National Farmer and Stock Grower saw the above clipping in the Inter-Ocean of Chicago and wanted to know more about this formula for curing kidney trouble. So many people have been writing us, telling us about chronic backaches sometimes lasting for many, many years, that we looked into the matter and found Dr. Lynott had a treatment which really is said to be quite marvelous.

On further investigation we were so impressed with this remedy that we induced Dr. Lynott to make an announcement to the readers of this paper, which appears on this page. The National Farmer and Stock Grower, of course, would not print this announcement unless they had investigated the offer and found it in every way legitimate. In fact, Dr. Lynott went so far as to state that he would give a free test treatment to the readers of this paper who applied at once, as he could quickly prove that he would stop the backaching, twisting pains almost instantly and believed it would cure those who would take the free treatment according to directions.

OPEN TO ANY SUFFERER.

In fact, if, after reading this announcement, any reader of this paper who has a member in their family sick with rheumatism, kidney trouble or backaching pains, will fails to get the free certificate, it seems to me that such a person is lacking somewhat in sympathy for the sufferer in his or her own family. Do you not think so yourself?

We appreciate, of course, that a good many free offers are made in the newspapers, and it is sometimes not possible to tell whether an offer is free or not free by reading it. But in this case we, ourselves, know that the offer is a free offer in every sense of the word. There is nothing to pay when you sign the free certificate, absolutely no obligations to take anything. Of course, you will probably, in case of a cure in your own family, recommend Dr. Lynott's treatment to your friends, and that is expected, but you are not even under obligations in that respect.

Yes, a living death!

A life worse than death—torn and rent by back breaking, twisting, terrible, torturing, rheumatic pains—the back twisted, the muscles like knots, the blood rushing through the tired, exhausted vessels of the body—the whole body as if placed on a rack and torn hither and thither.

And underneath it lurks the fear, the constant fear that the rheumatism will go to the heart, then the machinery of the body will stop instantly. For if just a touch of that terrible pain reached the main arteries of the body, just a twist and turn such as you feel in your feet or in your shoulders reached the place where the blood is pumped—there might be instant death!

But Now Read--Read This

SAVED!

Yes, saved!

Saved from that torturing, racking pain. No more attacks of rheumatism, no more twitching of the inner body. No more sitting around in despair. The body straightened out, the limbs, bones and joints all back to normal, perfectly well, perfectly healthy, years added to your life—years taken away from your present age—you feel young again, you feel like bouncing around—that is what others have told us, that is the way others have described their cases, that is the way you can be saved!

Your Chance Now -- Right Now!

Who Is Dr. Lynott?

Dr. Lynott is a specialist strictly and does not touch any but these diseases. He received a special diploma on urinary diseases from the great New York University of which the famous Bellevue Hospital is now an honored part, and, as you perhaps know, Dr. Lynott was formerly identified with this great and famous hospital.

You are just in time to get relief from that awful, awful pain—just in time to get the treatment absolutely free, for it has been decided to convince sufferers by this free treatment of the great value of Dr. Lynott's method, so that they will tell their friends and spread the news of the great remedy. If you answer right now, you can try the treatment free and you will get relief from the back-aching pains, from rheumatism, kidney trouble, or any other symptoms shown in the table opposite. Just look over the table and see whether you are suffering from any of the symptoms shown therein. If you are, get the free proof treatment today.

DANGEROUS SYMPTOMS!

1—Pain in the back.
2—Too frequent desire to urinate.
3—Burning or obstruction of urine.
4—Pain or soreness in the bladder.
5—Prostatic trouble.
6—Gas or pain in the stomach.
7—General debility, weakness, dizziness.
8—Constipation or liver trouble.
9—Pair or soreness under right ribs.
10—Swelling in any part of the body.
11—Palpitation or pain around the heart.
12—Pain in the hip joint.
13—Pain in the neck or head.
14—Pain or soreness in the kidneys.
15—Pain or swelling of the joints.
16—Pain and swelling of the muscles.
17—Pain and soreness in nerves.
18—Acute or chronic rheumatism.

Remember, Dr. Lynott will ask no money from you for this free certificate. He sends the best remedies free. He asks no obligations from you, but he hopes, of course, that in case of your immediate relief or quick cure you will tell your friends about it. You are not obligated to tell a single friend, but naturally you will when you are cured. So better attend to this today.

No letter is necessary, this free certificate is all you need send. Enclose in an envelope—that is all.

I will personally take charge of your case and when the free certificate reaches my office I have given instructions that it be put right on my desk so that I can study your case myself. My object in giving this free trial treatment is to accomplish as many cures as possible and as quickly as possible, so when you send the free certificate, address me personally,

Dr. T. FRANK LYNOTT

4167 Occidental Bldg., CHICAGO

If you have a friend who is suffering from kidney disease or bladder trouble or rheumatism, do you not think you owe it to your friend to tell him or her about this great free offer?

There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Buy the Papers of Mixed Seed.

There are so many seeds put up and sold as "Mixed Papers," it is surprising how much can be gotten out of them. By buying a few of such packets we can get all of the leading sorts and colors. All women love, or should love, flowers; but most of us farm women have very little money to spend on them; but by sending for the seedsmen's catalogues and carefully reading them and selecting a few of these mixed papers we can get a start of so many different flowers for so little money—only a few cents; and they do add so much to the pleasure and beauty of the home.

Flowers exert such a sweet, restful influence over us, we should try to have a few. Many women, if they just knew for how little outlay in money they could get them, would surely have some. It takes work and planning; but they more than pay us for our trouble. It is so restful, after we are done with our day's work, to sit and hold baby and look at our flowers, even though they are just annuals. And we can get a paper of mixed seeds for three or five cents, or three for ten cents; and with a little work we can have a lovely display of colors to rest the weary eyes and the tired mind. Let us have a few flowers.—Mrs. H. M. Prince.

The Spring Style Book.

The greatest and best ladies' outfitters are the National Cloak and Suit Company, of New York City. The advertisement of this house is on page 3. The National Cloak and Suit Company offer a special embroidery waist of fine quality at a nominal price. They also offer to send the best style book free. There are 224 pages in the style book and it is full of the best patterns and up-to-date styles. Style and quality without extravagance go together in the style books of the National Cloak and Suit Company.

To Grow Sweet Peas.

To grow sweet peas to bloom a long time, they should be planted very early; here in our Southern country they should be planted in December for best results. They don't seem to be hurt by hot, dry weather nearly so bad if planted in December or January as they do if planted later.

I like a very rich bed, dug or plowed very deep and thrown up so it will shed off surface water. Then plant the seed thick; don't be afraid of having it too thick; keep the grass and weeds down and have them well supported, so they won't fall down. The cold does not seem to hurt them much. The blooms should be picked every day to make them keep blooming. They, like love, the more we pull and give to our neighbors the more we have left.—Mrs. H. M. Prince.

High Cost of Living.

The indignant citizen was freeing his mind. "You want fifty cents for admission to this motion-picture show, do you?" he exclaimed. "That's an infernal outrage!"

"Look here, mister," said the man at the box office, "this is no ordinary entertainment. These pictures cost a small fortune. They show two men taking dinner together. One of them is eating a porterhouse steak and the other is getting away with a plate of bacon and eggs."—New York Evening Mail.

Variation in Amount of Straw.

An Adams county, Illinois, correspondent writes: "I have always supposed that the richer the soil the heavier the straw would be; but in my oat crops of 1909 and 1910 the reverse was true."

The season really has a very marked influence upon the growth of straw. We naturally look for a much heavier growth of straw on ground gorged with nitrogen than we would on thin ground. However, the rankness of growth of straw, as well as the percentage as compared with the grain, depends upon whether the season is wet or dry. It has been frequently observed that the rankest growth of straw occurs during wet seasons on ground abundantly supplied with nitrogen; and, conversely, the lightest growth of straw on tolerably rich ground occurs during a dry season. But almost invariably we get the finest quality of grain during those dry seasons, when the growth of straw has been hindered. So, I believe that growth conditions, as controlled by moisture, have much to do with the bulk of straw produced. —L. C. Brown.

GOOD BOOKS, ANNUALS, ETC.

ARMOUR'S FARMERS' ALMANAC is a veritable encyclopedia of scientific, practical, instructive, amusing and entertaining farm facts and fancies, and will be enjoyed by every member of the farmer's family. It contains numbers of stories and special articles. Issued free by Armour's Fertilizer Works, Union Stock Yards, Chicago, Ill. There is also a handy Pocket Memorandum Book that goes with it.

PROCEEDINGS OF ANNUAL MEETING OF THE AMERICAN ABERDEEN-ANGUS BREEDERS' ASSOCIATION. This pamphlet is issued by Charles Gray, Secretary, Union Stock Yards, Chicago, Ill., in the interest of the breed. The title page has the picture of Shamrock II., the grand champion of the Chicago International of 1910. It is a business publication, interesting to all who desire to raise perfect beef cattle.

RATEKIN'S IOWA-GROWN SEED CATALOGUE, issued by Ratekin's Seed House, Shenandoah, Iowa. It is a book of 100 pages, well indexed and complete for reference. Sent to all farmers who apply.

CLAY, ROBINSON & CO. FLOWER GIRL SOUVENIR ANNUAL AND CALENDAR, by the noted artist Galileo Galli. This beautiful work of art is advertised on page 21.

INTERNATIONAL HARVESTER COMPANY CALENDARS to be had free of all I. H. C. agents. Always beautiful, lasting and useful, one for each make of harvester.

ELINORE, ANNUAL BY THE FORBES LITHO MFG. CO. OF BOSTON. Beautiful calendar representing the highest type of American art.

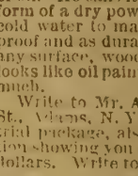
Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r 418 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.



PATENT YOUR IDEA

$8,500 for one invention. Book "How to Obtain a Patent" and "What to Invent" sent free. Send rough sketch for free report as to patentability. Patents advertised for sale at our expense in fourteen Manufacturers' Journals.

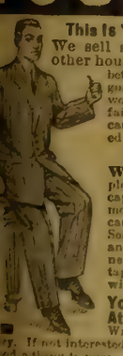
HOW MUCH DO YOUR FENCES COST?

This question of fencing is becoming more serious and more expensive every year. As the necessity for fencing increases, the cost goes up and the quality seems to go down. It is a serious problem which every farm should consider in all its phases before buying a single rod of fence. Study this question—it will pay you. If you are contemplating buying farm fence, lawn fence or poultry fence, send to the Brown Fence and Wire Company, Cleveland, Ohio, Dept. 45, for their fence book. You will be interested in what it shows about wire fences. Mr. Brown handles the question without gloves. He knows how cheap wire light uprights or stays and poor galvanizing have made it almost impossible to find a wire fence that will last and give good service. He shows how to choose a fence that will give you double wear. The book is free and is well worth reading. Send for it.

Use Absorbine for a sure and speedy cure of windpuff or strained joint. This remedy has been used extensively by horsemen and horsetakers, and proves successful. L. H. Brown, of Snedekerville, Pa., reported under date of August 25, 1910: "I have used your Absorbine on several different occasions and it has proved very satisfactory, having reduced a capped hock, also many puffs." This preparation is on sale by druggists. $2.00 per bottle, or sent direct, express prepaid, upon receipt of price. Send for pamphlet giving detailed information. W. F. Young, P. D. F., 106 Temple street, Springfield, Mass.

YOU $5 TO $10 A DAY

EVEN if you never sold a dollar's worth of goods in your life, make $5 to $10 a day—selling our made-to-order suits and pants.



This Is Your Chance To Make Money.

Don't Wear a Truss

FREE

STUART'S PLAS-TR-PADS are different from the painful truss, being made self-adhesive purposely to hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. Soft as velvet—easy to apply—inexpensive. Process of cure is natural, so no further use for trusses. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TODAY.

PATENTED JULY 12 1898

TRIAL OF PLAPAO

PLAPAO LABORATORIES, Block 57, St. Louis, Mo.

The "Quick-lunch" Question.

The hustling business man of today, old or young—finds it hard, many times, to break in on his busy day in order to take lunch at noon. So hard, in fact, that the "hurry-up" restaurants are filled every day with swarms of men, bolting their food in wild haste.

Many of them gulp down, in a jiffy, rich and heavy foods that they really should take several times as long as they do to masticate and consume. That is why so many men feel out-of-sorts in the afternoon and suffer with indigestion.

If one must take a hasty lunch, it had better be Graham Crackers and milk. The Graham Crackers baked by the National Biscuit Company are light, yet nourishing, since they contain the best of the wheat. At the same time they are very pleasing to the taste, having a delicious nut-like flavor. They stimulate the digestion, too, and promote general good health.

The Graham Crackers baked and packed by the National Biscuit Company come in packages which you can distinguish by the well-known In-er-Seal Trade-Mark, and which are moisture and dust-proof, thus retaining all their original goodness and flavor when opened.

Bakers and Housekeepers.

The bakers have now formed an organization for the purpose of buying flour cheap and for the purpose of keeping up the price of bread. They claim that if families wish to have cheap bread, all they have to do is to buy flour and bake it. Although 150 pounds of bread can be baked from 100 pounds of flour, it is reported that a large majority of the housekeepers in the country will pay any price for bread rather than bake it at home.

During the past three years The National Farmer and Stock Grower has started ten thousand farmers to experiment in grain improvement, more especially in corn growing.

NO MORE SOUR HAMS AND SHOULDERS ON THE FARM. Hausam Sure Cure for curing hams, shoulders and bacon. Ingredients of my preparation endorsed, recommended and used by all successful packers in the United States. Permitted by the federal authorities of the Pure Food Department. Send 75c. to-day for enough of Sure Cure to add to your brine to cure 600 lbs. of meat. Valuable instruction how to care for meat while in the curing process sent free with an order for Sure Cure. Address, **J. HAUSAM, 317 Western Ave., Peoria, Ill.**

Honors to James N. Brown.

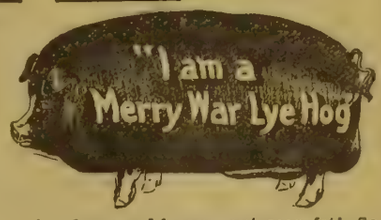
The exercises attending the admission of the name of James Nicholas Brown to the Illinois Farmers' Hall of Fame will be held at Memorial Hall, College of Agriculture, Urbana, Ill., on January 25, 1911. There will be suitable addresses by prominent citizens. Mr. John N. Brown was a pioneer importer and breeder of cattle; he was the first President of the Illinois State Fair, and in all ways an estimable farmer and citizen. He was born in Kentucky and in 1833 moved the first herd of pure-bred Shorthorns into the Mississippi Valley. The Hall of Fame is intended to commemorate the victories of the peaceful arts of agriculture, and every year one name is added, the first being that of Cyrus Hall McCormick, the inventor of the Reaper.

The top price on wool, January 1st, at St. Louis, was 23 cents a pound.

A Cheap Way To Insure Healthy Hogs

You believe in insurance—don't you? In fact, you are paying out your good money right now to protect your house, barn and other buildings from loss by fire, beause you wouldn't feel safe for even a day without such insurance.

Are your hogs insured? If not, why not? We don't mean fire insurance, but life insurance—"Merry War" Lye insurance—which will keep your hogs always fat and healthy and insures you getting them to market in prime condition to bring top prices.



How To Prevent And Cure Worms And Cholera

Here is a simple, sure, safe way to keep your drove in a perfectly healthy condition, render them immune to contagious diseases and increase the weight.

Tablespoonful "Merry War" Lye mixed with slop for ten hogs, or one-half can with barrel of swill for larger quantity. Stir well, feed night and morning.

Do this, and no matter how sick your hogs may be, in a few days you will see a marked improvement. "Merry War" Lye cleanses the system, tones the digestive organs, makes sick hogs well and insures your pork profits.

Take No Chances!

The time to act is NOW, before worms, cholera and other hog troubles get in their work. It will be too late when Mr. Hog slinks off into some corner, gives a feeble grunt, stiffens out his legs and passes away.

That kind of a dead hog will never fatten your bank account. What you want is prime hams and bacon—not soap fat! So take no chances, but insure your porkers against an untimely death by starting them on "Merry War" Lye. And do it today. Don't delay!

The Cost Is A Trifle

"Merry War" Lye is the least expensive as well as the best protection against hog losses ever discovered.

Its action is sure, and the cost for constantly keeping your drove in prime condition is so small that you will hardly notice it.

A fair trial will convince you beyond all doubt that "Merry War" Lye will do everything that its thousands of Farmer Friends over the country claim for it.

At Your Dealer's

While most up-to-date dealers handle "Merry War" Lye, some dealers may offer you some other brand. If so, don't accept it, but explain to the dealer that while there are brands of Lye that are good for certain uses, yet there is only one kind "Merry War" Lye—that is safe and specially prepared for use in preventing and curing sick hogs.

So if your Dealer can't supply you, write us and we will give you the name of one who can; and will also send you a valuable book on "HOW TO GET THE BIGGEST PROFITS FROM HOG RAISING." Send for this book today.

"Merry War" Lye comes in 10c cans, or 24 for $2.00, at Grocers' or Druggists'. Accept no substitute.

E. Myers Lye Co., Dept. 22 St. Louis, Mo.

Please mention National Farmer and Stock Grower.

Burbank's Crimson Winter Rhubarb.

A premium worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks. A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge

Burbank's Crimson Winter Rhubarb.

the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower. THIS IS A DOLLAR PROPOSITION. Send us One Dollar for two single one-year subscriptions to The National Farmer and Stock Grower, or for your own two-year subscription, and we will send by mail, prepaid, one copy of a booklet entitled "Rhubarb For Profit" and Six Roots of Burbank's Crimson Winter Rhubarb. Send your dollar quickly and the book and plants will be mailed you from Pasadena, California, where they are grown. This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish valuable premiums.

Simpson-Eddystone

Black and White Prints

have been the standard calicoes since 1842. Dainty and stylish dresses are possible with these tub-proof cotton dress-goods. There are dozens of beautiful designs, printed with absolutely fast black on carefully-woven, first quality, durable cloths.

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philada.

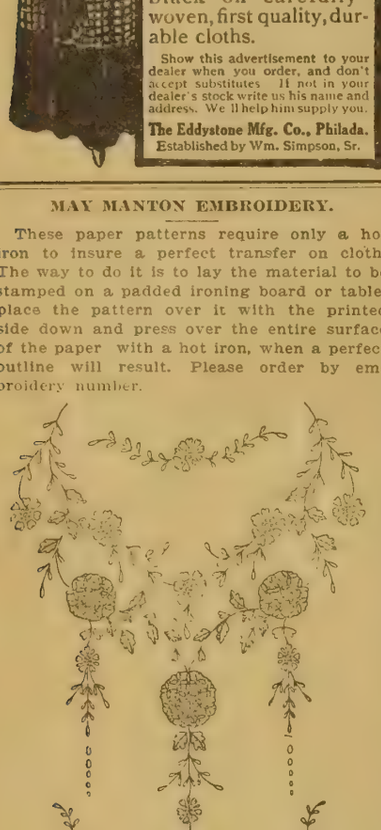
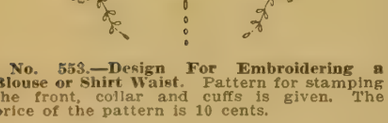
MAY MANTON EMBROIDERY.

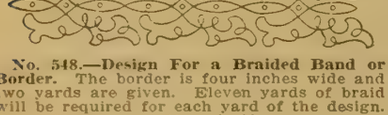
These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



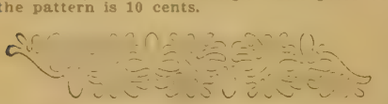
No. 553.—Design For Embroidering a Blouse or Shirt Waist. Pattern for stamping the front, collar and cuffs is given. The price of the pattern is 10 cents.



No. 548.—Design For a Braided Band or Border. The border is four inches wide and two yards are given. Eleven yards of braid will be required for each yard of the design. The price of the pattern is 10 cents.



No. 552.—A Design For a Border or Band, to be braided or outlined with bands. The border is 1¼ inches wide and four yards are given. Six yards of braid will be needed for each yard of the design. The price of the pattern is 10 cents.



No. 549.—Design For a Braided Border or Band. The border is three inches wide and two yards are given. Nine and one-half yards of braid will be required for each yard of the design. The price of the pattern is 10 cents.

No. 550.—Design For an Embroidered Band or Border. The border is 1¼ inches wide and four yards are given. The price of the pattern is 10 cents.

No. 551.—Very Stylish Design For Bow Knots For Embroidery or Lace. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Race Suicide on the Farm.

The pitiful story was told in a St. Paul paper, a few days ago, of an industrious and capable farm laborer who had answered several advertisements of farmers in need of just such experienced services as he was able to render, but whose application was rejected, in each instance, because he had a wife and two small children. The farmers wanted neither women nor children about their farms. So this competent farm worker was obliged to accept employment in a city stable.

It is to be feared that this is by no means an isolated instance. Human kindness has been so far eliminated, in many cases, from the relationship between the farmer and his hired help, and that relationship has been put so exclusively on a hard business basis, that the complaint is common that "the farmer cares more for the comfort and happiness of his cattle and hogs than he does for the well-being of his men."

Under healthier conditions in rural life, the married workman would receive the same preference that he generally does from employers in mercantile and manufacturing pursuits, as being more reliable and less likely to seek a change, if fairly well treated, than the single man. Aside from this, however, there is a moral and social obligation, resting at least as strongly on the farmer as on anyone else, to encourage family life among workers, and thus to promote stability in rural populations and to discourage the nomadism among laborers, which is the bane of our agricultural enterprises.

It is altogether probable that the actual decline in population, shown by the last census to have taken place in extensive agricultural areas—notably in the state of Iowa and in Southern Minnesota—is due to the discouragement of marriage among farm workers, and the refusal of employment to men with families.

That way lies the decline of states and the ruin of democracy. If we want growth in population, and the perfect working out of the democratic ideas underlying American institutions, we must reverse our methods, welcome rather than repel the man with a family, and be willing to share with him some portion of the opportunities of the farm.—C. R. Barnes, Extension Division, University Farm of Minnesota.

SEED CORN PREMIUMS.

OFFERED BY THE NATIONAL FARMER AND STOCK GROWER, THE BEST MONTHLY FARM PAPER IN THE UNITED STATES.

The National Farmer and Stock Grower, published monthly at St. Louis, Mo., subscription price 50 cents a year, is largely responsible for the great improvement in corn-growing methods, especially in the Middle and Southern States, where the crops have so largely increased. This is done by furnishing subscribers small quantities of selected seed corn grown by champion corn growers as subscription premiums and offering additional prizes when the corn grown from the premium seed receive awards at the State, Interstate and National Fairs and Expositions. This process is still going on, and during the year 1911 the usual and better offers are made.

OUR SEED CORN FOR THE YEAR 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana.

We have also contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

WHAT A SCHOOL BOY DID IN GEORGIA.

In the spring of the year 1909, Louie Brown, a school boy at Belmont Farm, Smyrna, Ga., received a pound of L. B. Clore's Johnson County White Corn as a subscription premium with The National Farmer and Stock Grower. With this seed in the same year he raised a good stand of corn and won a $50 first prize at the Georgia State Fair, besides winning a $25 first prize from The National Farmer and Stock Grower.

SECOND PRIZE AT THE TEXAS STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished to W. L. Norman, of Kingston, Tex., two pounds of Johnson County White Corn, grown by the famous champion corn grower, L. B. Clore, of Indiana. With this seed Mr. Norman raised about twelve bushels of corn, and with ten ears of it he won the second prize at the Texas State Fair.

WON PREMIUMS AT THE TENNESSEE STATE FAIR TWO YEARS.

In the spring of 1909, The National Farmer and Stock Grower furnished Mr. J. M. Gresham, of Rural Route No. 2, Smyrna, Tenn., a half-pound package of Yellow Dent Seed Corn, grown by Mr. D. L. Pascal, the famous corn champion of Iowa. This corn being sown and harvested, he selected a ten-ear lot from the yield, and by exhibiting it at the Tennessee State Fair he won the second prize in class for Yellow Dent Corn. Mr. Gresham also won a third prize at the Tennessee State Fair of 1910 with his Yellow Dent Corn.

WON ILLINOIS COUNTY FAIR PRIZES.

Two pounds of Johnson County White Corn, grown by Mr. L. B. Clore, of Franklin, Ind., were furnished by The National Farmer and Stock Grower to J. T. Boyd, of Rardin, Coles county, Ill. This was in the spring of 1910. From this seed corn he grew the ten ears that won first prize at the Coles County Fair and the sweepstakes prize for the best ten ears on exhibit.

WON A FRISCO SCHOLARSHIP.

In the spring of 1910, The National Farmer and Stock Grower furnished James A. Partney, of Chilton, Carter county, Mo., one pound of Johnson County White Corn, grown by Mr. L. B. Clore, of Indiana. From this pound of corn he produced a good yield, from which he selected ten ears that in the Corn Contest of Carter county, Missouri, won a Frisco scholarship, valued at $100, at the Missouri Agricultural College.

CHAMPIONSHIP PRIZE IN LOUISIANA.

Two pounds of Johnson County White Corn, grown by L. B. Clore, of Indiana, were furnished as a subscription premium by The National Farmer and Stock Grower to I. L. Haile, of Linville, La. This was in the spring of 1910. With this seed corn Mr. Haile produced a nice crop and exhibited ten ears selected therefrom and won first prize in class for White Dent Corn and the championship prize for Best Ten Ears exhibited at the show. This was at the Louisiana State Fair. He won $150 in all with ten ears of corn.

SECOND PRIZE AT THE MISSOURI STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished Clark Reibel, of Arbela, Scotland county, Mo., one pound of L. B. Clore's Johnson County White Corn. With this corn he produced ten selected ears that won second prize in class at the Missouri State Fair of 1910.

WON SEVERAL KENTUCKY PRIZES.

In April, 1909, Mr. Hiliary Downs, of Hunter's Depot, Ky., received one single pound of Pascal's Yellow Dent Seed Corn from The National Farmer and Stock Grower as a subscription premium. In that year he did not win a prize, but in 1910, from his own seed grown from seed furnished him the year before, he produced ears that won the first prize and sweepstakes at the County Fair. He also won second prize at the State Fair.

OUR PREMIUM OFFERS.

Anyone who will send us 60 Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription, and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

THE PREMIUMS WE WILL PAY.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

ORDER BLANK—SIGN AND SUBSCRIBE EARLY AND MAKE SURE.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.: Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me.....pound.. of Clore's White Corn and.....pound.. of Pascal's Yellow Corn as a premium.

SELECTED POETRY.

WATCHING AND WAITING.

I met the Old Fool Killer, he was strolling through the town,
His ears were cocked attentively, his brow was in a frown;
I asked him: "Are you after me?" the moment that we met,
He answered, reassuringly, but hopefully: "Not yet."

And then he sat him down and said: "I'm simply waiting here
For some one who is due right soon—he bobs up every year.
I've got my big club ready, and the minute he arrives
He'll wish he was a cat and had a good supply of lives."

"Is he the man who rocks the boat?" I asked, and he said: "No."
"Is he the man that tramps on folks beside him at the show?
Is he the man who leans on you when on the trolley car
And breathes into your ear, your little comfort thus to mar?

"Is he the man who calls you up when you are rushed with biz
And asks you in his merry tones: 'Can you guess who this is?'
Is he the man who tells you he will meet you just at eight
And keeps you standing in the cold because he is so late?

"Is he the man who tells his woes repeatedly until
With all the sympathy you have, you wish him further ill?
Is he the man—" The Old Fool Killer interrupted me
And: "None of these is on my list for this event," said he.

"The man I'm waiting for is he who in a solemn mood
Gives out a talk that bubbles from his righteous rectitude,
And says his conscience tells him that all honest mas and pas
Should tell their children that there isn't any Santa Claus."

—Chicago Post.

NEW YEAR'S MORNING.

Only a night from old to new!
Only a night, and so much wrought!
The Old Year's heart all weary grew,
But said: "The New Year rest has brought."
The Old Year's heart its hopes laid down,
As in a grave; but, trusting, said:
"The blossoms of the New Year's crown
Bloom from the ashes of the dead."
The Old Year's heart was full of greed;
With selfishness it longed and ached,
And cried: "I have not half a meed,
My thirst is bitter and unslaked.
But to the New Year's generous hand
All gifts in plenty shall return;
True loving it shall understand;
But all my failures it shall learn.
I have been reckless; it shall be
Quiet and calm and pure of life.
I was a slave; it shall go free,
And find sweet peace where I leave strife."
Only a night from old to new!
Never a night such changes brought.
The Old Year had its work to do;
No New Year miracles are wrought.

Always a night from old to new!
Night and the healing balm of sleep!
Each morn is New Year's morn come true,
Morn of a festival to keep.
All nights are sacred nights to make
Confession and resolve and prayer;
All days are sacred days to wake
New gladness in the sunny air.
Only a night from old to new;
Only a sleep from night to morn.
The new is but the old come true;
Each sunrise sees a new year born.

—Helen Hunt Jackson.

WHEN TO BEGIN.

If we had our lives to live over again,
If we might start afresh and anew—
What a joy it would be for us women and men
And what wonderful things we should do;
How straight we should walk and how wise we would talk!
How cheerful we'd be and how gay!
But if we're in earnest about our reforms,
Why don't we begin them to-day?

We feel that we'd never be foolish and fling
All our strength and our labor away,
And we'd readily do each commendable thing
Without either profit or pay.
But if we're so keen at reform to be seen,
If we're pining to enter the fray,
The question arises with pertinence now:
Why don't we get busy to-day?

The days that are gone are most thoroughly gone,
We can't bring them back if we try;
But the days that are coming roll steadily on,
And no one can ever tell why,
Unless it should be they're to help you and me
Do sensible things while we may.
They'll certainly help us live over our lives,
If we start out to do it to-day.

—Chicago News.

THE IMPOSSIBLE.

An old-time actor whispered to a statesman who had made
His exit without usual applause:
"There's a little bit of wisdom, which, I'm very much afraid,
You overlooked amid the old hurrahs,
Though the public may receive you with a loud and joyous roar,
And Fortune hold the ladder while you climb,
You mustn't think you've got things where you want them, ever more.
You can't keep taking encores all the time.

"Although the spotlight marks you at the center of the stage,
And the world may seem exclusively your own,
There must be some intermission if you would remain the rage,
Even for the best performer ever known.
It is true of simple singers. It is true of tragic folk.
It is true of things in reason or in rhyme.
You may voice your thunderous message; you may tell your little joke,
But you can't keep taking encores all the time."

—Washington Star.

THE DOUBLE SHUFFLE.

Back on the farm in old Missou,
Where I and other staples grew,
The folks would tell by pumpkin vines
And yellow gourds and other signs,
When storms were due and dew was due,
And what to do, do, do, do, do.
The animals and fowls and bees
Helped out the cause with joy and ease,
And graddad used to often say,
In his tobacco-chewing way:
"When the old mule's ears point straight ahead, it means, my son, some cares.
When his ears come close and point straight up, it's time to say your prayers.
But you're safe, my son, as a mountain goat and your lid will stay on top,
When the old mule merely jogs along and lets his big ears flop."

I have noticed, too, since I left the farm,
That an earnest man is full of harm;
That he who breaks the golden rule
Is built somewhat like that old mule.
And I've observed that when that guy
Is off his poise, no one will die.
For they're alike, these mules and men.
They're safe sometimes but you must know when.
And I've occasion every day
To think of what Missou folks say;
When the old mule's ears point straight ahead, it means it's time to fly;
When his ears point up toward the sky it may be time to die.
The only time you're really safe and you let the matter drop,
Is when that mule just jogs along and lets his big ears flop.

—Oregon Journal.

NATURE'S PUZZLE BOOK.

It seems to me that I can see,
In looking o'er the land,
Of things a lot that I am not
Prepared to understand.

The rivers, though they've far to go,
Remain within their beds,
And, still more queer, their mouths appear
Much larger than their heads.

The corn has ears, yet never hears
Its husky neighbor's stalk;
A foot each hill possesses, still
It never tries to walk.

To see, alas! a mountain pass
I've watched in vain a week;
And I have fears that mountaineers
Have never heard its peak.

Though in the race for foremost place
The cabbage gets ahead.
The spick and span tomato can
Still ketchup, so 'tis said.

While all agree as one that the
Potato's sweet and good,
It never tried to dot its eyes,
As certainly it should.

Trees sage and tall, their heads with all
The higher branches stored,
I've known to get so much in debt
Their trunks were seized for board.

So, as I look through Nature's book,
My mind but half perceives
Her puzzles all, though every fall
I watch her turn the leaves.

—Nixon Waterman.

English Beef Pudding.

Three pounds of beef—cheap cut of round.
One-half pound of beef suet.
One quart of flour.
Two teaspoonfuls of baking powder.
One-half teaspoonful of salt.
One and three-fourths cups of milk or water.

Cut the meat in pieces about one inch square.

Put the suet through the food chopper and mix it with the flour, with which the baking powder and salt has been sifted; add the liquid; roll the dough to about one inch in thickness, having it round in shape. Lay it on the pudding-cloth, which has been wrung from boiling water and dredged with flour to prevent the pudding from sticking.

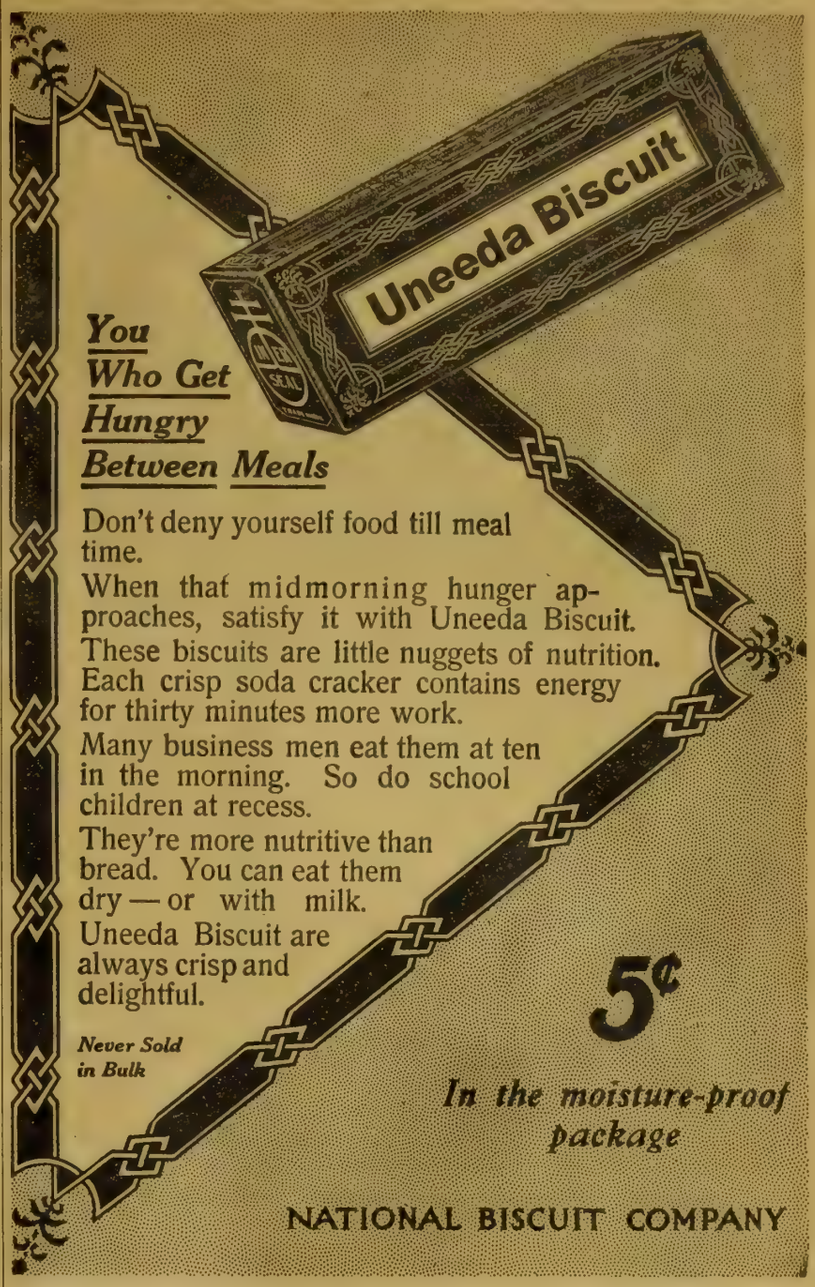
Spread over the dough the meat and a little suet (if the meat has little fat in it); dust with salt and a very little pepper; roll the dough as for a roly-poly; tie securely in the pudding-cloth; plunge into boiling water and boil three hours, keeping the pudding floating during the entire time of cooking. If necessary to add extra water, be sure that it is boiling.

On removing from the water, open the bag immediately and turn the pudding onto a hot platter. Cut a slit in the pudding, and if it does not seem to have sufficient moisture, pour into it a little stock or drawn butter.

Half of the materials called for in the above receipt make a pudding large enough to serve six hungry persons. It forms an excellent substitute for a roast and is much less expensive.

The writer served it as a surprise dinner for a number of friends, and it was pronounced delicious by all.
—Mary L. Bull, Extension Division, University Farm, Minnesota.

"We can reason down a man's theology, but we cannot reason down the life of a Christian man."—Alexander McKenzie.



Uneeda Biscuit
You Who Get Hungry Between Meals
Don't deny yourself food till meal time.
When that midmorning hunger approaches, satisfy it with Uneeda Biscuit.
These biscuits are little nuggets of nutrition.
Each crisp soda cracker contains energy for thirty minutes more work.
Many business men eat them at ten in the morning. So do school children at recess.
They're more nutritive than bread. You can eat them dry—or with milk.
Uneeda Biscuit are always crisp and delightful.
Never Sold in Bulk

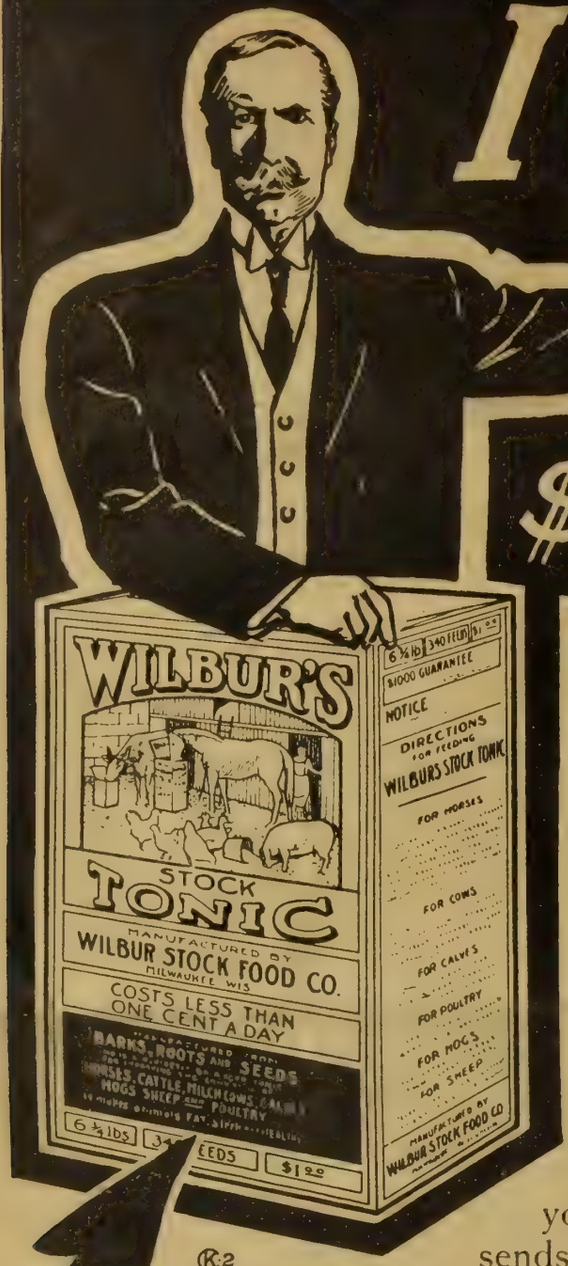
The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a neat, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Universal Magazine Bracelet.

I Want to Send You This $1.00 Box Free



I want you to know for yourself why

Wilbur's Stock Tonic

is fed by 500,000 stock raisers daily. I want you to see what it does for your horses, your milch cows, your hogs, your sheep and your poultry.

I want to prove to you beyond all doubt, that Wilbur's Stock Tonic is a wonderful feed saver, fattener and positive preventive of disease.

I want you to find out by actual test that my tonic makes money for you every time you feed it That's why I'll send this big box absolutely free to you and to every reader of this paper, who fills out and sends me the coupon shown below.

K2

I don't want you to pay me a cent for this big full size $1.00 box, now or at any other time.

I don't want you to do anything to earn it.

It is not a premium, but a gift, and my object in giving it to you is to let you prove to your own satisfaction that it is a feed saver and money maker for you. Is my offer fair?

Do you risk one cent by accepting this big box free? Is it worth a two-cent stamp? If so just fill out the coupon below, and mail today

What Others Say

Williamsport, Pa., May 17 1910.
Wilbur Stock Food Co.,
Milwaukee, Wis.

Gentlemen:—We have used one pail of your food for our two horses. It saved the life of one of them after everything else failed. Please give us price and terms on pails. Yours,
BOYS' INDUSTRIAL HOME,
T P. S. Wilson, Mgr.

Arkansas City, Kans Apr 5, 1910.
Wilbur Stock Food Co.,
Milwaukee, Wis.

Gentlemen:—Would like to know what the prices on one thousand pound lots would be. Have been feeding it about two months and think it is all it is claimed to be. Hoping to hear from you soon, I am, Respectfully,
BERT WILHELM, R.F.D. No.6

Stephens, Ark., Dec. 17, 1909.
Wilbur Stock Food Co., Milwaukee, Wis.

Dear Sirs:—You will find herewith enclosed money for the five pails of tonic. Will say, it is all you claim for it and more. I tried it on a sick calf, which was nearly dead with sores. The first dose relieved it and now it is alright. It is good for all kinds of stock. I found it cannot be beat. It is a God's blessing.
Yours truly, J. J. CARROLL.

and Stock GROWER

Our Seed Corn Premiums.

The seed corn premiums offered by The National Farmer and Stock Grower, crop of 1911, are advertised on page 30. We are furnishing subscribers small quantities of seed corn grown by famous corn breeders who have won many prizes. Any farmer may derive pleasure and profit by planting this seed, harvesting the crop and exhibiting selected ears of

corn at the shows. There is little to pay, nothing to lose, and much to gain. We have paid many premiums, the largest being seventy-five dollars for ten ears that won a first and championship prize at the Louisiana State Fair. Others have won lesser prizes, and some did not exhibit at all; in every instance they improved their knowledge of corn growing and obtained better crops than heretofore. Our supply of champion-grown seed corn is limited, and we certainly advise our patrons to secure their supply early. We do not furnish anyone over two pounds of seed corn, and later in the season may have to place the limit at one pound. See page 30.

Influence of Climate on Farm Products.

Variation in soils affect greatly the quality of products, but more does climate cause variations. This fact is coming to be more and more realized as experiments are made to determine climatic and soil effects on agricultural products.

Not long ago some scientists in California determined to find out why wheats grown in California deteriorate in milling quality. The State Experiment Station took up the matter and secured wheat soils from all parts of the United States, especially soils from fields that had long been growing wheat of good milling quality.

The results of the experiment showed that the soil did not greatly affect the quality of the wheat, but that the climate did. This series of experiments is valuable as being one more link in the great chain of experiences tending to show that climate is a thing whose influence cannot be overcome by any means of cultivation and fertilizing known to man.

We have another illustration of this in the changes that affect the macaroni or hard wheats. It was long ago found that the wheats grown in certain districts of Russia where the climate was cool and the atmosphere dry had a peculiar value for the making of a certain kind of pastry. Thence grew up the practice and business of macaroni making. A few other localities were also found adapted to the growing of this peculiar wheat rich in nitrogen.

Some farmers living in the moist, warm countries of Europe thought it would be nice to raise this kind of wheat and tried it. But it quickly deteriorated and became a wheat poor in nitrogen and as soft as the ordinary wheat they were in the habit of growing. After long experience on many farms it was learned that the climate is an asset that has a permanent value, and that even the undesirable climates have in them virtues for the production of certain crops.

English farmers have again and again tried to grow the hard wheat produced in Canada and the United States, but have always found their seed to rapidly deteriorate. So much is this the case that English millers find it hard to mill their wheat into the kind of flour they want without mixing it with the harder wheats imported from across the water.

The producing of the ordinary dahlia is a case in point. Originally all dahlias were single, as they were grown in quite warm climates. For a long time men tried to get double dahlias by all kinds of methods of cultivation, but in vain.

In the end, the double dahlia was secured by growing dahlias in cold, northern climates. The doubling was supposed to be due to the effort of nature to protect the seed from the cold. When double dahlia varieties are taken to the South they soon revert to the single variety again. This is a striking illustration of the impossibility of overcoming the fixed influences of heat and moisture in climates. This fact must be borne in mind in every move we make in the cultivation of plants. Because a plant does well under a certain system of cultivation is one locality is no proof that it will do equally well under the same system of cultivation in another climate.

Look Out For Argentine.

Serious preparations are being made for trade between the Argentine Republic of South America and New York City. The Texan, an American-built steamship, went from New York to Buenos Ayres in twenty days and returned in nineteen days. This steamer burned oil for fuel and is the first one to do so between North and South America.

The promoters of this trade all hope to see all customs duties taken off meats. Last year, when Congress gave South America the advantage of sending hides into the United States duty free, Congress also reduced the duty on beef from 2 cents to 1½ cents a pound. It is expected that the next cut at the tariff will take off the remaining 1½ cents a pound, so as to allow the South American beef raiser and the South American packer free and untaxed access to the United States markets. Farmers are very slow to understand what this means, but just as surely as the duty was taken off hides it will be taken off meats. Many members of Congress are advocating this now, and many of the largely circulated daily newspapers are in favor of sending the money out of the country for meats. Look out for Argentine. Argentine is a country with small population and an immense production of grain and meats.

Illinois Corn Awards.

From Champaign, Ill., on January 23d, it was reported that J. H. Thrash, of Tolono, won the Trophy for yellow corn in the Grain Show in connection with the Corn Growers' Convention at the University of Illinois.

The exhibitor showed ten ears of Reid's Yellow Dent, which was awarded the grand championship. R. A. James, of Charleston, had the winning white corn.

John Shilly, of Whiteside county, had the best oats, and T. F. Ellis, of Stephenson county, the best wheat.

The exhibits are entered in the National Corn Exposition at Columbus, O., and may again be heard from.

An Alfalfa Record.

"In 1902, F. S. Kirk, of Garfield county, Oklahoma, sowed a field near a creek, but about twenty-five feet above water, with thirty to thirty-five pounds of alfalfa seed per acre, broadcast. The soil, which he calls 'high bottom,' was a dark brown and contained considerable sand. For two years no attention was given the alfalfa except harvesting from it three crops the second year and four the third year. In 1905 he harvested from ten acres nine cuttings, estimated to weigh fully one and one-half tons each per acre. The longest time between any two cuttings was twenty-two days, and the shortest fourteen days. During the season of 1904 seven cuttings were made and the field was gone over with a disk harrow early each time after removing the hay from the field. It was possible to cut another growth of eight to twelve inches, had he not preferred to use it as pasturage for stock."—From Coburn's "The Book of Alfalfa."

"True popularity takes deep root and spreads itself wide; but the false falls away like blossoms; for nothing that is false can be lasting."—Cicero.

Heavy Fence
For Economy

WOVEN-WIRE FENCES must be heavy as they have to turn animals by sheer strength of the wire. A fence with barbs is protected from excessive pressure because the animal fears the barbs. Remove the barbs and the greatest strength of the animal is thrown upon the fence. Its wires must be larger and stronger. To have a long-life woven-wire fence the fence must be heavy.

AMERICAN FENCE

is a thoroughly galvanized square mesh fence of weight, strength and durability. Large wires are used and the whole fabric is woven together with the American hinged joint (patented)—the most substantial and flexible union possible. Both wires are positively locked and firmly held against side slip and yet are free to act like a hinge in yielding to pressure, returning quickly to place without bending or injuring the metal.

Dealers Everywhere—Stocks of American Fence are carried in every place where farm supplies are sold. The Fence is shipped to these points in carload lots, thereby securing the cheapest transportation, and the saving in freight thus made enables it to be sold at the lowest prices. Look for the American Fence dealer and get the substantial advantages he is enabled to offer. He is there to serve the purchaser in person, offer the variety of selection and save the buyer money in many ways.

FRANK BAACKES, Vice President and General Sales Agent

American Steel & Wire Company

Chicago New York Denver San Francisco

Send for copy of "American Fence News," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application.

GALLOWAY SAVES YOU $50 to $300

SAVE from $50 to $300 by buying your gasoline engine of 1¾ to 28-H.-P. from a real engine factory. Save dealer, jobber and catalogue house profit. No such offer as I make on the class of engine I sell has ever been made before in all Gasoline Engine history. Here is the secret and reason: I turn them out all alike by the thousands in my enormous modern factory, equipped with automatic machinery. I sell them direct to you for less money than some factories can make them at actual shop cost.

All you pay me for is actual raw material, labor and one small profit (and I buy my material in enormous quantities).

Anybody can afford and might just as well have a high grade engine when he can get in on a wholesale deal of this kind. I'm doing something that never was done before. Think of it! A price to you that is lower than dealers and jobbers can buy similar engines for, in carload lots, for spot cash.

An engine that is made so good in the factory that I will send it out anywhere in the U. S. without an expert to any inexperienced users, on 30 days' free trial, to test against any engine made of similar horse-power that sells for twice as much, and let him be the judge. **Sell your poorest horse and buy a**

5-H.-P. Only $119.50

Get Galloway's Biggest and Best FREE GASOLINE ENGINE BOOK

Write today for my beautiful new 50-page Engine Book in four colors, nothing like it ever printed before, full of valuable information, showing how I make them and how you can make more money with a gasoline engine on the farm. Write me—

BETTER CISTERNS --- WHY?

To protect the health of every member of your family. Medical experts have pronounced the brick and wood cistern to be the cause of many cases of sickness.

A Cistern to be perfectly sanitary must be made so tight that no impurities can possibly get through. This can only be accomplished by using the Steel Cistern.

NITRATE OF SODA ON THE FARM.

The Use of Nitrate Has Almost Trebled Since 1900—Only a Small Part of the Field is Yet Covered.

In 1900 the consumption of Nitrate in this country was one hundred and eighty thousand tons; for the twelve months ending June 30, 1910, the consumption was five hundred eighteen thousand tons.

This nearly triple increase in the use of Nitrate as a fertilizer in the United States is almost entirely due to the work of the Nitrate Propaganda, of which Dr. W. S. Myers is the head. This work, entirely missionary in its nature, has been carried on through farm papers. All the advertising has been done with the view of impressing the farmer with the importance of fertilizers in general and Nitrate in particular.

The Nitrate Propaganda does not attempt to reach the dealers, but the eyes of the farmers have been so opened to the need of Nitrate, and they have so persistently asked for it that dealers all over the United States now sell it. Despite its wide distribution only a small part of the possible field of demand for Nitrate is yet developed, and so during the next ten years the Nitrate sale should increase enormously.

The advertising of the Propaganda will be continued on a larger scale. New books on the cultivation of crops and their correct fertilization are being edited and published.

The books are based upon experiments by practical farmers and by experts of Experiment Stations. They are published for the purpose of showing the farmers how to make farming the one best occupation and to make clear the part that Nitrate plays in it.

This literature is authoritative; designed not to sell goods for profit, but to promote the use among farmers of the one profitable source of the great plant food—Nitrogen.

Leading Textile Fibers.

The United States Census Bureau furnishes interesting figures and facts relating to textile materials. Speaking of the world's supply, the Bureau states that the relative importance of these fibers has undergone considerable change during the past hundred years. Flax fiber, which was used to a larger extent in 1800, now ranks fourth, and the quantity of flax produced is only about three times what it was at that time. In the same period the production of wool has increased from about 500,000,000 pounds to nearly 2,700,000,000 pounds, or more than five-fold, and cotton has increased from about 300,000,000 pounds to 8,505,000,000 pounds, or more than twenty-eight fold. The increase in the production of jute is the most remarkable of all. The quantity in 1850 was 60,000,000 pounds, and increased to 2,918,000,000 pounds in 1909.

The increases since 1889 are as follows: Cotton, 44.8 per cent.; wool, 11.4 per cent.; silk, 112.3 per cent.; flax, 85.9 per cent.; and jute, 56.9 per cent.; while hemp shows a decrease. If the figures for 1908 were taken as the basis of comparison with 1889, the increase for cotton would be 81.8 per cent.

The total production for the year 1909 of the leading textile fibers was 17,529,174,000 pounds, of which cotton constituted 48.5 per cent.; wool, 15.3 per cent.; silk, less than one-half of 1 per cent.; flax, 10.6 per cent.; hemp, 8.2 per cent.; and jute, 16.6 per cent. The total supply of these textile fibers in commercial channels at the begnning of the nineteenth century amounted approximately to 1,400,000,000 pounds, of which cotton formed about 22 per cent.; wool, 33 per cent.; silk, 2 per cent.; and flax, 43 per cent.

In connection with a discussion of the various fibers, some interesting facts concerning the artificial silk industry are given. The number of establishments engaged in its production is estimated to be about thirty, of which the United States is credited with five. The world's production of artificial silk during the year covered by the report amounted to approximately 12,000,000 pounds, of which the United States consumed 882,000 pounds.

The World's Cotton.

From the Census Bureau we obtain the following information: The number of active cotton spindles in the world has increased from 105,681,000 in 1900 to 134,526,000 in 1910, or 27.3 per cent. The consumption of cotton per spindle was 79.9 pounds in 1900, and decreased to 67.2 pounds in 1910. This decrease has been due in part to the fact that the spindles were operated to a greater percentage of their capacity in 1900 than during the past year, yet the difference is probably due more largely to the increasing manufacture of finer goods.

The consumption of cotton during the year ending August 31, 1910, was 18,321,000 bales of 500 pounds gross weight, and this country usually furnishes two-thirds of the total supply.

Assuming that the consumption statistics for foreign countries have been returned in net-weight bales, and reducing the American consumption figures to net-weight bales, the world's consumption is estimated at 18,079,000 bales of 500 pounds.

The world's commercial production of cotton in 1909 amounted to 16,558,000 bales, or 1,521,000 bales less than the consumption for the year ending August 31, 1910. The world's consumption of cotton during the year ending August 31, 1909, amounted to 19,397,000 bales, and the capacity of the mills has since been increased by about 1,250,000 spindles. For this reason the potential consumption of the mills of the world at the present time is estimated to be not less than 20,000,000 bales. Furthermore, the stocks of manufactured goods have materially decreased, so that, in 1910, a world crop equal to this consumption requirement of 20,000,000 bales is needed. Of this the United States would be expected to contribute at least 13,500,000 bales, in order to keep the mills operating during the year and to prevent further reduction in the already low supply of raw cotton. This indicates that cotton growers can go on with their business without fear of overproduction in this or any other country.

Use Lime Freely.

Lime is not a fertilizer, but it plays a very important part in the life of plants and in the soils. It enters into the formation of plants to a limited extent and is very necessary. But it is most important as a neutralizer of the acid that is in much of our soils. There is no doubt that much of the unlimed land at the present time is producing much less than it would if it had a small supply of lime added to it. The investigations of the last twenty years have shown that a ton of ground lime rock applied per acre of land often works wonders by neutralizing the too abundant acids of the soils.

Some German scientists have been investigating the orchard conditions of one section of Germany and report that deficiency of lime or of potash lies at the base of much of the fruit failure there.

Not long ago an investigation in Virginia showed that some of the truck gardens were yielding very small returns, and that there was so much acid in the soil that the bacteria that perform the work of nitrification could not exist. An application of lime would have saved many harvests.

There are farmers that have been tilling acid land for a lifetime and getting nothing worth mentioning from it that would have been wealthy by this time if they had known enough to buy some lime, let it air slack and apply it to the land, or if they had applied ground lime rock to the land.

Long ago the English farmers learned the value of lime on their lands. They dug chalk from the hills, ground it and applied it to their land. Chalk is one form of lime rock. The English farmers applied as much as eight tons to the acre, under the impression that if a little was good, a good deal was better. They probably needed at that time only about a ton to the acre; but the big application lasted for a lifetime.

The land was thus kept sweet, and the small amount of lime the plants required was always in abundance.

Many of the older farms of the country that are reputed to be worn out are merely in such a sour condition that they will not permit the growth of leguminous plants, which condition can be removed by an application of lime in almost any form.

The fact is now so generally known among agricultural scientists that many of them are buying good farms at low prices, knowing that they can put on $2.00 worth of ground lime rock per acre and improve them in value $25 per acre.

Low lands are not the only ones that are sold. Many hillsides require the application of lime to neutralize the acid.

Farmers generally should test their soil to learn if it needs lime by growing some plants in limed soil and some in soil that has not been limed.

The five-acre apple orchard of Jack Lillis, Wenatchee, Washington, with 428 trees seven to nine years old, yielded 5,320 boxes of apples that sold for $7,812.25.

Sweet potatoes are selling wholesale in St. Louis at 60 to 75 cents a bushel.

$1.50 House Dress of Checked Percale $1.00

Postage Prepaid by Us

No. 21 L 12—"What would the material alone cost?" It would cost you $1.00, Madam, to say nothing of the making. The regular price of a house dress of this qualtity could never be less than $1.50—this special price of $1.00 is simply to acquaint you with "NATIONAL" values.

This one-piece dress is made of Checked Percale, and, first of all, it is made of excellent quality material that will launder well and wear splendidly. The front of the waist, where the closing is effected, has plaits at each shoulder stitched to yoke depth, which gives the necessary fullness to the model. The jaunty turned-down collar, the breast pocket and the buttoned cuffs that fasten the full-length sleeves are made of plain color material. A belt of the material joins the waist to the skirt, which closes at the left side front with pearl buttons. Skirt length about 40 inches. **Colors:** Blue and White check; or Black and White check.

Sizes: 32 to 44 bust.

It is a very easy thing to order this house dress Just put a one dollar bill in an envelope and **state the size and color desired.** We will send the dress to you at our risk of your being pleased.

Special friend-making price, **$1.00.**

This Spring Style Book is yours Free

THE A. I. ROOT CO., Box 72, Medina, Ohio.

Pork Product Exports.

Our export of pork products were 1,151,678,898 pounds in 1908; were 885,970,126 pounds in the year 1909, and only 637,894,088 pounds in 1910. This includes bacon, hams, fresh and salt pork and lard. The decrease is fully accounted for by the decrease in the number of hogs marketed, and the remarkable feature is that so much can be exported under the circumstances.

Australian Wool For United States.

United States Vice-Consul-General Henry D. Baker, located at Sydney, Australia, says:

"There has been much discussion in Australian commercial circles as to the possibility of developing trade in frozen meat and in fruit in the United States, where there appears to be complaint as to the high cost of living. Considerable attention has been paid to a published report from the British Consul-General at New York, in which it was mentioned that a consignment of 891 carcasses of frozen mutton arrived in New York from New Zealand, via London, and which sold at a profit after paying a customs duty of 1½ cents a pound.

"The meat before being forwarded was carefully trimmed and dressed, so that every element of waste was cut down to the minimum. In view of the reported success of this shipment it seems likely that in conjunction with local fruit producers, who also see important possibilities in the American market, some effort may be made shortly for direct shipment of Australian meat to New York under the same general conditions as to London."

CREDIT SUBSCRIPTIONS.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

The Price of Clothing.

According to "Fiber and Fabric," a paper published in the interest of the woolen trade, the value of the cloth in an overcoat selling at retail for $15 was $1.64, and the manufacturer's profit on the cloth was 9 cents. The difference between $1.64 and $15, a total of $13.36, has to be accounted for by the tailor and the retailer.

The Market For Oats.

At the close of business on January 31st, Chicago Board of Trade quotation for oats for May delivery was 33⅝ cents a bushel, and the July quotation closed at 33⅜ cents. Last year on same day May oats closed at 46¼ cents and July at 43¼ cents a bushel. In round figures, it is easy to see that oats are 10 to 13 cents a bushel lower than last year. The great crop of oats has depressed its own market, and there it is. The comparatively small proportion of oats actually sold in market in proportion to the total crop is easily obtained, and the people engaged in trade cannot see any reason for an advance in oats between now and July. There is not enough actual speculation in oats to advance or depress the market; nearly every purchase is for legitimate consumption.

The Chicago Market For Wheat.

If ever the United States admit wheat duty free the farmers of the United States will have cause to regret it; yet that is the exact proposition before Congress. When the Chicago Board of Trade closed on January 31st, wheat for May delivery was quoted at 96 cents a bushel; this was a fraction lower than the close on December 31st, 1910, and 15⅜ cents lower than a year ago.

The wheat market has its fluctuations, but the fact remains that farmers are receiving 15 to 25 cents a bushel less than they were a year ago. It is four long months to the close of the May opton, and within that period many changes are possible. There ought to be an advance of considerable size on the statistical condition, but the proposed legislation to admit foreign wheats duty free is likely to keep the market down. The duty on foreign wheat is 25 cents a bushel, and if it was removed it might not reduce the price of a loaf of bread to the consumer, but it would surely depress the market to the farmer. Wheat must always be considered a world's crop, sold upon the world's markets, and conditions in one country influencing the market in the others.

Argentine and United States Wheat Compared.

The United States with an average five-year wheat crop of 692,823,000 bushels, having eighty-five to ninety-five millions of people to feed, exported 15 per cent. of the crop, amounting to 104,923,400 bushels a year.

Argentine, with an average five-year crop of 159,166,000 bushels of wheat per year, and having but seven millions of people to feed, was enabled to spare 80 per cent., or 127,332,800 bushels a year, for export. It will therefore be seen that Argentine always has a surplus. The new proposition in Congress is to admit Argentine wheat duty free in order to depress the United States market to a greater extent than it is now depressed. Farmers who object to this duty-free admission of foreign wheats had better get after their Congressmen and Senators without delay.

Growing Big, Red Strawberries.

We have often wondered why so few farmers and city property owners that have a garden patch grow strawberries. The cost for plants is so small, the labor required so small, and the space to grow them on is so small that it seems to us every household ought to grow at least enough strawberries for their own use, as they are certainly the most handsome and delicious fruit of all. They are also practically a sure crop. We seldom get a full crop, but even half a crop is a big yield. They bloom later than most fruits, and as their blooming season lasts fully three weeks, a frost will seldom harm them a great deal, as a frost during blooming time will only harm the blossoms that are out at that time, while most other fruits send out practically all of their blossoms at one time, and a frost or cold-beating rain at the critical time will kill the whole crop.

Why So Many Make a Failure.

A great many people when they set out a strawberry patch get their plants from a neighbor, and usually get them for nothing. They are dug from an old, exhausted, run-out patch, and the results are disappointing. We also find in our visits to farmers and others that try to grow strawberries that their vines look healthy and grow well but bear little or no fruit. We invariably find that the variety is a pistillate or female variety, which will not bear fruit to speak of unless they are set by the side of bisexual or male varieties, that the blossoms might be fertilized by the pollen that grows only on the bisexual varieties. Few people understand the sex in strawberries, and as many plants are bought from nurseries that make strawberry plants only a side line and do not instruct their customers as to this, and sometimes plants are bought from traveling salesmen that don't understand the business, and here is where so much disappointment comes in; but if you buy your plants from a grower that makes strawberries a specialty, and you get his catalogue, it will give you all the information that is required, and we have always found these growers reliable.

Some Valuable New Varieties.

Among the valuable new varieties we might name the St. Louis as an extra early berry; the Buster and the W. W. W., or Three W.'s, as medium varieties; and the Chesapeake as a late variety. These are among the very best that seem to do well the country over, and with good culture will yield from 5,000 to 10,000 quarts of fine fruit per acre. Good, new plants are very easily transplanted without any risk, when they are dug early in spring, as this is the only time to set out strawberries. The plants may be safely shipped across the continent, and when properly set out will invariably all grow. The soil should be thoroughly worked as early in spring as the ground will work well and then keep on working it all through the season; never allow it to become hard or baked, but keep a dust mulch on top all the time if you can. Strawberries will respond readily to good culture and plenty of manure. Pinch off all blooms the first year, as bearing the first year will exhaust the plants too much. A strawberry bed should only be allowed to stand two years. Look up the advertisements in this journal, send for the catalogues of plant growers and set out a strawberry bed this spring. You certainly will enjoy the big, red fellows when the crop comes on.—A. C. LeDuc, Chenoa, Ill.

Amazing "DETROIT"

Only $45.00 and up. The "DETROIT" is the **only** engine that handles **coal oil** successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Basic patent—only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h.p., in stock ready to ship. Engine tested just before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric-lighting plant.

Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate amazing, money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, we will allow you **Special Extra-Low Introductory** price. Write!

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

A New Phase of Climate Study.

The eternal variations of climate are not accidental. They come in accordance with the operation of fixed laws. The blowing of the winds and the movements of waves of heat and cold are in response to the laws of the atmosphere, which are little by little being discovered.

The latest phase of this study to become widely public is that concerning annual variations in air pressure. A world-wide study is being made of the air pressures, or of the average air pressures, and many things are being brought to light. It is found among other things that there are great waves of pressure moving very slowly and corresponding, as it were, to the great tidal waves that sweep across the oceans. But while the water waves pass with great rapidity, the waves of air pressure move with great slowness. It takes some of these waves three years to pass across the United States. At the same rate it would take some of these waves twelve years to pass around the globe, if they moved in one direction.

High pressure and low pressure are constantly being indicated on our weather report maps, because these pressures indicate something of what may be expected on the movement of the winds and of the waves of cold and heat. Some of these centers of air pressure move across the country in a few days. They should, however, not be confounded with the air pressures referred to above. They are no more like the great, slow-moving wave of air pressure than the waves seen on the ocean are like the great tidal waves that cause the rise and fall of the tides. The little waves visible to the eye move in response to the wind, sometimes in one direction and sometimes to the other; but the great tidal waves move always in one direction, and are so wide and long as to be visible to man only when he stands on the shore of an ocean and sees the tide rising or falling.

The rise of the ocean tides is supposed to be due to the influences of the moon, and the movement of the great air-pressure waves may be due to influences outside of our earth. A relation has been seen between them and the sun spots, but the sun spots themselves may be caused by influences outside of the sun.

The ocean tides have been studied and nautical almanacs tell to a minute the effect to be expected on each coast of the world. This is a great help to mariners and to the commerce of the world. It is probable that the pressure of the air will be charted to an extent that will enable us to know exactly what to expect in the way of air pressure, and hence in the way of certain modification in the climate.

It may be called to mind in this connection that it has frequently been claimed that variations of climate seem to run in series of eleven years. The writer does not know how good this claim is, but it seems to run parallel with the new developments in air-pressure study, which fixes about that period for the passage of some of the air-pressure waves around the earth.

Ultimately the farmer may know what to expect each winter as to cold and snow, and what to expect each summer as to drouth and rain. This will give him a further mastery of conditions and enable him to provide against crop disasters.

A Surprise For Farmers.

All customs duties on farm products are to be taken off by the newly-elected Congress. That is what the new Congress was elected for. That is what the city people are crying for, and directly this is done they expect to get flour for two dollars a barrel, beefsteak for 10 cents a pound, wool for 10 cents a pound, butter for 15 cents a pound, and everything they eat for half what it costs now.

Before the election nothing was heard of this. The farmer was requested to vote against all kinds of abuses and misgovernment by the party in power; but the cry of "Take down the bars and let in foreign foodstuffs to flood our markets," was the result of the election, although it did not appear on the original programme.

Before the election they were talking mostly about the rubber schedule, and what they said about removing duties on farmers' products was not very loud in farmers' districts.

The new Congress is expected to pass a law to take off the duty on cattle, hogs and sheep. The new Congress is expected to take off the duty of 30 cents a bushel on barley; to take off the 15-cent-a-bushel duty on corn; the 15-cent-a-bushel duty on oats; the 25-cent duty per bushel on wheat; the 6-cents-a-pound duty on butter and cheese; the $4.00-a-ton duty on hay; the 5-cents-a-dozen duty on eggs; and a long list of other duties, including the 1½ cents a pound on dressed beef.

Take up the city papers and read the crazy talk about feeding the American people with foreign productions, just as though shiploads were being held outside, waiting to be dumped on the New York market. Anyone would suppose that the American farmers had starved the American people.

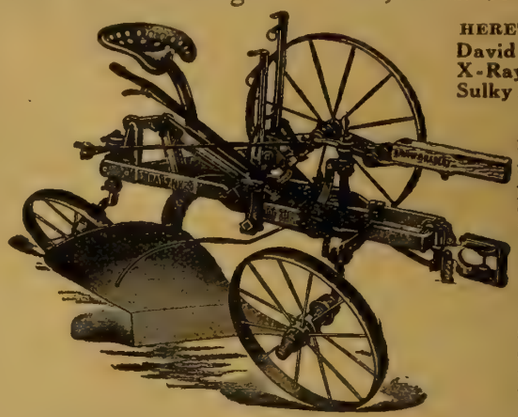
This is not a political paper, neither is it a prohibitive-tariff paper; but we are in favor of there being such duties on farm products as will give the advantage of the American market to American farmers, and that all foreign grain, hay, meats, eggs and vegetables entering this country from foreign ports shall contribute, as we contribute, to the support of the American government, and then let them come and stand the test of the market.

If farmers allow Congress to do so, Congress will reduce the duties on farm products just as there is some necessity for them to remain. If farmers allow these duties to be taken away, they will surely regret it. Not one single duty should be removed without removing the Congressmen who vote for them.

DAVID BRADLEY

ONCE upon a time it may have been necessary to pay a *high price* for a *good name* on a farm implement, but those days are past. Our purchase of the great David Bradley plant put the price question on a *business basis.*

¶ *Business*, to us, is not a matter of taking all we can get and giving as little as possible—it's our idea to give *all we can*, because we know by experience in dealing with farmers that the *more* we give in *value*, the more we get in *volume.*



HERE'S AN EXAMPLE:
David Bradley X-Rays No. 2 Sulky Plow - - **$29.75** Complete

Even if other manufacturers knew how to make as good a plow, they couldn't do it, because the features which make the David Bradley X-Rays No. 2 the best of all sulky plows are patented, and these patents owned exclusively by us. No one can equal the X-Rays No. 2.

Frame is heavy ⅝-inch steel; can't spring in hardest ground.
Strong high wheels; 9-inch bearing Bradley patent dustproof magazine hubs. One oiling does for 40 acres.
High Foot Lift. The slightest tread of any boy old enough to drive raises plow point 7 inches from ground with team at a standstill.
Short Hitch. Team coupled up close; **no side draft.** Turns square corners either way, plow in or out of ground.
The best plow for stony ground. Bottom can be left to float and dodge; need not be locked in ground; suction of share holds it there. **For side hill work it can't be beat,** because furrow wheels can be adjusted from the seat with team in motion.
Bradley Patent Spring Clevis lightens all jars; makes it easier for plow, man and team. Your horses' shoulders never sore.
Bottoms. The celebrated David Bradley Garden City Clipper, the best by seventy-nine years' test. Any size or shape you need.
These are but a few of the many advantages of the **X-Rays No. 2** over all others.

¶ Refer to our big General Catalog for pictures, complete descriptions and prices of David Bradley Plows, Harrows, Planters, Cultivators, etc., the farm tools **backed by eighty years of knowing how;** or send today for our Book of David Bradley Farm Implements.

We can always supply promptly any repair part for any Bradley implement, no matter when or where bought.

SEARS, ROEBUCK AND CO. CHICAGO

Please mention National Farmer and Stock Grower.

The surprise for farmers is an afterthought, but it will be brought about unless farmers fight out the battle with their own representatives.

Best Laying Chickens.

"Chickens with short toe nails are the best egg layers," said Prof. J. E. Rice, Poultry Expert for Cornell University, addressing students of the Agricultural College of the University of Missouri.

"These chickens have short toe nails," he said, "from continuous scratching for food, and a chicken that is constantly scratching for food is sure to be industrious."

The hen of the olden time, Prof. Rice said, laid an average of only eighteen eggs a year, while the modern hen of pure breeding will lay from 100 to 200 eggs annually.

Our premium offers are valuable.

The Easy Louden Way

The harder you work the **Louden Hay Carrier** and the heavier you load it, the better it shows up. You can't break it down—years of hard service won't send the

LOUDEN HAY CARRIER

to the repair shop. It lasts a lifetime. Its lock has a square catch and cannot possibly wedge or fail to work. The powerful wheel arms will never spread. All twist and kink are let out of the rope by our simple patented rope swivel, the only successful swivel on the market. Won't bind on the track, has adjustable stops.

The **Louden Balance Grapple Fork** is the best fork ever built. Will handle dry clover, alfalfa or thrashed straw where all others fail. The **Louden Hay Carrier** and **Louden Grapple Fork** will work in any barn and handle all kinds of hay with more satisfaction than any others. See them at your dealer's—if he does not have them, write us.

Send for catalog of complete barn and cow stable fixtures—**Hay Carriers, Door Hangers, Litter and Feed Carriers, Cow Stalls, Cow Stanchions** etc.—also our FREE BOOK on the value of manure and how to care for it.

Changes That Go On in the Soil.

Most people think of soils as having a fixed character, so far as plant food is concerned. They think that the virgin soil has been for thousands of years in the condition in which it was found. But every soil changes its character somewhat annually, and is never the same from year to year.

Often the best soil is subject to greater changes than the poorer soil. Take, for instance, the virgin soil—soil that has never been cultivated. It is well known that such soil often does not respond quickly to the work of the plowman. This is largely because it is packed so closely that the soil elements cannot act rapidly. When it has been cultivated for a few years the air has been let in, plant remains have been plowed in, perhaps manure has been incorporated with the soil. The carbon in the form of organic matter has been placed in the soil and helps the work of the bacteria. Changes that were slow in the first condition of that soil are now rendered rapid, and good crops begin to be produced. Previous to that time the chemical food elements were in the soil, but conditions were not favorable to their removal. The facilities for change have increased the production of crops.

Under the best conditions for plant growth changes go on in the soil with great rapidity. In warm countries, where the soil is deep and rich, these changes are constant and of great intensity.

We have an illustration in the great market gardens around Paris, France. These are farmed on the very intensive plan, and several crops are taken off each year. Yet frequently these gardens in the middle of the summer will give out, although they are supplied with water and fertilizer. A few years ago an analysis of the soil of one of these gardens was made at the time it failed to produce the crop demanded of it. It was found to be very deficient in soluble plant food. The crop's demands on the soil had been in excess of the elaboration of plant food, in spite of the fact that the materials for plant food had been supplied to the soil.

It was a striking illustration of the fact that it takes time for the soil agencies to perform their work. The bacteria and chemical forces in the soil had not been able to produce plant food as fast as the gardeners and truck growers were demanding it, and the plants they were looking for did not develop to the point where they would be salable.

There are many factors in the soil that are concerned with the production of plant food. It is not enough that there be bacteria to do the work of changing latent plant food to available plant food. The bacteria must themselves have organic carbon to feed upon as a part of their ration. Then there must be a certain amount of air used and this comes into the soil but slowly. The looser the soil the more rapidly does the air come in when the water is out of the soil.

Then there must be the presence of water enough to coat with a film the soil particles, but not so much that the space between the soil particles will be filled with water. In saturated soil the action of certain classes of bacteria ceases altogether, till the water drains away. The wetness of the soil thus often interferes with the elaboration of plant food in the soil, and this is a factor that frequently cuts short the crops of a season.

American Apples in England.

The United States Consul at Manchester, England, reports as follows to the Department of Commerce and Labor:

"The Manchester apple sales are an important institution in the fruit trade of the north of England. The sales are conducted at public auction.

"A large shipment of American apples from Boston was received, and I attended the sale. There was a satisfactory attendance of the trade, some 500 of the largest wholesale fruit dealers, from Lancashire, Yorkshire and the Midland towns, being present.

"The following apples were put up for auction: American Maine, 5,520 barrels; Virginian, 1,440 barrels; fancy Albemarle Pippins, 320 barrels; Western New York Greenings, 320 barrels; Western New York Baldwins, 366 barrels; Oregon Newtown Pippins, 3,170 boxes; California Newtown Pippins, 640 boxes. There being keen competition for these apples, on account of the large and profitable Christmas demand, they were all sold and brought remunerative prices.

"The Albemarle Pippins, which sold for $7.05 per barrel, tight packed, and $6.68 per barrel for eleven barrels, slack packed, were, I was informed, the finest fruit seen in Manchester this season, for they had been carefully graded and splendidly packed.

"At this sale I noticed that many brands of apples were packed in old flour barrels; this practice is chiefly carried on in the Boston packed apples. The apples are sold from sample barrels exhibited in the auction room, and many of such showed quite a covering of flour on the top layer of the apples. This is decidedly detrimental to the sale. The price obtainable for apples packed in new standard-sized barrels will more than compensate packers and growers for the extra cost of new barrels against the old flour barrels.

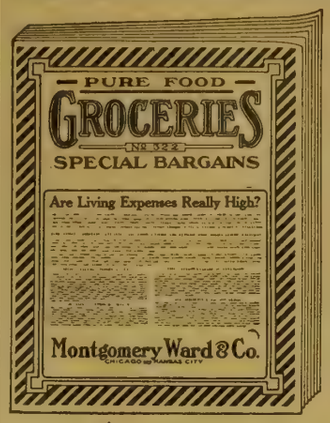
"California Newtown Pippins, first quality, $1.64 per box; Albemarle Pippins, $7.05 per barrel, tight, and $6.68 per barrel, slack.

"Virginian: Fancy York Imperial, $6.56 and $6.68 per barrel, tight, and $6.08 per barrel slack; Virginia Beauty, $6.56 per barrel, tight; York Imperial, $5.71 and $6.20 per barrel, tight.

Western New York: Baldwins, quality rather inferior and condition a little wasty, $5.35 and $5.50 per barrel, tight; Greenings, very fine fruit, clear, and well graded, $5.50 and $5.95 per barrel, tight; extra fancy Baldwins, poor quality, showed waste, $4.50, $4.98, and $5.10 per barrel, tight.

"American Maine: No. 1 Baldwins, very good quality, $5.47 and $5.59 per barrel, tight, and $5.10 per barrel, slack; Spys, showed waste, $3.89 per barrel, slack; No. 1 Ben Davis, $4.74 to $4.86 per barrel, tight; Stark, very good fruit, well graded, $5.47 per barrel, tight."

You Should Have



A COPY OF THIS

Grocery List

because it introduces you to better groceries than you have been buying, at lower prices than you have ever paid.

SEND FOR IT AND PROVE WHAT WE SAY

It costs you nothing and it will reduce the cost of your living from 15 per cent to 30 per cent on every bill of groceries you buy. It should save you $100.00 a year at least.

How We Reduce the Cost of Living

We buy from the producers, in carload lots and for cash. In most cases our purchases are made under special contracts which secure for us less than market price.

To these low prices, lower than your dealer ever hears of, we add one small profit to cover cost of handling. That is our price to you.

WE INVITE COMPARISON OF THE QUALITY OF OUR GOODS, at our low prices, with any you can buy anywhere. We know positively and our steady customers know that we are selling better qualities at far lower prices than they can get elsewhere. The daily increase in our business, caused by the hearty recommendations of our satisfied patrons, proves all we claim. We want to add your name to that list of patrons.

Let Us Send You Our Grocery List

COMPARE THE PRICES YOU FIND THERE WITH WHAT YOU NOW PAY

Send Us a Trial Order and test the quality of our goods. If they are not fully up to your expectation, satisfactory in every way, send them back at our expense and we will refund your money at once. So sure are we that you will keep the goods that we cheerfully make this offer.

Address a postal to the house nearest you, 19th and Campbell Sts., Kansas City, or Chicago Avenue Bridge, Chicago. The list will arrive by return mail.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

"Tell me one thing which being done on the farm will insure success." That was asked of a practical farmer by a beginner, who did not expect an answer; but the answer was: "Prepare for your work in advance, to be ready for emergencies."

The most valuable service a farmer can render himself next to working his farm is to keep a daily record of rain, temperature and work done. Comparisons, one year with another, are just as interesting as they are valuable.

Great Breeders' Horse Sale.

The Breeders' Horse Sale at Bloomington, Ill., on February 28th and March 1st, 2d and 3d, is the second sale of the season. The first was one of the most successful sales on record. The sale included a team of Percheron mares sold for $2,000, a draft stallion sold for $1,250 and 450 head at various prices. These sales are remarkable on account of the great variety of fine horses on sale, and the purchaser has an opportunity to select the exact horse he needs at reasonable valuation. The sale includes pure-bred Percherons, Belgians, French Draft, Shires and Clydesdales. The grade list draft, saddle, harness, farm and all-purpose horses, not fogetting the Shetland ponies. There is time to send for a catalogue. Address, C. W. Hurt, Manager, Arrowsmith, Ill.

Potash pays the farmer, and he can now buy potash direct from the mines. Many farms need potash, and potash alone, and there is no need to buy other ingredients in order to get a scanty supply of potash. Buy your potash direct. See page 19.

Read the article on page 6 entitled "A Surprise For Farmers" and be surprised. Free corn, free beef, free butter, is now the cry; not that the people expect to get wheat, corn, beef and butter free, but they expect to bring in foreign wheat, corn, beef, butter, etc., free of duty to compete with United States products which have been highly taxed in their production, and so reduce prices all round.

Please read about our rose premiums. We are using the same collection that we did last year. It is by far the best collection ever brought together as a subscription premium. See page 19.

Our corn premiums within the past three years have started ten thousand experimental plots of corn on farms all over this country. These plots have had a widespread influence towards improved corn growing. See page 30.

Stuffing Fertilizers.

The practice of robbing fertilizers of nitrogen and potash and making up the commercial deficiency in phosphoric acid is commented upon in Bulletin No. 142, issued by the Mississippi Agriculutural Experiment Station.

Dan Patch as a Breeder.

All of our readers ought to send for the beautiful painting of Dan Patch, 1:55, the champion light-harness horse of the world. It requires only the answers to three questions to get it. See page 29. Dan Patch is about fourteen years old, and he is sire of nine pacers in the 3:10 list. The famous Bingen, who is three years older, has the same number, six of whom are trotters. Dan Patch adds to his fame every year, and his picture is greatly valued and admired.

A South Africa Land Bank.

Natal, in South Africa, has established a land bank for the purpose of loaning money to farmers at four per cent. interest. Our readers will remember that The National Farmer and Stock Grower advocated this several years ago. Farmers in the West are paying too much interest on their mortgages.

Superior Post Hole Auger.

Iwan Brothers, Box 23, South Bend, Indiana, invite attention of our readers to the very superior auger which is adapted to making fence and telephone post holes, as well as for digging wells. The booklet "Easy Digging" will be sent free on request.

Clarke Reibel, of Arbela, Mo., won second prize at the Missouri State Fair of 1910 and with the same corn he won third prize at the State Corn Show held recently at Columbia. This was with corn grown from Clore's Johnson County White, furnished as a subscription premium.

Discriminating Legislation.

At the meeting of the American National Live Stock Association, held recently at Fort Worth, Texas, a resolution was adopted to the effect that they condemned as unjust, unfair and discriminatory the action of Congress in the Payne-Aldridge bill in placing hides on the free list.

Mixing Fertilizers.

Out of twenty-nine samples of fertilizers sold by the Pioneer Fertilizer Company of Florence, Ala., and examined by the Mississippi Agricultural College, fourteen samples were as much as 8 per cent. deficient in nitrogen and six were deficient to the same extent in potash. Some of this deficiency was made up commercially in phosphoric acid, but eight samples of the total were not up to commercial value as represented. This is taken from Farmers' Bulletin No. 142.

On February 1st, at St. Louis, turnips were selling as follows: Homegrown, 50 to 55 cents per bushel for washed; Northern, 75 cents per 100 pounds; 50 cents per bushel for washed; Southern, 20 to 30 cents per dozen bunches.

Mr. L. W. Travis, of R. F. D. 2, Martin, Tenn., has a few of what he calls the Slate or Blue Turkey. He wishes to get a pair from another farm.

BUTTERCUP CREAM SEPARATOR
MOST PROFITABLE WORKERS ON THE FARM
WATERLOO BOY GASOLINE ENGINES
Farmers Combination Offer

BUTTERCUP CREAM SEPARATOR WATERLOO BOY GASOLINE ENGINE

THE PRICE MAKERS

For 17 years we have manufactured **Waterloo Boy** gasoline engines

We have made them so well, they have given such good satisfaction and we have sold so many at such reasonable prices that we have compelled others to sell their gasoline engines cheaper. They had to do it or quit business.

We have saved the farmer both time and money. Every year has marked improvements in the **Waterloo Boy.** For 17 years we have kept every promise we ever made in any of our advertisements. We will continue to do so in the future. For 17 years the **Waterloo Boy** has made good. It has been a reliable hired man. It has not failed in cold weather. It has been reasonable in Price, Simple and Durable in Service. The **Waterloo Boy** *Makes Good.*

A Clean Record. Standing on this Clean, Honorable Record, we now offer to the farmers the **Buttercup Cream Saparator,** a high grade, standard machine, Close Skimmer, Easy Runner and Durable. In Price, Quality and Service a fit companion for the **Waterloo Boy.**

A GASOLINE ENGINE and a CREAM SEPARATOR—the two most profitable workers on the farm—the big money makers on the farm—together they make a strong combination. These two machines,—a 1½ horse WATERLOO BOY engine, and the best standard CREAM SEPARATOR—for a little more than the price of a cream separator ALONE. Does that sound good to you? If you are interested write us.

WATERLOO GASOLINE ENGINE CO., 228 West 3rd Ave., Waterloo, Iowa.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WEBER IMPLEMENT AND AUTO CO., 1900 Locust Street, St. Louis, Mo.

Try Nitrate of Soda.

Our readers are invited by Dr. Wm. S. Myers, 71 Nassau street, New York City, to make a trial experiment with nitrate of soda in order to demonstrate its value as a fertilizer. Nitrate of soda is the principal source of nitrogen in commercial manures, which is absolutely necessary to the growth of plants. It will pay any of our readers to address Dr. Myers and ask for the instructions and conditions under which he will furnish the nitrate of soda for an experiment. See card on page 5.

Grinder on Free Trial

10 Machines in 1

Hard Enough to Scratch the Diamond

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this genuine Alectride Farm Tool Grinder. Alectride is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Alectride **never** wears out. It does not glaze over. I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement and I will mail at once circulars explaining every detail of the ofier I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise

I merely want to place this Genuine Alectride Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Alectride (made of the substance of precious stones) sharpens your tools in from one-fourth to one-twenty-fifth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this machine the most severe tests—then unless you think that you positively cannot get along without this Alectride Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Alectride is really manufactured precious stones. It is even *harder* than the hardest diamond. Alectride will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

Harman Supply Co., 160 Harrison St., Dept. 3132, Chicago, Ill.

10 MACHINES IN 1

1 One Sickle Grinder Wheel (improved)
2 One Fine Grinding Wheel (improved)
3 One Coarse Grinding Wheel (improved)
4 One Harman Special Oil Stone (improved)
5 One Saw Gummer (improved)
6 One Sickle Holding Attachment
7 One Scythe Stone (New)
8 One Harmon Special Razor Hone (New)
9 One Disc Grinding Attachment (New)
10 One Tool Rest

Another Breed of Oats.

Messrs. Garton Bros., of Warrington, England, are renowned as breeders and improvers of seed grains. Their improvements in oats alone have placed them in the foremost ranks of agricultural specialists. Professors of Agriculture who have devoted their lives to agricultural advancement admit the wonderful benefits derived from the Warrington seed farm. During the past season Messrs. Garton have introduced a new breed of black oats. Victor is the name. The Victor is the largest-grained black oat and the blackest-skinned oat in cultivation. Especially suitable for early sowing, owing to its extreme hardiness. The amount of protein or flesh-forming constituents which the grain contains makes it 25 per cent. more valuable for feeding purposes than any other oats grown.

It will be remembered that a few seasons ago we offered some sample oats produced by Messrs. Garton as a subscription premium and offered some prizes at State and National Fairs and Expositions. We consider a small quantity of the Victor oats capable of reproducing itself, so that our patrons can win prizes if they will exhibit the product in any state. We therefore advise our friends and patrons to at least obtain sufficient of these black oats for experimental purposes.

Do you wish to win prizes? If so, send us a dollar for two-years' subscription to The National Farmer and Stock Grower. We will also send you two pounds of Victor oats. From this you can raise your own seed hereafter and win prizes at County, State and National Fairs. We offer the same premiums that we do for corn on page 30. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The New York Mercantile Exchange has adopted a resolution favoring the admission of Canadian farm products free of duty.

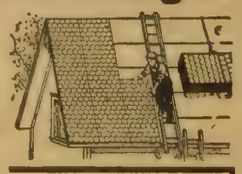
Edwards Interlocking "Reo" Steel Shingles

Need No Repairs! They Last as Long as the Building



They are stamped of best Bessemer Steel 5 to 12 feet long and 24 inches wide. They are made either in plain steel, painted on both sides, or heavily galvanized. They will not rust nor corrode. The interlocking feature covers the nails and provides for expansion or contraction.

Put Them On Yourself

Anyone can lay these shingles on any roof. Just a hammer and a few nails is all you need.

Edwards Interlocking Reo Steel Shingles will save money for you. They will last longer than wood-shingle or composition roofs and give you absolute protection against fire and lightning. We give a $10,000 guarantee bond that no roof covered with Reo Steel Shingles will be destroyed by lightning.

Factory Prices—Freight Prepaid

Being the largest manufacturers of every kind of iron and steel roofing material, we are in a position to quote you lowest possible manufacturer-to-user prices.

Write for New Catalog 257 which gives valuable information you should have. You can save money and have a better roof by buying Edwards Interlocking Reo Steel Shingles. Send us dimensions of your building and we will quote you cost of a Reo Steel Shingle Roof delivered at your railroad station. (36)

Too Much Butter-fat?

The motive which, above all others, appealed to the law-makers of Minnesota, when they enacted that milk sold for food should contain not less than three and a half per cent. of butter-fat, was the protection of children from the use of impoverished milk. The popular idea has been that, the richer the milk in butter-fat, the better it is for the child. There were some who claimed that the Minnesota standard should be set even higher.

There are some wise mothers, however, who have learned that the milk of the cows most prized in the dairy is too rich to be fed, in its natural state, to young children; and that it is better to dilute it, for their use, with a liberal amount—say one-quarter to one-half, or even three-fifths—of warm water.

The judgment from these mothers is supported by the authority of T. L. Haecker, Professor of Dairy Husbandry and Animal Nutrition in the Minnesota College of Agriculture, who declares that milk of the standard now required in this state is too rich for the stomachs of children.

Prof. Haecker has arrived at this conclusion as the result of a series of observations, on both children and young animals, covering a long period. He found, first, that children throve better on milk containing but a comparatively small amount of butter-fat than upon the "richer" milk of the pure-bred cows at the Experiment Station.

While no one can be more zealous than is Prof. Haecker in advocating the breeding of cows capable of a high production of milk rich in butter-fat, for the manufacture of butter, he thinks that a mistake is made in feeding such rich milk, undiluted, to children. What is not best for calves can hardly be considered best for children. He finds that if the calf of a cow whose milk is very rich in butter-fat is allowed to nurse at will, the breeder is very likely to have a bad case of indigestion on his hands the next day, if he is not minus a calf.

It would appear that the surpassing richness of the milk of certain breeds of cattle is the result of a gradual, long-continued departure from natural conditions under which the milk, while less valuable for butter-making, was on the whole better adapted to the use of growing children; and that a return to those conditions might therefore contribute something to the cause of health and the reduction of infant mortality. It is suggested, also, that if the attention now given to securing "three and a half per cent. butter-fat," in all milk sold to the public, should be diverted to securing greater purity, through scrupulous cleanliness in all the operations of the dairy, the gain to the children would be further perceptible.—C. R. Barnes, University Farm, St. Paul, Minn.

Ayrshire Breeders' Officers.

At the Thirty-sixth Annual Meeting of the Ayrshire Breeders' Association, held at Hotel Manhattan, New York, the election of officers resulted in the choice of Mr. John R. Valentine, Bryn Mawr, Pa., President; Dr. J. A. Ness, Auburn, Me.; George E. Pike, Gouverneur, N. Y.; J. W. Clise, Seattle, Washington; J. W. Ogden, Morristown, N. J., Vice-Presidents; C. M. Winslow, Brandon, Vt., Secretary and Treasurer; George H. Yeaton, Dover, N. H., Auditor; Charles H. Hayes, Portsmouth, N. H., and John W. Oakey, Bryn Mawr, Pa., Executive Committee, for three years.

Illinois Farms.

According to the census, there are 250,853 farms in Illinois. White farmers conduct 249,439 and colored farmers 1,414. Owners conduct 88,767 farms that are free and clear of incumbrance, and owners conduct 55,697 farms that are mortgaged. There are 2,390 farms operated by managers and 103,999 by tenants.

There are 19,613 Illinois farms of 19 acres and under; 33,243 ranging from 20 to 49 acres; 57,850 of 50 to 99 acres; 80,444 of 100 to 174 acres; 57,661 farms of 175 to 499 acres; 1,840 farms 500 to 999 acres in extent, and 202 farms 1,000 acres and over.

The average size of an Illinois farm is 129 acres. The total area is 32,471,000 acres, of which 86 per cent., or 28,005,000 acres, are improved. Average value of land is $94.90 per acre, and average value of buildings $13.23 per acre. In the year 1910 the amount of $35,675,000 was expended for farm labor and $571,000 for fertilizers.

In ten years the number of farms decreased 1 per cent.; the improved acreage improved 4 per cent.; value of land increased 104 per cent; value of buildings increased 71 per cent.; value of implements and machinery increased 64 per cent.; expenditures for labor increased 61 per cent.; and for fertilizers increased 31 per cent.

SOME OF THE REASONS WHY the United States Separator

Is the BEST in the World.

The United States Separator employs a feeding device to deliver the whole milk beyond the cream zone—preventing any remixing of cream and skimmilk and any conflict of currents. **No other device of any other Separator will do this work so well, as the records show.** This device is patented, and can be used on no other Separator.

The United States uses non-aligned channels for the currents of milk through the separator bowl. This is covered by strong patents. **No discs or other construction can equal its perfection in separation.** It won the world's record for skimming, in 50 consecutive runs continuing 30 days, with the milk of ten different breeds of cows, .0138 of one per cent.

99 $\frac{99}{100}$ of the creameries use cream gathered from United States Separators—**and are eager for more.** Cream from the United States is smooth and perfect for butter making.

The United States skims cleaner, runs easier, washes easier and lasts longer than any other separator. Ask the man who runs one. Ask us for catalogue No. **125** at once.

VERMONT FARM MACHINE CO., BELLOWS FALLS, VERMONT.
Distributing warehouses in every dairy section of the U. S. and Canada.

Please mention National Farmer and Stock Grower.

Decreased Oleo Exports.

Increase in home consumption of oleomargarine is in evidence by the decreased export of oleo oil. In 1908 the total amount exported was 195,097,705 pounds. In 1909 the exports of oleo oil were 161,028,099 pounds, and in the year 1910 oleo oil exports were reduced to 104,812,647 pounds.

Missouri Farms.

According to the census, the state of Missouri has 276,081 farms, conducted by 272,435 white and 3,646 colored farmers. Of the 276,081 farms in Missouri, 103,352 occupied by the owners are free and clear of debt, and 88,211 are mortgaged. Of the total, 1,985 are conducted by managers and 82,533 are occupied by tenants.

In the state of Missouri there are 19,283 farms of 19 acres and under; 47,134 farms in extent from 20 to 49 acres; 74,001 from 50 to 99 acres; 79,871 from 100 to 174 acres; 51,829 from 175 to 449 acres; 3,421 farms from 500 to 999 acres; and 542 farms of an extent of 1,000 acres or over.

The average size of a Missouri farm is 125 acres. The total area is 34,516,000 acres, of which 71 per cent., or 24,528,000, are improved; average value of land, $41.76 per acre, and average value of buildings $7.80 per acre. In the census year $18,526,000 were expended for farm labor and $662,000 for fertilizers.

In ten years the number of farms decreased 3 per cent.; the size of farms increased 5 per cent.; the improved acreage increased 7 per cent.; value of land increased 107 per cent.; value of buildings increased 81 per cent.; value of implements and machinery increased 78 per cent.; expenditures for labor increased 89 per cent.; increase in expenditures for fertilizers 78 per cent.

MANURE SPREADER

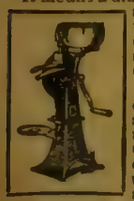
98% of the World's Creameries Use

DE LAVAL

Cream Separators

Ten years ago there were a dozen different makes of creamery or factory separators in use. To-day over 98 per cent. of the world's creameries use DE LAVAL separators exclusively.



It means a difference of several thousand dollars a year whether a DE LAVAL or some other make of separator is used in a creamery.

Exactly the same differences exist, on a smaller scale, in the use of farm separators. Owing to the fact, however, that most farm users do not keep as accurate records as the creameryman, they do not appreciate just what the difference between a good and a poor separator means to them in dollars and cents. Nine times out of ten the farmer can't tell whether or not he is wasting $50 to $100 a year in quantity and quality of product through the use of an inferior cream separator.

Now, if you were in need of legal advice, you would go to a lawyer. If you were sick you would consult a doctor. If you had the toothache you would call on a dentist. Why? Because these men are all specialists in their line, and you rely upon their judgment and skill. When it comes to buying a separator why not profit by the experience of the creameryman? His experience qualifies him to advise you correctly. He *knows* which separator will give you the best service and be the most economical for you to buy. That's why 98% of the world's creameries use the DE LAVAL exclusively.

There can be no better recommendation for the DE LAVAL than the fact that the men who make the separation of milk a *business* use the DE LAVAL to the practical exclusion of all other makes.

THE DE LAVAL SEPARATOR CO.

High-record Dairy Cows.

A careful study of the Advanced Register of Guernsey cattle brings out the following facts: There are 1,112 Advanced Registry records reported in the latest volume, and of this number of cows only fifty-five were reported not in calf at the close of their year's test, or a total of 4.9 per cent. There were twenty-three cows of all ages that had produced 400 pounds of butter-fat and were not in calf during their test, or a total of 2.06 per cent.

The percentage of cows, of different ages, which were in calf during the test, was as follows:

In the five-year-or-above class, 93.3 per cent.

In the four-and-a-half-to-five-year class, 95.5 per cent.

In the four-to-four-and-a-half-year class, 97.7 per cent.

In the three-and-a-half-to-four-year class, 95.6 per cent.

In the three-to-three-and-a-half-year class, 94.9 per cent.

In the two-and-a-half-to-three-year class, 96.5 per cent.

In the two-to-two-and-a-half-year class, 95.4 per cent.

Putting this test on a little more scientific basis, and requiring all cows, reported as being in calf, to be two months in calf during the test, we have a slightly different result, not as large a per cent. being two months or over in calf. Many cows with big records have not been bred until the close of their year's work, but it seems reasonable to expect a cow to be at least two months in calf, and it is an uncertain matter to report them safely in calf in less time. I have therefore selected this period on which to base my figures for this article.

The cows of all ages which were two months in calf during the test produced butter-fat in the following amounts per year:

90.5 per cent. produced 400 to 450 pounds.

92.2 per cent. produced 450 to 500 pounds.

90.8 per cent. produced 500 to 550 pounds.

85.4 per cent. produced 550 to 600 pounds.

79 per cent. produced 650 pounds and up.

Taking the above report to be correct, we have the following results: The association reports over 95 per cent. of the record cows in calf before the close of the test. Barring out those cows reported in calf, but not found to have been two months in calf, the records show that 90 per cent. is a good average. It would seem, then, that records of 400 and 500 pounds of butter-fat can be made, without impairing the cow's capacity as a breeder, with careful feeding and management; but when a cow is forced to 550 and 600 pounds of fat per year, there is great danger of making her a non-breeder. These figures have been worked out with Guernsey cattle, as the Guernsey Association is the only one giving the data required for the above information.—Geo. P. Grout, Dairy Division, University Farm, St. Paul, Minn.

Dairy and Creamery Notes.

Cheese exports from this country amounted to 9,685,169 pounds in the year 1908, and were reduced to 2,418,859 pounds in the year 1910. About three cents advance in price is what cut off the exports.

In the year 1908 the butter exports amounted to 8,239,696 pounds, and in the year 1909 to 2,503,533 pounds. The 1910 exports were 2,760,940 pounds. This indicates that the United States market for butter has been strong enough to keep the bulk of the butter production at home.

It seems that in Scotland there are two types of Ayrshire cows—one kept for beauty and the other for utility. One is the type with a marked dairy conformation of large udder and long teats, and the other, the vessel type, so-called, being the show-ring Ayrshires of Scotland, which are kept simply for showing in the ring.

G. W. Patterson, Iowa Dairy Expert, says: "It is just as difficult for a cow to produce milk without protein as it is for a man to think without brains."

Pontiac Clothilde de Kol, a Holstein cow owned by Stevens Bros., of Liverpool, N. Y., has just made a record of 34.32 pounds of butter-fat in seven days.

Herman Croshaw, a milk shipper of Wrightstown, N. J., claimed that it was no business of his to load milk cars for the satisfaction of the railroad company. The company had loaded the cars for a number of years and then decided to quit it. A decision by the Public Utilities Commission started the railroad crews doing the work again.

Eastern railroads have been stopped from putting advanced rates on condensed milk and cream into effect. The Interstate Commerce Commission has first to be shown that the new rates are reasonable. The Interstate Commerce Commission very seldom sees any reasonableness in an advanced rate.

Four cents a quart delivered at the platform is the price limit which the Philadephia Milk Exchange intends to pay for milk.

The Milk Reporter of January, 1911, said: "Butter—best creamery extras—quoted in the New York market at 25½ cents a pound and milk 4 cents a quart. Thus 6.4 quarts of milk have the same market value as one pound of butter."

Now it appears that oleomargarine is to have a competitor in vegetable margarine, and the worst of it all is that the vegetable product is worked in and mixed with real butter. This is an item from Europe.

Missouri Corn Contest.

In the Corn Contest held during Farmers' Week at the Missouri Agricultural College, Wade Boots, fifteen years old, of Palmyra, Marion county, won the Reibel trophy and a $75 cream separator for the best single ear of corn at the show. The highest prize of the show for the grand champion ten-ear samples of the state was won by J. G. Douglass, of Shelbina, Shelby county.

The first prizes given in the different sections are as follows: Northwest Section—White corn, H. W. Harris, Blue Springs; yellow corn, O. J. White, Fairfax. Northeast Section—White, S. F. Stephenson, Canton; yellow, J. G. Douglass, Shelbina. Central Section—White, E. L. Long, Fayette; yellow, C. Ohlendorff, Boonville. Southeast Section—White, E. J. Bayer, Chesterfield; yellow, H. C. Hensley, Jackson. Southwest Section—White, M. D. McRoskey, Battlefield; yellow, Archie Poncot, Reeds.

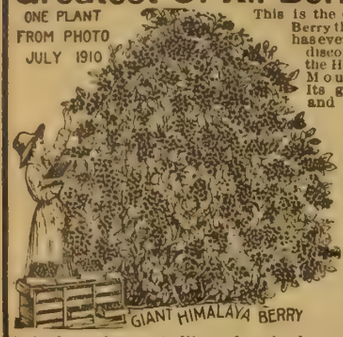
THE JOHNSTON HARVESTER CO. Box 117 B, BATAVIA, N. Y.

Greatest Of All Berries



This is the Greatest Berry the world has ever known, discovered in the Himalaya Mountains. Its growth and productiveness is simply marvelous. It is perfectly hardy everywhere and grows from 30 to 50 feet in a season and can be trained on arbors or trellises of any kind.

The Engraving shows one Plant from photo July 1, 1910, which is trained to a large trellis loaded with fruit, and continued bearing until October.

The Fruit is black, almost coreless and the large luscious Berries borne in enormous clusters will literally melt in your mouth. It is unsurpassed for eating fresh, cooked, canned or preserved in any form and is the Greatest of all Berries for all Climates.

Everybody can and will grow this Great Berry for it is the easiest Fruit in the world to grow, is splendid for city people or any one with limited space, for it can be trained up from the ground like a tree producing Berries from 8 to 4 months, growing larger and producing more Fruit each year.

We guarantee this the Greatest of all new Fruits and can produce facts no one can get away from.

Beware of imitations. Giant Himalaya is a family by itself and highly valued wherever grown. The English Himalaya or Plants raised from seeds cannot be relied upon for fruit or hardiness. Our plants are from tested parent stock. Complete satisfaction guaranteed

Instructions for cultivation with a booklet of receipts for using in many ways free with all orders.

Mr. Thomas H. Cross.

The picture presented herewith represents Mr. Thomas H. Cross, of Chicago, who has given up the position of head cattle buyer for the National Packing Company to become a partner and cattle salesman with the live stock commission firm of Clay, Robinson & Co. The National Packing Company is established at twelve different markets, with a capacity of buying 5,000 cattle a day, and the firm of Clay, Robinson & Co. is also established at ten of the principal live stock markets, selling several thousand cattle a day. Mr. Cross was head cattle buyer for the National Packing Company for seven years. He was a buyer and seller of live stock since his earliest years; was a successful wholesale butcher, and no man in the trade is better posted in all its branches, and is now in the prime of active life. The change from the buying side to the selling side by Mr. Cross is evidence of the opinion of the chiefs of the firm of Clay, Robinson & Co. that the interests of the shippers are equal in every way to the entire buying side of the market; that the best ability, the highest skill, the most extensive equipment are all necessary to do the shipper justice. This has always been the policy of Clay, Robinson & Co. at all markets. Strong enough to resist a decline when circumstances are against us, and able to lead an advance whenever there is an opening. Mr. Cross is now working side by side and hand in hand with Mr. Chas. O. Robinson in the cattle yards of the Chicago market. In this paper Clay, Robinson & Co. are represented on page 21.

St. Louis Grain Prices, January 31st.

Cash grain bought by sample and delivered in car-loads on track on the last day of January. Basis of trade: Corn No. 2, 44½ cents a bushel; No. 2 yellow, 45 cents; No. 2 white, 46 cents. Wheat—No. 2 red ordinary sold at 99½ cents; inferior offered as as low as 96½ cents; fancy car brought $1.05; No. 3 red sold at 95½ cents to $1.01½, latter choice; some offered at 95 cents; No. 4 red sold at 83 to 92 cents; No. 2 hard sold at 94 cents to $1.01. Oats—No. 2 white, 33 to 34 cents; standard, 32¾ to 33¼ cents; No. 3 white, 32½ to 33 cents; No. 4 white, 31¾ to 32¼ cents; No. 2 oats 32¼ cents, nominal; No. 3 oats, 32 cents, nominal; No. 4 oats, 31 cents per bushel.

The Corn Market Situation.

The United States has something to say about the corn market. It is an American crop, and this is the only exporting nation at present. Corn declined last fall and has since held steady to strong at the decline. The Board of Trade view is that corn has touched bottom. This bottom is about 16 cents a bushel lower than last year.

On January 31st the May option was uoted at the close at 49¾ cents, an advance of 1¼ cents a bushel over the previous month's close. The July option closed at the same time at 50⅞ cents a bushel, an advance of 1½ cents over the previous month's close. The future quotations of corn are higher than the cash price of the present.

Estab. 1874. A. J. CHILD & SONS MERC. CO., St. Louis, Mo.

The Wool Growers' Opportunity.

Heretofore the sheep raisers have had to contend for the principle of protection alone. General farmers were not interested. The sheep raisers, however, were good campaigners and have held the wool duties steady, notwithstanding many an effort to reduce them. Right now the wool growers will find the corn and wheat, the beef and pork growers interested. If Congress passes any more discriminatory legislation against the agricultural interest there will be a chance to revise the tariff a third time. Sheep raisers ought to send out an invitation to the wheat growers and beef growers to join them in the fight to stop discriminating legislation against all farm products.

GOOD BOOKS AND PAPERS.

INSIDE FACTS ABOUT INCUBATORS. Mr. J. S. Gilchrist, President and General Manager of the Des Moines Incubator Company, has published a book under the above title, which contains a vast amount of valuable information concerning poultry success through the use of incubators. It is a seasonable work, and each of our readers can get one free.

BURPEE'S SEED ANNUAL. Burpee's Fordhook Farms are famous as the most complete trial grounds in America. This firm has just issued the Thirty-fifth Seed Annual. Burpee & Co. offer premiums at every State Fair in the United States for the best collection of vegetables grown from Burpee's seeds. The catalogue has 174 pages, the pictures are true to life, and the seeds are the best by test. It includes farm seeds, vegetables, flowers and bulbs. Address, W. Atlee Burpee Co., Philadelphia, Pa., and ask for 1911 Annual.

THE FARM ENGINE BOOK is issued free by the Detroit Engine Works. It goes into the matter of kerosene as cheaper fuel, displacing gasoline because of the increased price of the latter. It describes the Amazing Detroit Engine as doing all kinds of farm jobs, how it is sent on trial, and the low cost of same. Write for it to Detroit Engine Works, 383 Bellevue avenue, Detroit, Mich., and mention this paper.

Prof. F. J. Hagerling, professional and successful horse trainer, has written a book to interest horsemen. It is pocket, ready-reference size and intensely interesting. This book is advertised on page 20.

FARM DEVELOPMENT—an introductory book in agriculture. This is splendidly illustrated; the pages are 5½x8 inches; there are 392 pages; it is elegantly bound in cloth and the price is $1.50. **FARM DEVELOPMENT** was written by Hon. Willet M. Hays, Assistant Secretary of Agriculture. It takes up farming as a vocation, including a discussion of soils, selecting and planning farms, subduing the fields, drainage, irrigation, roads, fences, together with introductory chapters concerning farm business and the relation of general science to agriculture. It takes up farming as a vocation, tells about the geological history of the earth, explains the way soil is made, describes the manner of selecting a farm home, how to subdue the land, how to drain and irrigate and how to build roads, bridges and fences. These are real life problems. Published by Orange Judd Co., 439 Lafayette street, New York, N. Y.

THE GARDEN AND FARM ALMANAC FOR 1911 is complete in every detail. It tells, among other things, how, when and where to plant and grow to the very best advantage all flowers, vegetables, crops, shrubs, trees and lawns, as well as how to fight all insect enemies, and includes many other features invaluable to people who have their homes in the country. It is crammed full of new and attractive ideas and suggestions, two brand-new features being "Who's Who in Poultry" and "Who's Who in Dogs." The price is 25 cents. Published by Doubleday, Page & Co., New York City, N. Y.

"SANBORN, OMAHA."

The word "Sanborn," of course, recalls Standard Stock Food. For more than a quarter of a century Mr. F. E. Sanborn, of Omaha, has been making Standard Stock Food and keeping Omaha conspicuous on the map. He has been the one man who has personally been superintending all the products of that big company. It is true that goods of superior quality have a way of making you acquainted with the man who makes them. The manufacturer of good goods puts his own character into the product. He simply cannot help it. It is a law of nature that governs such things. We may never meet the man face to face, but we know him just the same as we know his goods, and we make ourselves acquainted without any more ado. We present a portrait of Mr. Sanborn herewith. Mr. Sanborn is peculiar. His correspondence includes half the farmers in the Middle States and a good many from every other state in the Union. They write about buying goods and write about advice for live stock troubles. They want to know about feeding, about finishing for market, about fitting for live stock shows. It saves time and worry to write to Sanborn. And Sanborn is living pretty well up to his reputation as an authority on the care and keep of live stock in general. On this point, in a recent conversation, Mr. Sanborn said: "I don't think of the business value of whatever reputation I may have in advising my friends on the farms. It is the personal satisfaction I get out of it that counts most with me. I know, of course,

F. E. SANBORN,
President Standard Stock Food Co.

that if a farmer likes me for some reason or another, he is more likely to trade with me and to want my goods; but there is one thing I am more sure of still, and that is every time a farmer tells me my goods are good and that it is profitable to him to use them, I get an enjoyment out of the fruits of my business that money alone could never give me. There is another thing I am sure of, and that is that I never could have succeeded in building this business up to what it is if I didn't make my goods just as good as I say they are, and that is the best the money can produce." All this, of course, leads up to the big advertisement of the Standard Stock Food Company on this page. The splendid and liberal offer of free cabinet and list of free goods is continued for a little while longer. Do not fail to sender to all the advantages of that offer, send for the free coupon which entitles the Address, The Standard Stock Food Company, Dept. 3132, Omaha, Neb.

$12.00 FREE

F. E. SANBORN,
President Standard Stock Food Co.

I am putting a quarter of a century of business experience as a manufacturer of Stock Food and Veterinary Remedies behind this free offer.

My goods, when used as they should be, will give you big returns on your investment. This has been demonstrated again and again—hundreds of thousands of times. I am backing this with a positive guarantee on every article.

I want to get you started on the Standard line. I am acting just as you would act under the circumstances. If you had something which you **knew to be better** than any other thing of the kind ever made, and you wanted people to know about it *quick*, you would give them some of it so they *would* know, and so they would tell their friends. That is just what I am doing. I ask you to mail me the free coupon—do it today.
—F. E. SANBORN, *Pres. Standard Stock Food Co.*

THE LAND INTEREST.

Those who are looking for superior lands at low prices can do no better than study the Arkansas situation. W. R. Cavett, of Shreveport, La., is offering a plantation for sale in our land columns, noted for richness of soil and crop possibilities.

An advertisement on page 20, concerning dairy opportunities in the South, is very well supported by the facts. There are great opportunities in Piedmont section, of which Greenville, S. C., is the principal town. There is a superior climate, good markets, splendid railroad facilities and lands for sale comparatively cheap. Goldsmith & Agnew, Greenville, S. C. have a large list of farms that are worth looking over.

A Chicago syndicate, headed by W. J. Brewer, has purchased 2,400 acres of Texas lands for the purpose of starting commercial orchards. The lands are near Genoa, in Harris county.

The orchardists of Central Missouri are about to inaugurate a campaign against frost. Two thousand oil heaters were ordered as a result of a meeting recently held in Sedalia.

An extensive clearing-house for farm mortgages has been established at St. Louis. The capital stock is $1,000,000. George L. Williams, President; William H. O'Brien, Vice-President and Counsel; S. Lee Elliott, Vice-President; O. B. Strunk, Secretary; and W. L. Wright, Treasurer. These also constitute the Board of Directors.

Under the name of the Louisiana Company, Limited, Julius F. Funk, of Illinois, and associates have purchased, near Paridis, La., 15,000 acres of reclaimed alluvial lands for the sum of $315,000. Mr. Funk is President of the Farm Products Company, of Bloomington, the producers and sellers of seed corn, and the sale was made by O. W. Crawford, of the Louisiana Farm and Land Company, of New Orleans.

From Lake Charles, La., January 14th, it was reported that a deed was filed in Leesburg, the parish seat of Cameron Parish, from the North American Land and Timber Company, conveying to Thomas L. Means and Leslie Symmes, of San Francisco, 305,000 acres of overflow prairie, located btween the Calcasieu and Mermentau rivers, the north line being sixteen miles south of Lake Charles. The consideration, $305,000, was paid in cash.

Decrease in Beef Exports.

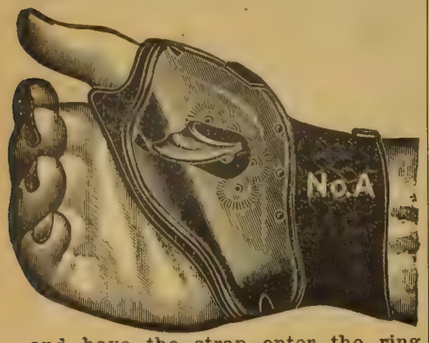
Live cattle exported from the United States in the year 1908 amounted to 254,251 head; in the year 1909 the exports were 171,646 head; and in the year 1910 the exports were 94,355 head.

In the year 1908 fresh beef to the amount of 155,905,047 pounds were exported; in the year 1909 the exports were 93,449,200 pounds; and in the year 1910 the amount exported was 55,285,194 pounds.

In the year 1908 canned beef to the amount of 17,374,187 pounds was exported. In 1909 the exports included 16,400,925 pounds of canned beef; and in the year 1910 the canned-beef exports were reduced to 11,420,535 pounds. In explanation of this decrease in exports is the decreased supply and the increased home consumption of meats.

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husk and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure



and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Co-operation Among Farmers Worldwide.

Throughout the world there is a growing movement towards co-operation among farmers. In spite of the fact that multitudes of co-operative efforts have failed, there are to-day in the world more co-operative societies than ever before, and they are more successful than ever before.

It used to be said that co-operative efforts among farmers were doomed to failure; but the thousands of successful societies of this kind prove that nothing in the world of commerce is more likely to succeed than the co-operative society.

It is a common saying that 95 per cent. of all men that go into general business fail. That saying may not be exactly true, but it is well known that failures in business are very numerous. It is not probable that that proportion of co-operative societies fail.

Co-operation is a thing that has to be studied. Everything has its drawbacks, and so has co-operation. Every new condition has a new set of problems connected with it. These problems were at first the obstacles in the way of co-operation. But today co-operation has an extensive literature, and any group of men looking forward to a co-operative enterprise can easily secure a mass of literature from the different governments of the world that will make possible a liberal education on co-operation.

In foreign countries co-operation has developed much more rapidly than it has in the United States. This was due probably to the fact that the struggle for existence had become more intense than in this country. It was the struggle for existence that forced the great co-operative movement among European farmers.

There is no country that probably needs co-operation more than Ireland. There are now in that country more than 800 co-operative societies. Of these more than 350 are co-operative creameries. There are 270 credit societies, for the purpose of furnishing money. There are over 170 societies of general farmers, buying and selling co-operatively. There are 25 societies devoted to the selling of poultry products.

Denmark has become famous by reason of her co-operative societies. They have rejuvenated the agriculture of Denmark. They comprise creamery associations, poultry-selling associations, bacon-producing associations, co-operative slaughter-house associations, and many other kinds. Denmark has become famous especially for her butter, her bacon and her eggs. More and more, co-operation is rendering the Danish farmers independent.

In Germany there are so many agricultural co-operative societies of various kinds that they have drifted into two great leagues of societies. One of these is the Imperial Union of Agricultural Societies. The other is the General Union of Agricultural Societies. The numerous societies that make up these two leagues are ramifying into every part of the German Empire. More and more they are making it impossible for a few men to pile up great fortunes out of the labor or the misfortunes of the farmers.

In France, Austria and Italy the co-operative movement has taken deep root and is flourishing. The separate societies number thousands.

In New Zealand and Australia, co-operative societies have been in existence for many years. All along the African coast like societies are coming into existence.

The co-operative society is the greatest obstacle possible in the way of the men who would gather most of the wealth of the world into their own possession.

Artichokes Valuable Feed.

Artichokes are one of the paying crops on the farm to feed hogs; on very rich soil they have been known to yield 1,000 bushels per acre. One man in Polk county, Oregon, planted five acres and fed out ninety hogs on them; another farmer in Washington feeds out $1,000 worth of hogs every year on them. Why is it that farmers don't plant more artichokes? Some may say we cannot get rid of them. Here is a recipe: Turn in the stock, especially the hogs; let them run on them all summer and that will kill them.

Cut and plant same as potatoes and tend first spring, and in November turn the stock in; cattle, horses, sheep and goats will eat the tops, and hogs will dig the artichokes; pasture when not too wet till May, then plow the artichoke ground, and harrow down good and let them go; there will be enough in ground to seed it good. They will take care of themselves without any cultivating for years. Be sure and plant where stock can be turned in each year.—L. L. Brooks, Corvallis, Oregon, in Northwest Horticulturist.

Look Out For Brazil.

It is reported that the Brazilian government has given over certain concessions to a New York company, which is to have the monopoly of cattle slaughter and beef export from Rio Janeiro. It is also stated that within six months or a year Brazilian beef will be landed and sold in New York City. It is in the interest of such a monopoly that the cry is being raised to take off the duty of 1½ cents per pound, which, under the present law, this meat will have to pay for the support of the United States government. The farmers and stockmen of this country have been advised to look out for Argentina, and while they are looking out for Argentina they may as well look out for Brazil.

FOUR BIG PAPERS 80 CENTS.

The National Farmer and Stock Grower; Twice-A-Week Republic of St. Louis, the best semi-weekly in the Southwest; Farm Progress, the biggest semi-monthly farm paper printed; and Woman's World, a monthly woman's paper, sent to any address, a year, for only 80 cents. Regular subscription price, $1.50—bargain price, 80 cents. Send orders to the **St. Louis Republic, St. Louis.**

It is now reported that the milk zone of the city of London includes Cherbourg, across the channel, in France. Milk is also shipped to London from Ireland.

Our rose premiums which are advertised on page 19 are the best ever offered by a farm paper.

Spreader Value Means What You Get—Not What You Pay

The Great Western is a *quality* spreader—made for the men who can see *past* the price to the years of service and the *kind* of service. It is built with the finest materials—the correct principle and right construction. Then the price is fixed on the basis of our matchless facilities and enormous output which insures the most for your money. 100,000 farmers and most U. S. Government and State Experiment Stations—use and endorse the

Great Western Endless Apron Spreader

Let us send you proof. Know what the wonderful Great Western Endless Apron means. Read how *much* more oak, hickory, steel, malleable and wrought iron is used in the construction of the Great Western Spreader than in any other. Read all the facts. Then you'll know why we guarantee every Great Western to give 50% more service with 50% less repairs—whether it's a wooden or steel-wheeled machine, anywhere from 35 bushels to 100 bushels capacity.

CENTURY MFG. CO.,
Dept. 216, East St. Louis, Ills.

We are just as proud of the REMINGTON .22 Repeaters as we are of the REMINGTON Big Game high-power rifles—for just as good reasons. There is no other make of the .22 class built to as high a standard.

The features that place the REMINGTON .22 in a class by itself are the real big REMINGTON features—Hammerless and Solid Breech. You clean the barrel from the breech.

There is perhaps a greater difference between the REMINGTON and other .22 Repeaters than is to be found between rifles of any other class.

A real rifle—the REMINGTON .22 Repeater. Shoots without adjustment. .22 short, .22 long or .22 long rifle cartridges.

Set of targets mailed free.

Evolution of the Hog.

"Intelligence used in his breeding and care has raised the hog from the plane of the veriest savage, unsought except when hunted like any other wild beast, to that of a benefactor. contributing a wide variety of meats, among them the most toothsome known to the epicure, and other products essential to the best tables, to commerce and to the trades. The hog's disposition has yielded to the influence of good breeding and changed from that of the outlaw, ready for conflict with man or beast, to the peaceable temperament belonging with propriety to the barnyard resident. His conformation has been molded by skillful methods from bony, angular uncouthness into a structure of massive width, depth and thickness, affording a marvelous yield of pork and lard. Incidentally, by domestication and generations of breeding him for early maturity and quick fattening, the length of his intestines has been increased, it is claimed by scientists, more than 130 per cent."—From Coburn's "Swine in America."

Trees, But No Apples.

(By S. Van Smith, Colorado Agricultural College.)

All of us have so often seen growing near the house or in the yard apple trees whose lives would be endangered were their records for fruit bearing investigated. Very often they are healthy, thrifty-looking trees in the best of condition, as far as wood growth is concerned.

In most of these cases there is no reason, other than the inertia of the owner, for this unfruitful condition.

The word "grafting" has an ominous and mysterious sound to some who might by a surprisingly small amount of time and work perform simple operations in top grafting, which would be the cause of such barren trees becoming fruitful and useful as well as ornamental.

Almost any man or boy with the slightest degree of ingenuity and dexterity can saw off a limb, split the stub and slip in a couple of scions, or twigs cut from some good apple tree. True, it may be a rough job, but you will be surprised at the feeling of pleasure you will experience when you see the little twigs begin to grow, and later to blossom and bear fruit.

The process of top grafting is not so difficult to understand and to perform as the average person thinks. First, go to some good apple tree, which you know is a good bearer and a good variety, and cut your scions. If for the novelty of the thing, or for the purpose of experimenting, you wish to try two or more different varieties, it is quite practicable to graft several varieties on one tree. Trees have been seen bearing seven or eight different kinds of apples at one time. You may have to get your scions from some neighbor (scions are simply twigs from last year's growth). The scions should be cut while the tree is dormant, or any time before growth starts in the spring, but preferably in the fall, as the buds begin to swell sometimes soon after the first of January. Take for your scions the tips of the limbs which have made a growth of from twelve to eighteen inches the previous summer. Do not take water sprouts or shoots coming from the trunk or large limbs, as buds from these sprouts are not usually so strong as are those from the normal growth. Cut the scions off back as far as the previous season's growth extends and bury them in moist sand or soil, either in the cellar or on the north side of some building.

About the time the buds on the trees begin to swell, or from about the first of March on, is the best time to do the grafting. The limbs to be grafted should be somewhere between an inch and three inches in diameter. They should be sawed squarely off and the stubs split with a chisel down about two inches straight through the middle. The chisel is then removed and a wedge about half an inch wide inserted in the middle of the stub for spreading the split. If the wedge is much wider than this, it may not leave room enough on each side to insert the scion. Next, take one of the scion twigs and cut it into several pieces, each having three or four buds. Cut the larger end of one of these pieces wedge shaped and insert it in the split in the end of the stub so that the third bud from the tip comes a little below the end of the stub. Put one scion on each side of the wedge and adjust them so that the inner bark on the outer side of the scion comes in contact with the inner bark of the stub or large limb. Then, pull out the wedge, and the wood will spring together and hold the scions. All freshly-cut surfaces and the crack in the limb should be covered with grafting wax to keep them from drying out.

A good grafting wax is made by melting together two pounds of resin, one pound of beeswax and a half pound of tallow. After they are melted the liquid should be poured in cold water and then pulled like taffy until it is of a buff color.

Feed A Little Merry War Lye With Your Slop

Have you ever felt the disastrous effects of an epidemic of worms or cholera among your hogs?

Have you seen your piled up profits in flesh and fat go glimmering in a few days from these causes?

If so, you surely realize that preserving hog health is a case where an ounce of prevention is worth a pound of cure.

Symptoms Easy To Detect

When a hog goes about with nose to the ground—a "lack-luster" stare in his eyes—melancholy air—no interest in life—not even ambition enough to give vent to a life sized grunt or squeal—"off his feed"—and getting thinner and thinner—

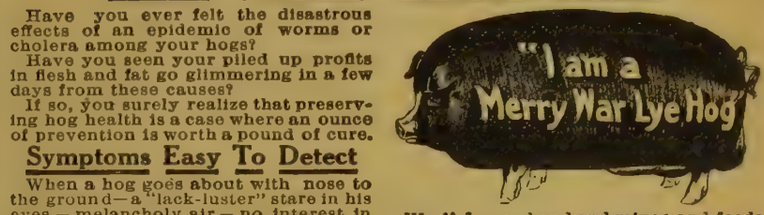
That means *w-o-r-m-s*, Mr. Hog Raiser, and you had better keep a sharp eye out for your profits, or before you know it Mr. Hog will slink off into a corner, stiffen out his legs, give a plaintive grunt and pass away.

Then, his shanks and sides won't mean best hams and bacon, but a soap kettle finish for him, and a hundred per cent loss in dollars and cents to you.

"Merry War" Lye Is An Unfailing Remedy

For just those conditions. It is unequalled for the extermination of worms and preventing the spread of cholera, and is by far the most economical.

No Hog Raiser need have the slightest fear of a worm or cholera epidemic, if he keeps a constant supply of *"Merry War" Lye* on hand and mixes and feeds with slop the year round. It will increase pork profits many times when used as directed.



Try This Sure Test

Tablespoonful *"Merry War Lye"* mixed with slop for ten hogs, or one-half can with barrel of swill for larger quantity. Stir well, feed night and morning.

In a few days see marked improvement in your hogs. It cleanses the system, tones the digestive organs, puts sick hogs in prime condition and renders them immune from contagious diseases.

This trial will convince you and the cost is so trifling that you won't notice it.

Ask Your Dealer for "Merry War" Lye

While most up-to-date dealers handle *"Merry War" Lye*, some dealers may offer you some other brand. If so, don't accept it, but explain to the dealer that while there are other brands of Lye that are good for certain uses, yet there is only one kind—*"Merry War" Lye*—that is safe and specially prepared for use in preventing and curing sick hogs.

So if your Dealer can't supply you, write us and we will give you the name of one who can; and will also send you a valuable book on *"How to get the biggest profits from hog raising."*

"Merry War" Lye comes in 10c cans, 24 for $2.00 at Grocer or Druggist.

E. Myers Lye Co., Dept. 22 St. Louis, Mo.

Hercules Stump Puller.

There is no better illustration of stump pulling than the one to be seen on page 7. Reliable people can have thirty-days' free trial. One of our patrons who bought one last year, said: "Whatever it gets tied to is sure to come." There is a special proposition to the first one who buys in new sections. Read the advertisement and write to Hercules Manufacturing Company, 140 Seventeenth street, Centerville, Iowa, and ask for circular about the All-steel Triple Power Stump Puller.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

At Fort Reno, Okla., and at Fort Keogh, Montana, it costs $46.80 per head per year to forage the horses at the remount stations. This probably does not include the cost of the force on duty at the remount stations.

Pratt-Elkhart "40"

UNUSUAL AUCTION.

Sale of 300 Young Mules and 350 Mares, Singly and in Pairs, at the National Stock Yards.

The Most Important Horse and Mule Auction Held in Many Years.

On Friday, February 17th, Campbell & Reid and Western Sale Stables Company, of the St. Louis National Stock Yards, will sell for Guy Crandall, of Townsend, Montana, three hundred mules and three hundred and fifty mares.

The firm selling these mules say as follows:

"The mules consist of fifty coming two-year-olds, 125 coming three-year-olds and 125 coming four and five-year-olds. They are an even dark-colored lot, sired by the very best Missouri and Kentucky jacks and out of grade draft mares weighing 1,350 to 1,750 pounds. All of these mules have been grain-fed and are kind and gentle. The coming two-year-olds are halter-broken, and nearly all of the others have been broken to work. The majority of these mules are mares. Only a portion of them have small brands. They mate closely and are a growthy, big-boned, high-qualitied lot of mules, equal to the very best Illinois or Missouri mules of like ages.

"We will also sell for Mr. Crandall 250 mares, two to six years old. Fifty of these are practically pure-bred Shires of splendid quality, extra weight, and bred to an imported Shire stallion weighing 2,200 pounds. The balance are high-grade Percheron and Shire mares with plenty of size, bone and finish, and bred to pure-bred draft stallions. These mares are kind and gentle, and nearly all are broken to work.

"Besides these we will sell 100 lighter mares, fifty yearling and fifty unbranded draft colts and coming yearlings. The mules will be sold in pairs and the mares singly and in pairs at auction to the highest bidder under a full guarantee of age, soundness and work qualities.

"We held sales of mules in Februaries of 1909 and 1910 for Mr. Crandall, who is well known in this market, and his mules have given splendid satisfaction, and this lot will be much superior to any he has heretofore shipped. The Montana draft-bred mares and mules are exceptionally hardy and have an excellent reputation, the mares proving fine workers and sure breeders, and the young mules give excellent service on the farm and develop and grow into money makers.

"This sale is held at a time when you can sell these mules and mares to farmers ready to go into every-day spring farm work, and you will secure them at prices much lower than you can purchase the same class in any of the Middle States. Hoping to see you here, we remain,

Yours Respectfully,
CAMPBELL & REID AND WESTERN SALE STABLES CO.,
National Stock Yards, Ill."

A Beneficial Institution.

The L. C. McLain Sanitarium of 916 Aubert avenue, St. Louis, is devoted to the correction of deformities. This is probably the best of its kind in the United States, and has performed wonderful cures. A letter to the Sanitarium, mentioning this paper, will bring a booklet on the subject that is worth reading.

Successful Horse Auction.

The largest run of horses that Holland, Nugent & Maxwell Bros. ever sold at auction consisted of 1,800 head, and the largest assembly of buyers ever crowded into the "Bull Ring" Pavilion were in evidence during the last two days of January at the St. Louis National Stock Yards. There was no break in the market. Just as fast as horses could be brought in they were sold, and the buyers were able to fill up car-loads of the classes they were in need of. On February 1st at the National Stock Yards there were 4,250 horses and mules for sale on commission and over 10,000 horses and mules in the barns of the horse and mule dealers in and adjacent to the market.

Mules For South Africa.

The Joseph A. Maxwell Mule Company, of the St. Louis National Stock Yards, are just finishing the delivery of three hundred 14½ and 15-hand mules destined for South Africa. These mules are shipped from St. Louis to New York, thence by boat, thirty-days' journey, to Cape Town, thence to Johannisburg and to the diamond mines. This shipment was collected and delivered by George A. Maxwell, who makes a specialty of such contracts. He has also completed a delivery of horses to Cuba quite recently.

On January 31st, a bull weighing 2,040 pounds sold on the market at the St. Louis National Stock Yards at 5½ cents a pound.

Horse and Mule Notes.

A recent purchase of 417 head of mules at $235 per head near Mexico, Mo., is announced as one-week's operations by a St. Louis firm.

On February 23d, at their sale barn in Oklahoma City, Messrs. Walker Bros. will hold public sale of twenty-five draft and coach stallions and mares. For horsemen who have determined to own good stock these auctions afford a splendid opportunity to buy the right stock at a fair sale. All the stock offered is recorded in the United States Stud Books of their special breeds, are fully acclimated and warranted. The ages run from weanlings to ten years old, mostly at the ages of three to six. Write the firm for list of stock to be offered.

From Hopkinsville, Ky., it is reported that five car-loads of mules were sold in one day at prices ranging from $175 to $245 a head. The top price was paid for a full load, being $10 per head higher than any previous car-load sale in that vicinity.

HORSE AND MULE SALESMEN.

We sold 40,000 last year. Ask for the Economy Chief Dairy Guide for 1911. Most interesting cream separator proposition ever printed.

Sears, Roebuck and Co.
Chicago, Illinois

Shire Mares and Stallions.

On February 16th a new importation of Shire mares and stallions is due to arrive at Trumans' Pioneer Stud Farm, Bushnell, Ill. The importation consists of three to five-year-old bay, black and grey stallions, also an extraordinarily fine lot of mares and fillies for their sale on Thursday, March 2d. Write for description.

Cost of Milk Production.

Professor Erf, of Ohio, says that if it costs $102 per year to keep a cow, and if the cow gives 3,000 pounds of milk per year, the cost is 7.3 cents per quart; if 4,000 pounds per year, 5.5 cents per quart; if 5,000 pounds per year, 4.4 cents per quart; if 6,000 pounds per year, 3.6 cents per quart; if 7,000 pounds of milk per year, 3.1 cents per quart. Here is a range of 3.1 to 7.3 cents per quart, depending entirely on the amount of the product, the cost of keeping the cow remaining the same.

$15.95 AND UPWARD
AMERICAN SEPARATOR
SENT ON TRIAL. FULLY GUARANTEED. A new, well made, easy running separator for $15.95. Skims hot or cold milk; heavy or light cream. Different from this picture which illustrates our large capacity machines. The bowl is a sanitary marvel, easily cleaned. Whether dairy is large or small, obtain our handsome free catalog. Address
AMERICAN SEPARATOR CO. Box 1102 BAINBRIDGE, N.Y.

Dairy Items.

Messrs. J. R. White & Son, near Aurora, Mo., say: "We consider silage one of the best feeds we ever used to keep up the milk flow in winter. Since we began feeding silage we have never had a cow off feed, and we are feeding a cow all she will eat."

Malcolm H. Gardner, Superintendent of the Holstein Advanced Register, says that Holstein-Friesian milk contains 12 per cent. of total solids, of which 3.45 per cent. is fat and 8.55 per cent. solids other than fat.

Holstein cows and heifers examined for the Advanced Register of the breed, 227 head of them, averaged 26 quarts of milk a day, which, being 3.46 per cent. fat, represents a butter average of 15.6 pounds per cow per week.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presence adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

Buildings on the Farm.

The construction of buildings on the farm is bettered and simplified by firms that manufacture houses and deliver them right on the ground ready to be put up. One of these firms has an advertisement in this paper on page 8. By writing for their catalogue and Home Builders' Plan Book and enclosing 10 cents for postage you will receive a valuable work on buildings that will give practical ideas and a clear statement of cost. There are fifty-six plans for houses and bungalows. You can buy the complete house, or the mill work, the mantels and the hardware, and, if you so desire, you can secure the plans and construct the house yourself. The book is a safeguard to the home builder and should be sent for at once. Address, Gordon-Van Tine Co., 2482 Case street, Davenport, Ia.

The Top at Denver.

At the Denver Live Stock Show the grand champion car-load of steers consisted of fifteen head, averaging 1,402 pounds, fed by Clayton & Murnan at Eaton, Colo. These steers were sold by Clay, Robinson & Co. to the Colorado Packing and Provision Company at $8.25 per 100 pounds, which was 40 cents per 100 pounds higher than any other cattle sold for.

AN IHC MANURE SPREADER MEANS NEW LAND ON THE OLD FARM

THOUSANDS of people during the past year paid fabulous prices for new land—gave up their savings and their homes and moved into unknown country just for the sake of securing more productive property.

Hundreds of farmers found a better plan. They stayed at home and invested a small part of what it would have cost them to move to the new country in an I H C Manure Spreader.

Now in leisure time during the winter they are returning to the soil the rich fertility that has been drained from it—making new land out of old—putting it into condition to yield bumper crops.

With an I H C Spreader the manure can be distributed in the proper amount required by the condition of the soil. A light coat, where land is good, a heavy coat where it is most needed.

I H C Manure Spreaders have many exclusive features which you ought to know about. Years of successful service has shown their superiority. In buying an I H C machine you are assured satisfaction for they are backed by a company that cannot afford to risk its reputation by offering you anything but the best.

I H C Spreaders are made in three styles

Corn King—Kemp 20th Century—Cloverleaf

in sizes ranging from 30 to 70 bushels capacity.

Corn King and Kemp 20th Century Spreaders are of the return apron type—Cloverleaf Spreaders have endless aprons. Lime hoods for spreading lime and drilling attachments for distributing manure in rows are furnished on special order.

Let the I H C local dealer tell you all about I H C Spreaders and how you, too, can turn your manure pile into money with one of these simple, efficient machines. Catalogues can be secured from him, or, by writing for them.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
Chicago (Incorporated) U S A

IHC Service Bureau
The Bureau is a center where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to every one interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If the questions are sent to the I H C Service Bureau, they will receive prompt attention.

Please mention National Farmer and Stock Grower.

A Frozen Dairy Food.

A frozen dairy product has just been brought out by the Dairy Section of the Agricultural College at Ames. Iowa. The name is Lacto, and is made of loppered whole or skim milk, with the addition of eggs, sugar, lemons and flavoring materials. It is claimed for this product that it is rendering palatable the sour milk which scientists claim will prolong life. Lacto is said to have a more pleasant flavor than sherberts and ices and contains considerable more nutriment.

Ohio Corn Sweepstakes.

Graves & Tracey, of Antwerp, Paulding county, Ohio, won the National Stockman and Farmer Trophy for the best ten ears of corn produced in the state. This was at the Ohio Corn Show held in advance of the National Corn Show. The American Agriculturist's Trophy for the best corn exhibit by a boy was won by Byron L. Stanley of Woodstock, Champaign county.

Missouri Mules For Illinois.

A. L. Patrick, of Carmi, Ill., purchased 100 head of one-year-old mules in Shelby, Monroe and Howard counties, Missouri. He bought twenty-seven head of yearling mare mules from Mr. Estill, of Howard county, that were the best bunch of yearling mules in the state. They weigh from 950 to 1,200 pounds, and are from 15 ½ to 15 ¾ hands high.

ALFALFA CLOVER SEED

Fresh Eggs.

In a local paper we note the following, printed with the display which indicates that the advertiser believes he has a choice product and is bound to convince the public of this fact. The substance of his talk is this:

"Beginning this week, particular buyers will be able to procure 'Purple Seal' eggs. These eggs are the first ever offered in——, absolutely guaranteed in every particular. Each dozen carton contains a card showing the date laid. Every egg is absolutely sterile. Every dozen to eat. Never an egg tasting strong or musty from pickling. Never an egg with lost nutriment due to cold storage. But a delicious fresh food produced from healthy hens fed on pure food."

What is there about this recommendation which any farmer's wife might not readily put herself in a position to guarantee? Nothing at all. Much of it she really does in substance, but she takes her product where it is dumped in with the common lot, and credit for extra goods is neither claimed nor given.

The time is coming when all food will be put up in better form; when the individual will take the same pride in having her packages neat and in first-class order that the most fastidious manufacturer now exercises. She will find that it pays. She will enjoy having the particular customers inquire for her products. The compliment will be sought after and deserved.

For years we have known extra good country products to be retailed to customers once or twice a week, the parties thus disposing of them receiving a few cents more for their pains. But this means unnecessary trouble, and in some instances it cannot be given. The time spent in driving to different parts of a city to deliver the goods takes quite a percentage from the profit. Where butter and eggs are contracted for the season there is more or less risk in making a stated estimate. At some times of the year less butter is produced, and the hens are liable to go on a strike without warning. If a fixed quantity is promised for each week in the season, either there must be a surplus during the flush months or shortage during others. True, one may fill in the gap, perhaps, by buying of a neighbor; but can this product be guaranteed?

If the package is put upon the market in some such way as the one outlined, it does away with the necessity of making yourself a huckster. True, the middleman gets a profit; yet there are times when it is cheaper to give it to him—if not excessive—than to take a team from the hayfield half a day each week on the marketing trip.

If your name is placed upon each package you soon acquire a reputation. It is yours to determine whether this be good or bad. It may be a little more trouble to record the date at which each egg was laid, yet it is quite essential that the consumer know this, and after the habit of systematically recording it is acquired, the trouble is less than one would think.

It is only fair that some weight record be established. If you furnish large eggs you want them to be considered a little better than those of the smaller breeds which produce more eggs.

As to the pure food, your own advantage is on the side of it. The better you feed your flock the more will they reward you. Good food and in variety is a necessity to produce the highest egg yield. See that the refuse meat is fresh; that the vegetables are not half rotten; and that the grain is not musty. Because a chicken is less fastidious than a horse is no reason why damaged food should be fed to it.—Bessie L. Putnam.

Fakes and Insanity.

Anything over one hundred dollars for a hen or a cockerel is a sign of insanity. Anything over five hundred dollars is a fake. Don't let anyone startle you with the ten thousand dollar bird that has only one rival in her own family. Don't pay $25 for an egg. Buy them at 25 cents each. Many a good, honest "biddy hen" is worth more for meat and egg production than any of the so-called ten thousand dollar beauties. Eggs from the best strains of any breed are well sold at $3.00 a dozen, and twenty-five dollars ought to get a good picking from any breed. Keep out of the insane asylum if you can. The poultry business down to bed rock is based upon eggs at 25 cents a dozen and meat at 12 to 18 cents a pound. The poultry business, conducted as a business, will make more money upon the amount of money invested and the amount of attention given to it than any other business on earth, and the more you stick to it the better you will like it.

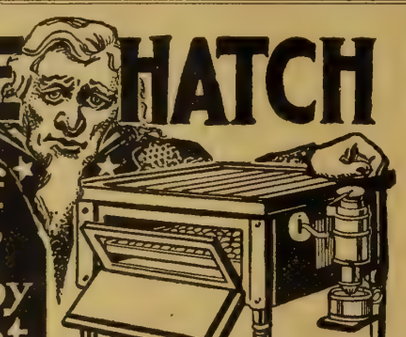
The Three Laying Years.

A writer in the Petaluma Poultry Journal, engaged in the subject of White Leghorns, says: "In the pullet year the pullet lays more eggs, because she has more time in which to lay them. If she commences laying in September or October she will have twelve months of laying before she molts, so she can produce 180 eggs. When she molts she is unproductive for an average time of three months, so the next year she has only nine months in which to lay. If she does as well as she did when a pullet, she may lay 135 eggs. As hens grow older they take more time to molt and the rests between the periods of laying are longer, so she will probably be unproductive four months the third laying year, and will do well if she produces 100 eggs. Beyond this it is very uncertain what she will do."

Australian Results.

At the Hawkesbury Agricultural College of Australia, in three different egg-laying contests, the averages for the first year were 180, 179 and 190 eggs per hen per year. The averages for the same hens the second year were 124, 127 and 140.

THE SURE HATCH



The Kind of Incubator Approved by Government Experts

Farmer's Bulletin No. 236 on Incubation and Incubators, issued by the **U. S. Dept. of Agriculture** describes a perfect incubator. In so doing it describes the **SURE HATCH** as faithfully as though the writer had a **SURE HATCH INCUBATOR** standing before him as he wrote. Read what he says:

"The body should be mounted on strong legs."
"The top should be smooth and unincumbered."
"No machine is complete without nursery and chick tray."
"Best regulator is double disc."
"Body should be of unshrinkable material."
"Walls must be air tight and have dead air space between."
"Must have double doors perfectly fitted."

The SURE HATCH is the only incubator having every feature required in a perfect incubator.

Double redwood walls with dead air space between; dependable hot water heating system, sensitive, positive heat regulator and safe, steady lamp, are **Sure Hatch** features that are not equalled in any other incubator. The

SURE HATCH cannot fail to hatch all fertile eggs. Insure against disappointment by getting a **SURE HATCH**, the incubator that has earned its reputation of hatching more healthy chicks than any other incubator made. **TRY A SURE HATCH 60 DAYS FREE.** We guarantee satisfaction and pay the freight. Send today for our Free Sure Hatch Book containing valuable information.

Sure Hatch Incubator Co.,
Box 40, Fremont, Neb.

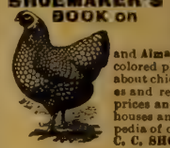
DES MOINES INCUBATOR CO., 161 Second St., Des Moines, Ia.

SHOEMAKER'S BOOK on POULTRY



and Almanac for 1911 has 224 pages with many colored plates of fowls true to life. It tells all about chickens, their prices, their care, diseases and remedies. All about Incubators, their prices and their operation. All about poultry houses and how to build them. It's an encyclopedia of chickendom. You need it. **Only 15c.**

C. C. SHOEMAKER, Box 945, Freeport, Ill.

Made on the Only Correct Principle

Lamp is underneath, in the center. That gives it the most even temperature throughout the egg-chamber. Holds 4 to 8 quarts of oil. Automatic trip cuts down flame at burner when too hot. Others let heat escape. That's why the X-Ray Incubator needs only

One Gallon of Oil and One Filling of the Lamp

to a hatch, while others need 3 to 5 gallons of oil and must be filled almost every day. Sold on 90 days' trial, guaranteed to be as represented and we pay the freight.

THE X-RAY **Incubator**

means better hatches at less expense and no bother. Made of California Redwood, enameled steel covered, rosewood finish. Ask for free book No. 60.

Tells how to limit your feed expense and still get more and better eggs and chicks. Eggs hatch better chickens, more chicks live, sell for more money. 80 pages, all interesting. Send for it today. It is Free.

Henry Steinmesch, Pres., 224 Steinmesch Bldg. St. Louis

I. N. Kramer & Son, Section B 3, Cedar Rapids, Iowa, well known seedsmen, have an attractive offer in our columns to all lovers of flowers, which should be read and acted upon by everyone interested.

Grain Seeding Revolutionized

The practical farmer of today no longer sows his seed broadcast. Why? Because he can do it cheaper and better with a grain drill. Neither is he satisfied with the drill his father used, because grain seeding, like everything else, has experienced an era of progress. The disk grain drill has practically revolutionized the method of sowing small grains. Thousands upon thousands of acres, where it would be absolutely impossible to put in grain by the employment of old style grain drills, have been transformed into golden-hued grain fields by the invention of the disk drill. Not only is this true, but the disk drill has lessened the labor for both man and beast. It has also enabled the farmer to reseed his worn-out meadows and run-down pastures. The farmer nowadays who has a Kentucky Disk Drill does not worry if his fields are trashy and the ground covered with pea vines, crab grass and trash. He no longer worries if his fields are muddy, or his ground is hard and difficult to sow. He knows full well that his Kentucky Drill will go through it all, put the seed in the ground and cover it well. The Kentucky Drill is made in a wide range of styles and sizes—plain and fertilizer—by The American Seeding-Machine Co., Incorporated, Richmond, Ind., whose ironclad warranty protects every purchaser. You can get in the Kentucky line a drill that will do your work right, no matter what state or territory you live in. Send to the manufacturers for the Kentucky Drill catalogue, read about Kentucky Drills and then call on your retail implement dealer and insist on seeing the Kentucky Drill.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid**, one that received the gold medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride**, one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler**, the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy, ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Disposition of the Cotton Crop.

Representing the supply of cotton in the United States for the year ending August 31 last as being 12,188,-021 bales, 20 per cent. less than that of the previous year, in its annual review of the cotton supply the Census Bureau says 52 per cent. was exported.

The quantity of cotton consumed during the year was 4,798,953 bales, compared with 5,240,719 in 1909, a decrease of 441,766, or 8 per cent. The average weekly consumption of cotton in the United States in 1910 amounted to about 92,000 bales, compared with 108,000 in 1909, 87,000 in 1908, and 96,000 in 1907.

A significant feature of the report is the growth shown in the manufacturing industry in the cotton-growing states since 1880.

There were in these states thirty years ago only 561,360 active spindles, which consumed 188,784 bales of cotton. In 1910 there were 10,801,494 active spindles, consuming 2,292,333 bales of cotton.

The quantity of domestic raw cotton exported during the year ending August 31, 1910, amounted to 6,339,028 running bales, valued at $460,868,020. The United Kingdom, France and Germany took five-sixths of the export cotton.

According to the report, the total value of exported cotton goods of domestic manufacture for the year ending June 30, 1910, amounted to $33,398,672, whereas the import of manufactures into the United States during the same year amounted to $66,473,143 in value.

Home Mixing and how to do it

Farmers

are learning that they can satisfactorily mix their own fertilizers, and because it is so *simple* and so *profitable*, more and more are doing so.

There are but two things to know to make it a success, and these you have to know anyway to make fertilizing pay: Just what your land and crop should have in the way of fertilizer and where to get the materials.

POTASH

A few simple tools are all that are required for mixing. A sand screen will help if you have one. Mix it on the barn floor, on an outside platform or on a spot of hard ground swept clean. *Home Mixing Pays Because Potash Pays.*

Mix It Yourself and Get Just the Fertilizer You Need

You can vary the mixture to suit specific needs of different crops or sections of land. To get best results you'd have to select several different fertilizers if you bought the complete commercial mixtures. You can add filler if more bulk or better mechanical condition is needed, and you don't pay freight on it, or handle that extra weight unnecessarily.

For full and valuable information on fertilizers, their mixing, use and value, see your State or U. S. Government Agricultural Bulletins, read good farm papers, discuss the subject with neighbors, and *today* write us for literature on Fertilizers with especial attention paid to Home Mixing, FREE.

The U. S. Department of Agriculture, in discussing commercial fertilizers in the South Atlantic States (*Farmers Bulletin No. 398, Free*), says: "In the study of fertilizer practice it was found that nearly all of the best farmers mix their fertilizers at home and adjust the different fertilizer constituents to suit the needs of the crop and soil."

We sell Potash—Muriate, Sulphate, Kainit—through dealers everywhere or direct to farmers anywhere in any amount from a two-hundred-pound bag up.

Your dealer can get it for you or you can write us. Write for our booklets and prices. Potash pays and we can supply you.

To introduce will sell at **25c., Postpaid.**
Prof. F. J. HAGERLING, Belleville, Ill.

OBITUARY NOTES.

Peter Kells Dederick, of Albany, N. Y., died at Daytona, Fla., January 19th, in his 73d year. He was inventor of the hay baling press which bears his name. As an inventor and manufacturer of agricultural implements he was famous throughout the world.

It was reported from Xenia, Ill., on January 18th, that Edward Holman, a Clay county pioneer, had passed away in his 83d year.

L. S. Cox, of Hoopestown, Ill., died by the accidental discharge of his shotgun an January 18th. He was a wealthy retired farmer, 55 years old. He had been at his farm during the day and, returning to his home, was alighting from his buggy, when the gun was discharged as he lifted it from the seat. The charge went through the heart.

Conrad Woerstmeyer, 61 years old, a well-to-do farmer of Kobestown, Mo., who has been visiting friends in St. Louis, was found dead in bed on the morning of January 15th. The door was locked and a strong odor of gas came from the room. When the doctor examined him he said that Woerstmeyer had been dead some hours.

On January 14th, at St. Louis, Thomas Kroeker died at the age of 73 years. Mr. Kroeker was born in Mayence, Darmstadt, Germany, and came to St. Louis in 1856. He filled large contracts for meat and supplies for the United States government in the Civil War, the materials being shipped direct to to the federal soldiers in the South. He had a stall at the Union Market within a month of the date of his death.

Albert B. Gregory, of Whitehall, Ill., 74 years old, died at his town residence on Lindell Boulevard, St. Louis, on Sunday, January 15th. Mr. Gregory was prominent as a stock farmer, feeder and breeder, and was a leader in all movements for the betterment of those who are engaged in agricultural pursuits.

Frederick Wellhouse, known as the "Apple King," at one time said to be the largest apple grower in the world, died in Leavenworth, Kas., January 10th, aged 82 years. In 1890 the yield from the Wellhouse orchards was 80,000 bushels, and it required 200 cars to ship his fruit. Mr. Wellhouse was a native of Wayne county, Ohio, and went to Kansas in 1859.

BLOODED STOCK ITEMS.

In the breeders' advertising columns of this paper will be found a card by Mr. Tom Shelley of Bridgeton, Mo., who wishes to purchase a number of brood sows that are safe in pig. Mr. Shelley is manager of "Woodlands," the famous thoroughbred stock farm owned by Mr. B. Schreiber.

The famous Limestone Valley jack farm of L. M. Monsees & Sons at Smithton, Mo., have a card in The National Farmer and Stock Grower once more. This is the home of record-breaking stock sales and grand champion jacks and jennets. The card is on this page.

When a breeder has so much faith in the quality of his Angus cattle that he offers to ship them on a "make-good-or-money-back proposition," there must be some merit in his stock. This is just what Mr. Vissering proposes to do. He offers cows, bred and open heifers, and bulls fit for service and younger, at popular prices. Terms, cash, or note any time in one year at 6 per cent. J. P. Vissering, Box 1, Godfrey, Ill.

Mr. W. Warren Morton, of Russellville Ky., is again advertising Tamworth swine in this paper. He is the winner of the grand championships at the St. Louis World's Fair and at many shows, including the grand champion at the great Yukon Alaska Exposition. His herd is headed by the undefeated P. F. Dean, 3,999, the largest Tamworth boar in America.

Mr. Chas. Ford, of Mortonsville, Ky., who has sold many Tamworth swine to readers of this paper, reports that he has quite a number of spring pigs from first-prize winning sows and champion boars which will give satisfaction to any buyer.

FARM AND RANCH LANDS.

ARKANSAS.—The new corn country and best alfalfa lands in Little River county; 1,000 acres Red River land; finest stock and grain farm in this section at a bargain. Hogs and cattle raised here cheaper than elsewhere. Address, **W. R. Cavett,** Shreveport, La.

MISSOURI.—4,120 acres of rich, cut-over well-drained bottom land, within one mile of railroad station. Located in the rich, productive region of Stoddard county. Will be sold in farm tracts at $25 to $30 per acre. Many consider this better than the rich lands of Illinois selling at $200 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—385 acres of rich, well-drained bottom land, excellent for corn, wheat, timothy, clover, alfalfa, fruits and vegetables. Price, $70 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

SOUTHERN DAIRY FARMS.

There is an enormous demand for dairy and stock farm products in the South. The government in its Agricultural Year Book says: "While the Southern dairyman will have some difficulties that are not found in the Northern sections, he also has many advantages over the Northern dairyman in milder climate, cheaper buildings and lands, greater variety of forage crops and good market." We have a large list of farms for sale in the rich Piedmont section at $10.00 to $75.00 per acre. Foot of mountains; no malaria; outdoor work the year round. Death rate in Greenville is 1 to the 100. Write for descriptive booklet.
GOLDSMITH & AGNEW, Greenville, S. C.

Greatest Farm Profits

are made by farmers in the **Southeastern States** on the cheapest, best located lands in America, in regions most healthful, climate most agreeable. This is shown by actual returns. Farmers have reported wheat yields of 40 bushels per acre, corn 100 to 150, six tons alfalfa, 200 to 300 bushels potatoes, profits of $100 to $400 on truck, up to $300 on fruit, make beef and pork at 3 to 4 cents a pound.

The Southern Field, illustrated newspaper, giving facts, State Booklets, Land Lists, etc., sent free on application. **Low Rates over Southern Railway.** Write

M. V. RICHARDS
Land and Industrial Agent, Southern Railway
1344 PENNSYLVANIA AVENUE, WASHINGTON, D. C.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural, balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

VIRGINIA.—Farms for sale from the mountains to the sea. Stock, Grain, Fruit, Poultry, Fish and Oysters. New Illustrated Catalogue free. Address at once **Geo. E. Crawford & Co.,** Richmond, Va.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

We can sell your property; send description. **Northwestern Business Agency, Minneapolis.**

WE GUARANTEE TO SELL YOUR FARM FOR CASH, no matter where located, within thirty days. Commission basis—no retaining fee—we get the money. Address,
PIONEER LAND CO., 6 Central Block, Decatur, Illinois.

FARMS WANTED! Don't pay commissions. We find you direct buyers. Write describing property, naming lowest price. We help buyers locate desirable properties FREE. **AMERICAN INVESTMENT ASSOCIATION, 55 Palace, Minneapolis, Minn.**

44 Bushels to the Acre

is a heavy yield, but that's what John Kennedy of Edmonton, Alberta, Western Canada, got from 40 acres of Spring Wheat in 1910. Reports from other districts in that province showed other excellent results—such as 4,000 bushels of wheat from 120 acres, or 33⅓ bushels per acre. 25-30 and 40 bushel yields were numerous. As high as 122 bushels of oats to the acre were threshed from Alberta fields.

THE SILVER CUP

at the recent Spokane Fair was awarded to the Alberta Government for its exhibit of grains, grasses and vegetables. Reports of excellent yields for 1910 come also from Saskatchewan and Manitoba in Western Canada.

Free Homesteads of 160 acres, and adjoining pre-emptions of 160 acres (at $3 per acre), are to be had in the choicest districts.

Schools convenient, climate excellent, soil of the very best, railways close at hand, building lumber cheap, fuel easy to get and reasonable in price, water easily procured. mixed farming a success.

Write as to best place for settlement, settlers' low railway rates, pamphlet "Last Best West" and other information, to Supt. of Immig., Ottawa, Can., or to Can. Gov't Agt. (54)

Canadian Government Agent, 125 West 9th St., Kansas City, Mo.
C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

Concerning Seed Corn.

Seed corn to be valuable must be pure-bred from recognized breeds grown under correct conditions and gathered before frost. Many farmers believe they have good seed corn, when, in fact, they have none at all. The growing of seed corn is as much a business of breeding as the occupation of breeding cattle. No man can deceive himself into the belief that his cattle are pure-bred when they are not; but farmers readily believe they have pure-bred seed corn when they have simply half-bred, three-quarter-bred, a sort of family corn, and not an ear that can be guaranteed to reproduce itself.

Last seeding season seed corn was very scarce. Farmers did not dare to rely on themselves because there were whole sections of country that could not put up a car of corn that would grade No. 2 in market. This year it is different; but for all that, much of the corn is better suited to the feed lot than to be selected for seeding purposes.

The Merchants' Exchanges and Boards of Trade have recently become alive to the fact that corn coming to market would grade better if it were better bred, and they are advising farmers to obtain their seed corn from recognized seed growers who are members of associations strictly growing pure-bred corn, and not to rely on the unknown product that simply looks good.

We have advertisers selling seed corn strictly up to all modern standards in purity of breeding, vitality by test, gathered at the right time, and fully up to all seed corn standards.

Every farmer should be sure that his seed is strictly correct, that he may establish seed corn plots of his own that in an emergency will place him in the ranks of corn breeders.

The Farmer's Best Friend.

Worth more than three hired men is a gasoline engine, especially if it is the right one. This item is in the interest of the Waterloo Gasoline Engine Company advertised on page 8. There's something about this little motor that particularly appeals to the judge of good machinery. It seems to combine something of the tremendous, irresistible power of the locomotive with the flexibility and smooth, sweet-running qualities of the automobile engine. It is so simple in design and has so few parts that it's almost impossible for it to get out of order, and even a boy can safely assume the care of it. It is of frost-proof, open-jacket construction and requires only a few pails of water to keep it cool. It will start practically as easily in winter as midsummer. Write for thirty-day trial and five-year guarantee offer. Address, Waterloo Gasoline Engine Co., 228 Third avenue, Waterloo, Iowa.

The Bradley Implements.

David Bradley was a noted agricultural implement manufacturer. The entire plant he established is now owned and operated by Sears, Roebuck & Co., and every implement made heretofore is yet made and sold direct from the factory. Mention this paper and write Sears, Roebuck & Co. for the book of David Bradley farm implements. See page 6.

Money Made in Wheat.

Secretary Wilson, of the Department of Agriculture, says that he overheard a man in a restaurant say to another: "You told me that Andrews was a farmer, didn't you?"

"I told you nothing of the kind," was the reply. "I told you that Andrews made his fortune out of wheat. You never heard of a farmer getting rich out of wheat."

A Reasonable Plea For the Stomach

If Your Stomach is Lacking in Digestive Power, Why Not Help the Stomach Do Its Work—Especially When It Costs Nothing To Try?

Not with drugs, but with a reinforcement of digestive agents, such as are naturally at work in the stomach? Scientific analysis shows that digestion requires pepsin, nitrogenous ferments, and the secretion of hydrochloric acid. When your food fails to digest, it is proof positive that some of these agents are lacking in your digestive apparatus.

Stuart's Dyspepsia Tablets contain nothing but these natural elements necessary to digestion and when placed at work in the weak stomach and small intestines, supply what these organs need. They stimulate the gastric glands and gradually bring the digestive organs back to their normal condition.

Stuart's Dyspepsia Tablets have been subjected to critical chemical tests at home and abroad and are found to contain nothing but natural digestives.

Chemical Laboratory. Telegraphic address, "Diffindo," London. Telephone No. 11029 Central. 20 Cullum St., Fenchurch St., E. C.

London, 9th Aug., 1905.

I have analyzed most carefully a box of Stuart's Dyspepsia Tablets (which I bought myself at a city chemist's shop for the purpose) manufactured by the F. A. Stuart Co., 86 Clerkenwell Road, London, E. C., and have to report that I cannot find any trace of vegetable or mineral poisons. Knowing the ingredients of the tablets, I am of opinion that they are admirably adaptable for the purpose for which they are intended.

(Signed)

John R. Brooke, F. I. C., F. C. S.

There is no secret in the preparation of Stuart's Dyspepsia Tablets. Their composition is commonly known among physicians, as is shown by the recommendations of 40,000 licensed physicians in the United States and Canada. They are the most popular of all remedies for indigestion, dyspepsia, water brash, insomnia, loss of appetite, melancholia, constipation, dysentery and kindred diseases originating from improper dissolution and assimilation of foods, because they are thoroughly reliable and harmless to man or child.

Stuart's Dyspepsia Tablets are at once a safe and a powerful remedy, one grain of these tablets being strong enough (by test) to digest 3,000 grains of steak, eggs and other foods. Stuart's Dyspepsia Tablets will digest your food for you when your stomach can't.

Ask your druggist for a fifty cent package or send to us direct for a free trial sample package and you will be surprised at the result. F. A. Stuart Co., 253 Stuart Bldg., Marshall, Mich.

The Sheep of the Holy Land.

The most common sight out of doors in the Holy Land is the sheep. They are everywhere. You find them on the rich plains where the Philistines lived; they feed among the rocks on the slopes of the Judean Mountains and spot the wilderness all the way down to Jericho. They graze on every part of Samaria and Galilee and almost everywhere on the plain of Esdraelon. They are always watched over by shepherds and are often driven to new feeding grounds. The greater part of this country is mountainous. Limestone rocks cover the soil, which is so thin that if you could pare it off for a depth of eight inches there would be nothing but stone. It is different in the plains and the valleys, but the hills are terraces of rock covered with boulders and sprinkled here and there with patches of earth. The conditions, however, are such that the least bit of soil will grow luxuriant grass, and the sheep seem to grow fat on the stones.

I remember some flocks I saw on my way to the Jordan. They were heavy-wooled animals, with tails of fat hanging down like aprons behind them. The most of them weighed 200 pounds, and the average was fatter and finer than the best sheep of America. Some were white-wooled and some brown, and others had brown heads and white bodies. I have tasted the mutton. It is excellent, and is the best meat to be had at the hotels.

Among the Shepherds.

The shepherds are about the same all over Palestine. They are kindly-eyed men with fair faces, bronzed by the sun. They stay out all day on the hills with the sheep, driving them into the villages at night. Each shepherd has his staff and his scrip, a little bag of dried skin. He uses a sling as David did, and stones his sheep to keep them from straying. The strings of the slings are of goat hair, and the pad for the stone is of the same material, so that when a stone is put in the sling it fits close like a bag. Such things are now used in stone fights between the boys of the villages, who practice to see who can throw the farthest.

The wool of these sheep is especially fine. It brings a higher price than that of Damascus, and something like a million dollars' worth of it is exported a year. The shearing is done by hand, and much of the wool is sold unwashed. Some is washed after shearing, the work being done by women, who receive less than a shilling a day.

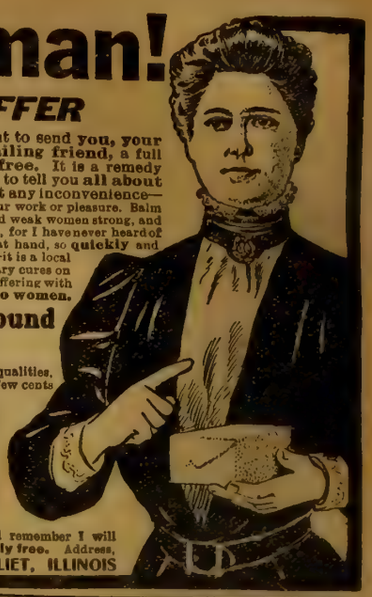
Nearly every flock of sheep has its goats. They are usually black and can be picked out at a great distance. Some of the goats produce excellent milk, and the best as much as three quarts a day.

There is a great deal in the Bible about the sheepfolds. These are common in Palestine. In the villages there are often corrals and sometimes caves in the hills. The village folds are closed at night and the shepherds keep the keys. Those of the mountains are usually open and the sheep go in and out as they will.

One of the most important duties of the shepherd is to water the flock. He does this at streams or wells. At the wells the women draw the water for the sheep as they did in the days of the Scriptures. They use bags of goatskin, untanned. The skins are taken almost whole from the goats, and the legs and other openings tied up so that the skin is waterproof. There is but one hole at the throat, and it is in this that the water is poured. The water for the household is carried in such bags, a network of ropes being wrapped around them so that it can be rested upon the back, the bag being supported by a rope around the forehead. A bag of the ordinary size, when filled, weighs at least 50 pounds. The women go along with their heads bent half double, carrying such bags to their village homes. They do this day after day all their lives long.—Frank G. Carpenter.

Sister Woman!

READ MY FREE OFFER



My Mission is to make sick women well, and I want to send **you, your daughter, your sister, your mother, or any ailing friend,** a full 50-cent box of Balm of Figs Compound **absolutely free.** It is a remedy for the treatment of **woman's ailments,** and I want to tell you **all about it**—just how to use it yourself—right **at home** without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—**let me prove it to you,** and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so **quickly** and **surely** cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with **any form of female weakness or diseases so common to women.**

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you **absolutely free,** to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to **prove** my faith by sending out these **50-cent boxes** free. So, dear reader, irrespective of your past experience, write to me **at once — today** — and I will send you the treatment **entirely free** by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the **very best test** of anything is a **personal trial** of it, and I know a 50-cent box of Balm of Figs Comcound will **convince you** of its merits. Nothing is **so convincing** as the **actual test** of the article itself. Will **you** give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a **50-cent box of this remedy absolutely free.** Address,

MRS. HARRIET M. RICHARDS, Box C 223, JOLIET, ILLINOIS

In the Dining Room.

Of late years fine china and glassware have so far replaced the silver formerly used in the dining room that its cleaning and polishing is not the task it used to be; yet some silver is used by nearly all housekeepers, but the articles will not add to the appearance of the table unless they are kept shiningly clean.

The silver in every-day use can be kept shining by washing in warm suds and then polishing with a piece of chamois, and when the silver has become dull-looking it can be brightened by rubbing with whiting mixed with a little ammonia and water. Apply the mixture and let it dry, then rub off with a soft cloth and polish with a piece of soft flannel.

A little salt rubbed wet in a spoon will remove egg stains; and lemon juice and salt will remove medicine stains from silver.

Wash the outside of fancy glass pieces with a stiff brush and warm suds, then dry thoroughly and rub with a cloth dipped in alcohol and then in whiting and polish with soft cloths; and even the cheap ware will compare favorably with the finest cut glass if it is cleaned and polished often.

Both the glass and china dishes can be kept shiningly clean by stirring enough soap chips in hot water to make a nice lather and then washing the dishes through the suds; then they must be rinsed in clear hot water and dried with one towel and polished with another, free from lint.

There is nothing better than the suds made with soap chips for washing the tray cloths and napkins and all pieces of table linen. The borax in the soap chips softens the water and whitens the fabric, and they need very little rubbing when they are washed in this way: Stir the suds to a nice lather, then put in the pieces and let them remain for half an hour, then rub out and rinse, and the linen can be made just stiff enough by putting the pieces through strong borax water instead of starch, and this gives a nice gloss to the linen, and linen washed in this way comes out beautifully white and clean.

You can clean vinegar cruets and the like by putting pieces of raw Irish potato in the bottle with hot suds and allowing them to remain over night, then in the morning give the bottle a vigorous shaking and a good rinsing out. A cloth wet in hot water and wrapped around the neck of a bottle will usually remove the glass stopper, as the heat expands the glass and loosens the stopper.—M. H.

African Pork Imported Into France.

Consul Louis Goldschmidt, of Nantes, calls attention of the Department of Commerce and Labor to the importation of Algerian hogs into France. A steamship brought from Oran, in Africa, to Dunkirk 250 hogs for butchers at Dunkirk, Bethune, Arras and Paris. Other shipments are to follow, and this trade is apt to assume considerable importance.

The farmer who has not had his soil analyzed is sure to buy the wrong fertilizer.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

To Buy Groceries Right.

On page 7 will be found an advertisement of Montgomery Ward & Co., relating to their pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establismment.

New Stories For Older Children to Read.

Somewhere between the ages of twelve and fifteen most children begin to lose interest in the childish stories that have heretofore entranced them. Then they look about for something more to their changing taste. I have seen a book snatched from the hands of a fourteen-year-old girl with the remark: "Your're too young for love stories." The girl read the book, but she did it on the sly, and was hurt far more my the act of deception than by the love tale. If children are normal they will naturally at this age feel an awakening interest in all things pertaining to love, and isn't the love theme a beautiful one, provided always that the story is of a pure, uplifting love? No one will deny that there is untold harm done by allowing maturing boys and girls to read indiscriminately whatever they lay their hands upon. But there is also great harm done by forbidding love stories with an all-inclusive sweep. Hasn't the Good Book some of the most beautiful love stories the world will ever know?

"But I don't know what stories to let them read. I have no time to read these books first myself," cried one earnest, discouraged mother. These days when young people can so readily obtain from the public library, the school, the Sunday school, the circulating and the various home libraries nearly all of the newer publications, among which are many that are unfit reading for children, and adults as well, it is a much harder matter to keep only pure reading matter in the hands of our children than in the days when resources were more limited. But there are many worth-while stories among the publications of the last few years, and for the sake of puzzled mothers let us run rapidly over a very few of such.

Anything that Grace Richmond writes can be safely placed in the hands of growing boys and girls. She is a writer of lively and lovely stories which young people delight in. They are always thoroughly clean and uplifting. "Round the Corner in Gay Street" and "The Second Violin" are the two best suited for young people of the age under discussion. The first tells of a family of seven merry young people who make the most of their poverty as they live in a wee house just around the corner from a mansion in Worthington Square. The wealthy young people in the mansion begin to find their chief interest in [illegible] the little house around the corner, and there is a beautiful love affair between the two families. "The Second Violin" recounts the adventures af a family temporarily orphaned. Grace Livingston Hill Lutz is another writer whose literary products are always sweet and wholesome. Her "Marcia Schuyler" and "Phoebe Deane" are stories well worth reading. "The Lady of the Decoration" by Frances Little, is a clever little story of a young woman's life in Japan, told in the form of letters. She has left a "Jack" at home, and the love story running through the volume is a tender one. There is, however, hardly the childishness about this volume that will appeal to some of the young people who just begin their ventures in grown-up stories. The boys and girls who have read "Mrs. Wiggs" and "Lovey Mary" by Alice Hegan Rice will want to read her "Mr. Opp." It's very different than her other stories, but Mr. Opp is a character whose acquaintance it is worth while to make, and were there only more Mr. Opps in the world, how much brighter a place it would be! Then there are "Freckles" and "A Girl of the Limberlost" by Gene Stratton-Porter. I wish every boy and girl in the world could read them. They are pure, sweet, soul-inspiring. The boys will be more manly for the reading and have higher ideals of womanhood; the girls will look for manliness in their boy friends and will strive after some of the sweetness shown in the strong character of the Limberlost girl. Mention must be made of "Ann of Green Gables" and its sequel "Ann of Avonica." Ann is an orphan who is sent by mistake to the home of a bachelor and his maiden sister. They keep her, however, and Ann and her "imagination" lead them a life for a few years. But Ann is too sweet to win anything but love in the end. She is always refreshingly original. The author is Mr. L. M. Montgomery. "Rebecca of Sunnybrook Farm," "New Chronicles of Rebecca" and "Rose o' the River" are by Kate Douglas Wiggin, and are fascinating. There are, of course, many other excellent stories among the comparatively new books for children and young people, but we hope that even these brief suggestions may give help to some of the busy, puzzled mothers. —Janet Thomas Van Osdel.

Canadian Hay For the United States.

As to the possibility of importing hay into the United States from Ontario, Consul James M. Shephard, of Hamilton, reports that the hay crop of 1910 was much larger than in 1909, and that the prices are much lower, partly on account of the surplus and partly on account of the poor quality of a portion of the product. Farmers are getting (November 18) for loose hay in their wagons from $14 to $16 in the Hamilton hay market; but the largest dealer says that he has a good quality at Brantford, twenty-four miles from Hamilton, at $12 f. o. b. at that place. The freight on hay from Hamilton to New York is $4.70 per ton, and the American duty is $4.00 per ton.

A Woman Wants What She Pays For
In buying a watch, or anything else, a woman is practical.
She has an eye for style and beauty of design: but she insists on value, and gets it wherever there is a standard to judge by.
She demands a reliable make of watch. She asks for it by name—but she doesn't know, perhaps, that the name refers only to the works. The place she is in danger of being fooled is in the watch case—where standards are frequently cheapened in a way that doesn't show on the surface.
Now she can be sure of absolute integrity in bullion value, in assay and in the workmanship of her watch case if she will look for our marks inside the cap of the case.
These trademarks are her safeguard. They are standard with the fine jewelry trade and have been for fifty years.

The Walkers.

James M. Beck, the famous corporation lawyer of New York, is a native of Philadelphia, and to Philadelphia he often returns to see his old friends.

Mr. Beck, at a recent banquet in Philadelphia, defended corporations with an epigram.

"The trust buster and the Socialist may do what they please," he said, "but mankind will still be divided into two great classes—those who walk to get an appetite for their dinner and those who walk to get a 'dinner' for their appetite."

Unattainable Heights.

"Surgery," said Simeon Ford, at a dinner in New York, "accomplishes wonders nowadays. Hearts are sewed up, the appendix is removed, the large intestine is done away with. But—"

The noted humorist smiled.

"But will the time ever come when surgery will be able to remove the cheek of a young man or the jaw of an old woman?"

It has been said of the world's history hitherto that "might makes right." It is for us and for our times to reverse the maxim and to show that right makes might.—Lincoln.

A Town Rest Room For Women.

When the man finishes his town trading, he joins a group of his fellows at some convenient meeting place, and has a good time visiting until the meal is ground or the horses shod and he can start for home. When the woman finishes her trading she wanders lonesomely about the streets or stands about in the store, feeling herself in the way and wishing it were time to go home. If she is so fortunate as to have friends nearby she may go to visit them, but there is always the likelihood that her husband may be ready before she gets back and he would be "put out" if she made him wait. Then. too, her "wait" may not be at a time to call upon even near friends. It may be too near the dinner hour; they may have company; it may be a busy day with them—a number of reasons why a thoughful woman would hesitate to intrude at any and all hours.

From time to time there has been agitated the question of a town rest room for country women to use on just such occasions. Letters from women who have been questioned on this subject show that country women are very much interested in the idea and many of them are eager to see it materialize. They feel that such a room would make a real pleasure trip of their town visit. But if these rest rooms are ever to be, most probably the country women will have to start them themselves, and it is very probable because no one has been willing to take the first step that as yet there are so few of these rooms.

The women from the country stretching in all directions from the town can use the one room. Suppose one or two interested women call on their nearest neighbors and these in turn pass it onto their neighbors; then start the good word on other sides of the town by the use of the telephone. Assured that there is a real interest among the women who would get the benefit of the room, ascertain for what rent such a room centrally located can be had. It will not be very high at most. Suppose the rent for a good-sized room is seven or eight dollars a month. If there are fifty women willing to share that expense, it would mean an assessment of about fifteen cents per month for each member. Let the furnishings be contributed by whoever has something to spare. A little rummaging in attics will produce the desired rugs, chairs and perhaps couches. Have a couple of couches, even if they must be made of pine boards laid on horses. Then put a pad on them and pile high with pillows. A ten-minute relaxation while in town may prevent many a headache and backache. Also provide some kind of a table and let the women place upon it whatever they care to in the way of periodicals and books. This will provide fresh reading matter for many women. If it is desired to carry out this idea a little farther, make arrangements to have women carry home something in the way of reading matter, writing their name on a pad kept for that purpose and stating when the borrowed matter will be returned. Also have in the rest room a little oil or alcohol lamp and a few cups and saucers. Women who care to can then make themselves a cup of tea or chocolate. While there need be no regular club organization, someone should be chosen as general manager from year to year, so there will be a head to whom matters may be referred, and there must also be a treasurer to collect the rent assessments.

So you see, really, dear women, the idea is very practical and not hard on any one person, provided each woman is willing to do her share and there is the right spirit of co-operation. It just needs some person to start the good work, and perhaps you are the one to do that. Can we not each one do our part?—Janet Thomas Van Osdel.

I Guarantee to Cure

ECZEMA
TO STAY CURED!
It is also called SALT RHEUM, SCALD HEAD, TETTER, ITCH, WEEPING SKIN, MILK CRUST, PRURITUS—these are different names, but all mean one thing—ECZEMA.

DR. J. E. CANNADAY THE DOCTOR WHO TREATS NOTHING BUT ECZEMA.

I prove every word that I have said—I give to every sufferer

A FREE TRIAL

Just to show you that you need my treatment. It is yours for the asking. If you have been to other Doctors, if you have taken patent medicine, and used lotions and salves till you are disgusted, write to me—I will send you ABSOLUTELY FREE OF CHARGE, A TRIAL TREATMENT. There are no strings to this statement. There is not one cent to pay—not a penny accepted. I know what my trial treatment will do; I know that it will convince you more than anything else on earth that you need my treatment.

Reliable Beyond Question

This is a statement from the bank of my home town, where I have done business for years.

THIRD NATIONAL BANK,
Sedalia Mo Jan.-1-1910.

TO WHOM IT MAY CONCERN:—
Dr. Cannaday, of our city is a physician, making a specialty of ECZEMA. We have handled his business exclusively for one year and eight days. His patients deposit their money with us, in their OWN NAME, to be paid to the doctor, if his treatment is satisfactory. If we remember correctly, we have been called upon by only FOUR of his patients for their money, and it seemed then, that the fault was more with the Express Companies than with the treatment failing.
Considering the number of cases he treats, we regard his success as remarkable. We consider him perfectly reliable, and assure those placing their money with us a fair, square, business deal.
Yours Truly,

Don't Miss This Chance for a Cure

If you are SUFFERING FROM ECZEMA you can only be cured one way—REMOVE THE CAUSE. What is the cause? ACID IN THE BLOOD. How do you remove it? By cleansing the blood of the ACID.

My treatment is soothing—relieves the dreadful itching at once and cures the disease quickly. You don't have to take treatment for months and months. ONLY ONE CASE IN TEN needs the second treatment—ONE IN FIFTY needs the third—think of that!

What Eczema Is

Eczema is a disease of the blood and affects all parts of the body—the face, lips, ears, hands, feet, genital organ, etc.

SYMPTOMS.—Yellowish red eruption; the pimples or patches may swell and the itching is so great the person will scratch the top off, then they bleed and dark scales form; there is an oozing of matter. In some the skin cracks and bleeds. Itching is terrible; a person suffering will scratch till they bleed. Scales form on parts of the body, where the clothing comes in contact.

Ten Years Guarantee

I positively Guarantee that every case cured by me will stay cured 10 YEARS! It must be good or it could not be sold this way.

Strong as Rock of Gibraltar

I am a graduate from two leading medical schools. I am the holder of a GOLD MEDAL taken in Competitive Examination. Does this not show that I am fully qualified? I will send you my book, showing endorsements of business men of all classes. Also testimonials and pictures from cured patients everywhere. Some of them may be YOUR NEIGHBORS.

MY BOOK

Is the most complete book ever sent out. I explain every form of the disease plainly and fully. I show pictures of many severe cases, which are extremely interesting. I send you names of thousands who have been cured and are grateful.

Washington, D. C.

A correspondent writing asks the question: "Which is the simplest and safest branch of stock raising for the general farmer?" The answer without hesitation is "hog raising." Someone will dispute this, but no dispute will change it.

How to Stop Pimples

In Five Days You Can Get Rid of All Skin Eruptions by the New Calcium Sulphide Wafers.

Trial Package To Prove It Sent Free.

Any man or woman gets awfully tired going around with a pimply face day after day. And other people get awfully tired, too, seeing them go around with faces full of disgusting pimples.

If you are one of the unfortunates who can't get away from your pimples, and you have tried almost everything under heaven to get rid of them, take a few of Stuart's Calcium Wafers every day. Do that steadily for a few days, and in less than a week look at yourself in the mirror.

You will then say that Stuart's Calcium Wafers are a wonder in getting rid of the eruptions.

These wonderful little workers contain the most effective blood purifier ever discovered, calcium sulphide.

No matter what your trouble is, whether pimples, blotches, blackheads, rash, tetter, eczema or scabby crusts, you can solemnly depend upon Stuart's Calcium Wafers as never-failing.

Stuart's Calcium Wafers have cured boils in three days and the worst cases of skin diseases in a week. Every particle of impurity is driven out of your system completely, never to return, and it is done without deranging your system in the slightest.

Most treatments for the blood and for skin eruptions are miserably slow in their results, and besides, many of them are poisonous. Stuart's Calcium Wafers contain no poison or drug of any kind; they are absolutely harmless, and yet do work which cannot fail to surprise you.

Don't go around with a humiliating, disgusting mass of pimples and blackheads on your face. A face covered over with these disgusting things makes people turn away from you, and breeds failure in your life work. Stop it. Read what an Iowa man said when he woke up one morning and found he had a new face:

"By George, I never saw anything like it. There I've been for three years trying to get rid of pimples and blackheads and guess I used everything under the sun. I used your Calcium Wafers for just seven days. This morning every blessed pimple is gone and I can't find a blackhead. I could write you a volume of thanks. I am so grateful to you."

Just send us your name and address in full today, and we will send you a trial package of Stuart's Calcium Wafers, free to test. After you have tried the sample and been convinced that all we say is true, you will go to your nearest druggist and get a 50c. box and be cured of your facial trouble. They are in tablet form and no trouble whatever to take. You go about your work as usual, and there you are—cured and happy.

Send us your name and address today and we will at once send you by mail a sample package free. Address F. A. Stuart Co., 175 Stuart Bldg., Marshall, Mich.

Possibilities of the Hen.

Prof. Geo. M. Turpin, of the Utah Agricultural College, in Farmers' Institute lectures, said:

"In looking over the government reports on egg production, I find that the average egg yield per hen in the United States is about sixty-five eggs; for Utah it is seventy-six, while for the state of Maine, away over here in the coldest parts of the country, it is 100. At first thought, this doesn't seem to indicate that climate has very much to do with the success of the business, notwithstanding all that we have said about it. But it does have, and the only reason that this condition exists is because there is one requisite necessary for success that nature aside from the efforts of man does not provide, and that is, first and foremost of all, attentive, intelligent management. The fact that the average farm hen of our own state lays scarcely more than six dozen eggs per year, while the least of every well managed flock need not be less than ten dozen, can only be accounted for by a lack of appreciation for this most essential of all factors.

"In order to further call your attention to the possibilities of the much neglected hen, we are showing here a picture of one of our college hens with the number of eggs she has produced in each of two consecutive years, together with the amount of feed that she consumed in one year. This is a white Leghorn hen, weighing about two and one-half pounds. There are two hundred eggs in the pile, averaging about twenty-five pounds, while the total amount of feed that you see represented is about 100 pounds, this representing, as stated, about the amount of feed as well as the kind that a laying hen requires in a year. If a thousand-pound dairy cow were to produce as much dry matter in the form of milk and consume as many pounds of feed in comparison to her body weight as this Leghorn hen, she would have to eat twenty tons of feed in a year and produce twenty tons of milk, which would make about 1,600 pounds of butter in the same time. That this particular hen is not a great abnormality is shown in the fact that we have at the college about twenty hens that have equaled this one's record, and that in the famous egg competition at South Australia last year, where about 400 hens were entered, the average egg yield for the whole lot, all kinds included, was about 190 eggs per year per hen. As a matter of fact, we have no other domestic animal that has the capacity of the domestic hen for consuming such a large amount of feed and manufacturing it into such a highly concentrated and high-priced food product, a fact that stands as the best of reasons for the growing popularity of the poultry industry."

An Experience With Spinach.

Balcom, Ill., December 29, 1910.

To the Editor:—Some years ago I plowed up an old plot of land that was said to be worn out and worthless. I went to great trouble and expense to restore fertility. About the 1st of September I bought four car-loads of manure and broadcasted the manure on a little over two acres of it. I then took the disc and worked the manure into the soil. Then sowed fifty pounds of spinach seed and harrowed it thoroughly, following the harrow with a heavy iron roller. We had plenty of rain to keep the ground moist.

In eleven weeks I began to put the spinach on the market. I shipped 2,100 crates of spinach to Chicago. The gross sales amounted to $785. My expenses were as follows:

Express charges, 14 cents on 2,100 crates	$294.00
Cost of crates, 2,100, at 7 cents each	147.00
Cost of manure, including freight	101.00
Commission on sales	78.50
For labor cutting and packing	63.00
For seed	5.00
Total	$688.50
Gross sales amounting to	$785.00
Expenses	688.50
Net gain or profit	$96.50

It will be observed when $81 of freight charges on manure is added to the express charges, that the railroad and express companies obtained $375 out of the transaction. The shipments were made over the I. C. Railroad to the Chicago market.

If I could have shipped that crop of spinach from Wolf Lake (a shipping point on the branch line of the I. C. Railroad, and by the same express company), there would have been a saving of $84 in express charges. Wolf Lake is only fifteen miles across country from Balcom, but the I. C. Railroad has competition there. The Iron Mountain Railroad runs through Wolf Lake. The rate at Wolf Lake is 10 cents per crate on spinach to Chicago, and from Balcom the rate is 14 cents per crate to Chicago.

We need a good medium that has the interest of the growers at heart to expose transportation frauds, beginning at the first car that was ever shipped over the I. C. Railroad by the old Grange many years ago, and to help the grower to correct the many inequalities that now exist.—H. M. Plott, Balcom, Union county, Ill.

PRACTICAL FARMING AND GARDENING.

This is a book of 500 pages, 6x7½ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Late Butter Quotations.

The January 30th butter quotation at Elgin was 25 cents a pound, against 25 cents the week before; 31 cents a year ago; 29 cents two years ago; and 33 cents three years ago.

BUSINESS NOTICES.

G. D. Sutton Company, seed corn growers, right in the heart of the best seed corn district of Illinois, started the season with 50,000 bushels of superior selected seed corn. Write for seed corn book to G. D. Sutton Company, Box 7, Mason City, Ill. You can buy corn in the ear or shelled and be sure of obtaining pure-bred seed gathered early and dried by the most improved methods.

The Elkhart Carriage and Harness Mfg. Co., of Elkhart, Ind., advertise their Pratt-Elkhart Forty-horse-power Automobile on page 15. This firm has been well and favorably known to farmers for thirty-eight years.

A Reliable Firm.

A. J. Child & Sons, advertising Matchless Fence on page 12 and roofing on page 9, have done business direct with farmers for thirty years. They send goods that satisfy their customers.

Blood Poison 30-Day Treatment FREE

Remarkable Results Produced By New Vegetable Treatment Without Use Of Mercury or Potash.

The terrible results of mercury and potash on blood poison are well known. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms often break out, and you find that your bones have been rotting all the while. Your teeth may begin to loosen and your tissues, glands, brain and vital organs show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Medical authorities admit that this is so.

The remarkable new treatment, called the Obbac Treatment, is purely vegetable, containing positively no mineral poison whatever, no mercury, potash, narcotics or opiates. It has produced remarkable changes in only 30 days. Treat yourself privately at home, and become as free from taint as a new-born child.

The wonderful Wasserman Test, the only blood poison test known to scientists, has proven that a man has been completely purified by the Obbac Treatment.

Don't spend months and years of your precious life, and destroy your health forever by taking mercury and potash which doctors commonly prescribe. Write today. Send your name and address and complete description of your case to the Obbac Co. 1197 Obbac Bldg., Chicago, and they will send you, once in an absolutely plain, firmly sealed package, a full 30-day treatment absolutely free.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a **quick recovery**, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

Please be sure to give the size of pattern ordered and write your own name and address plainly that no mistake can be made to cause delay.

Kindly address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone manufacture. In order to understand this subject, see page 23. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

Raking the Air.

Mayor Hemse, of Nashville, was condemning those officials who, instead of quietly reducing law-breaking, prate noisily about it in the newspapers.

"Such fellows are all right, no doubt," said Mayor Hemse, "but they will rake with the teeth upwards."

QUICK HAIR GROWTH!
Brochure Free To You.

Would You Like Such a Result as This.

HERE IS THE TRUE METHOD

Let us prove to you that the Koskott Method of hair growing is the **genuine, scientific one.** We will send you a valuable brochure **FREE.** Our Method is directed at removing the cause, *dermodex folliculorum*—living micro-organisms—germs—and opening the closed follicles so that the hair roots which are not dead, but dormant, (like a tulip bulb, or grass seed in a bottle) are given fertility **and a chance to grow. Spare Moments.

"Dost thou love life? Then do not squander time," says Franklin, "for that is the stuff life is made of." We have all read innumerable stories of things which have been accomplished in spare moments, and yet in our every-day affairs of life—we forget it all.

Not a day passes but that the housewife lets slip a few of the precious minutes just because there is a necessity for waiting at some portion of the work, and nothing else is made ready to take its place.

Our grandmothers always had the knitting work at hand, ready to put in every minute while waiting for the kettle to boil or for the men to come to dinner, some of them even carrying the frugality to such a limit that they knit when walking to a neighbor's house. But the knitting machine and loom have largely banished the home-knit stockings.

Yet now there is a return to the handicrafts, not as a source of economy, but of pleasure. And the home-made article is of more real value than the store purchase.

A little skill with the crochet hook will work wonders during the spare moments, as this is work which can be picked up and put down at any stage. In this respect it has an advantage over tatting; besides, it is more speedy. Though there is certainly no fancy work more beautiful than tatting, unless it be lace, and this is less durable than either tatting or crochet.

The Irish crochet is more than popular now; and while the elegant costumes in which it figures so largely are not for the ordinary home, touches of it here and there brighten a dress and give an air of richness. A dainty lace to finish the neck of a child's frock can be quickly made thus, and is more pleasing in effect than any but expensive lace.

If possible, get the Irish lace thread, 42 being a good number for ordinary use. Common cotton thread will do, but the result is less pleasing, and since you have more time than thread in the investment, it pays to get the best.

Knit a chain about one-fourth longer than you wish the finished lace. Chain seven stitches and make one picot by making a single crochet into the fourth stitch. Chain seven, another picot, chain three, single crochet into fifth stitch of foundation chain. Continue thus to end of chain. Turn and go back in the same way, catching each of the two-picot chains into the middle of the loop in the row previously made. Turn and make two loops in the third row in the same manner. Chain seven stitches, picot, chain six and catch with single crochet in the usual place. Turn, and in this loop of six stitches make nine single crochet. Turn, and on these nine make nine double crochet. Chain three and catch down in same place as before. Make two more of the chains with two picots each, then a third as before, and so continue to the end. Turn, and make a loop of twelve chain stitches in each of the last series made. Turn, and make twelve single crochet in each of the loops last made. This gives a button-hole finish at the edge.

After making Irish lace, wash and starch, and, when nearly dry, it should be pulled into place, and never ironed.

The stitch given above is the filling used for most of the elaborate pieces, and when this is mastered other forms will gradually come. The rosettes are not hard to make, and for a Dutch collar about five are needed. These are usually basted upon a paper pattern of the required size and the space between filled in with the work described above. Done by the hour, it would prove expensive, but one may work during spare moments and have some really fine work almost before they are aware of it. But never work in poor light. The eyesight is worth more than fancy work.—Bessie L. Putnam.

Our Friends, the Birds.

Instead of buying a canary for the little one, save the time spent in caring for it in watching the wild birds. There is really more pleasure in this than in keeping a pet behind prison walls. The winter birds are still here, and as they are fewer in number, it is easier to identify them than the many which come later. Besides, cold weather has a tendency to make them friendly with us, the more if we strive to make them comfortable by supplying in part their needs.

If the snows still linger, do not neglect the food; and, having once commenced to feed them, it is highly essential to keep it up until pleasant weather comes. Scatter a variety of crumbs and small grain on the window ledge, or at least high enough that the birds may be safe from cats.

By having a lace curtain before the window one may watch their feeding at comparative close range. And the little one can be taught to keep very quiet while the birds eat lest he scare them away. This will not only be a means of passing away time, but it will add much of lasting value to the child's knowledge of bird life.

As soon as the birds commence to look for material to build the nest, put out a plentiful supply of strips of cloth and twine, hanging them where they cannot escape the sight of the little singers. Let them be not over a foot long. This will give ample room for them to work in most acceptable forms, and not give danger of one being caught in its own meshes and perhaps getting hung or imprisoned.

Teach the children to watch every bird movement and interpret it, from the coming of the first robin, which walks sedately along the freshly-plowed furrow, hunting for grubs. Just how many insects a single bird will consume in a season it would be impossible to tell.—Bessie L. Putnam.

Cement Block Machines.

The simple cement block machines first put upon the market were extravagant in cost, far beyond any excuse for the price asked, and this had the effect of turning away the minds of many people who wished to use concrete in simple ways. Others who were ingenious made their own cement block machines, and so the work has progressed.

Builders and contractors do a large majority of their work by first constructing the moulds and filling them in with concrete. But there yet remained the demand for a machine that would manufacture cement bocks of all moderate sizes economically and turn them out rapidly. This want has been supplied by a Swiss machine which, being manufactured in the United States, is recommended by the United States government as being the most complete and satisfactory cement block machine made. Any of our readers having cement construction in view will be placed in communication with the manufacturer by addressing this office.

Instant Relief for the DEAF

Accept Our Offer Today

Deaf or partially deaf people need no longer suffer all the agonies, inconveniences and embarrassments which they have had to endure, when they can test for themselves the **Electrophone** on

30 Days Home Trial

The Electrophone in use, almost invisible. Less conspicuous than eyeglasses.

Send us the coupon below for particulars of our service test offer. Get an Electrophone and try it for a full month in your home. See for yourself how **clear and distinct** it will make all sounds. Take it to the church or theatre with you, sit in the back row if you like, and enjoy every word, every note. It has marvelous sound magnifying powers. Investigate how easily it overcomes ear noises. Let it take the place of trumpets, ear drums and other similar contrivances which are old fashioned, out of date and often very harmful. The Electrophone has been really a God-send and a blessing to many thousands of deaf people. Can be worn as easily as a watch, leaving both hands free. Put it to any test you please for a month and prove to your own satisfaction that it can amply meet your every demand. By that time you can judge for yourself whether it has proved itself almost invaluable like it has to so many others.

Read these letters

"I think the Electrophone is the best device for people that are hard of hearing that there is on the market as I have tried everything I ever saw advertised." *W. A. Haggin, Union, Ia.*

"If it could not be replaced nothing short of a load of lead would compel me to part with it. Enclose self addressed envelope and stamp and I will cheerfully give anyone information within my knowledge." *R. T. Roberts, Sidnaw, Mich. Roycroft Farm.*

A GOOD SEED HOUSE.

Our readers who are not acquainted with the A. A. Berry Seed Company, Box 222, Clarinda, Iowa, should write them to-day for their new 76-page illustrated catalogue, just off the press. They have been dealing direct with the farmer for a good many years and have the reputation of being one of the strongest and most reliable concerns in the West. They guarantee all seeds that are sent out. In order to become better acquainted with our readers, they are making you an exceptional offer. To every person sending in their name they will send absolutely free two packets of sorted seeds.

ECONOMICAL HAY HANDLING.

The Louden Machinery Company has perfected hay, litter and feed carriers, each item actually saving the cost of a man on a farm. It seems strange that a grapple fork will do the work of several men, but it is true. The advertisement is on page 6. This firm issues a valuable book on manure and how to care for it which is worth having. Address, Louden Machinery Company, 651 Broadway, Fairfield, Iowa.

KITSELMAN'S FENCE.

If you want to save money on your purchase of fence, write Kitselman Brothers, of Muncie, Ind., for their free catalogue. They are selling fence direct to the farmer on thirty-days' free trial for 13¼ cents a rod up. See their ad. in this issue on page 5.

AMERICAN WONDER SEPARATOR.

One of the smallest and handiest cream separators on the market is called the American Wonder Separator. This is especially adapted for those who have but few cows. It will pay a farmer if he only has one cow. The cost is only $15.95 for an up-to-date complete separator, made of the very best materials and of the latest design; skimming over a quart of milk a minute and doing it perfectly. When a machine like this can be obtained for so low a price, then certainly no one making butter, no matter how little, will do so without a separator. This machine being made and sold by the oldest exclusive manufacturers of hand cream separators in the United States, our readers need not for one moment hesitate to approach them; in fact, everyone interested at all in cows should write the American Separator Company, Box 1102, Bainbridge, N. Y., for their $15.95 proposition.

Children's Underwear.

If it is necessary to economize closely, nearly all of the children's underwear can be made from old material, and the garments will be as warm and serviceable as new ones, and as pretty, too, with a little bright trimming. By the help of a yoke, warm pants can be made for small children of the legs of women's worn cashmere hose, and when making underwaist for these small garments, face three inches deep at the bottom and sew on a spaced row of buttons near the edge and another two inches above for holding the pants and underskirts, as the weight of these garments should always be suspended from the shoulders.

In cutting children's garments from those of adults, have the sleeves and the legs of pants a good length, as the wrists and ankles are very susceptible to cold and should be well protected.

To lengthen underskirts, make a circular yoke of cotton and sew the skirts to this, or put a facing around the bottom of the skirt and cover this with some bright trimming.

When the heels and toes of stockings are lined before being worn they will last three times as long as they otherwise would; and when the knee and heel begin to wear thin, cut the stockings in two where the foot and leg join. Turn the front of the leg to the back, trim so as to make shape for heel and sew securely together. It is a good plan to wash all the stockings by themselves, and by washing them through warm borax suds they may be kept soft as long as they last, and it is best to allow them to soak in the suds before rubbing them out.

There is nothing better than the borax suds for washing the underwear and flannel skirts, as the borax softens the water, and hard water will ruin such articles, and the borax suds, made with good, white soap, is especially good for the all-wool flannels worn by young children. Flannel knickerbockers are in every way better than so many heavy skirts, especially for girls in the country, and when they are worn, one woolen underskirt is sufficient, save in extreme cold weather. These should be made of the same material as the dress, cut three inches short at the top and attached to a cotton circular yoke, opening at the left side. These pants are warmer than a skirt and much better for them to run and play in.—Martha.

To Keep the Figure.

Mrs. Chapman Catt, the suffragist leader, had her attention called at a dinner at the Colony Club in New York to a stout young woman who was very tightly laced.

"'Look at her,' said Mrs. Chapman Catt's neighbor, 'she's passing every dish. She is actually laced too tight to eat.'

"'Yes,' said the other. 'It's a case of grace before meat, isn't it?'"

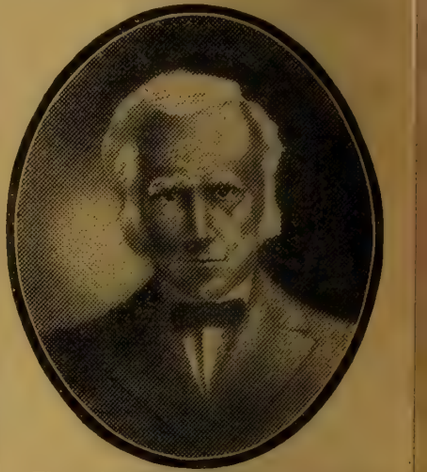
The Cement Workers' Handbook advertised on page 23 is a subscription premium that is well worth studying. Read about it.

Piles Quickly Cured At Home

Instant Relief, Permanent Cure—Trial Package Mailed Free to All in Plain Wrapper.

Piles is a fearful disease, but easy to cure, if you go at it right.

An operation with the knife is dangerous, humiliating and rarely a permanent success.



There is just one other sure way to be cured—painless, safe and in the privacy of your own home—it is Pyramid Pile Cure.

We mail a trial package free to all who write.

It will give you instant relief, show you the harmelss, painless nature of this great remedy and start you well on the way toward a perfect cure.

Then you can get a full-sized box from any druggist for 50 cents, and often one box cures.

Insist on having what you call for.

If the druggist tries to sell you something just as good, it is because he makes more money on the substitute.

The cure begins at once and continues rapidly until it is complete and permanent.

You can go right ahead with your work and be easy and comfortable all the time.

It is well worth trying.

Just send your name and address to Pyramid Drug Co., 286 Pyramid Building, Marshall, Mich., and receive free by return mail the trial package in a plain wrapper.

Thousands have been cured in this easy, painless and inexpensive way, in the privacy of the home.

All druggists, 50 cents. Write today for a free package.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powderpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r, 418 North street, Adams, N. Y., and he will send you a free trial package, also color card and full information, showing you how you can save a good many dollars. Write to-day.

Build Your Own Incubator

ANYONE can easily do it and save good money. I have a great big interesting free book which shows you how. My parts are the best and most economical in the world. Write today for Free Book and let me show you how to save incubator money. H. M. Sheer, Dept. 47, Quincy, Ill.

FAULTY METABOLISM

AS A COMMON CAUSE OF DISEASE, is the subject discussed in Bulletin No. 1 of the Shafer Pathological Laboratory. The Bulletin is sent free on request and will prove interesting to everyone in Pain and Poor Health.

Address: John F. Shafer, M. D. 106 Penn Ave., Pittsburg, Pa.

Novel Rescue From a Wild Horse.

Barney Kent, a Fort Plain, N. Y., horseman, was wounded as a result of a battle with a vicious stallion. He was bruised and battered by being dashed to a cement floor and trampled upon and his left hand was mutilated by the animal's teeth. He was alone in a box stall with the stallion and nobody dared to go to his rescue. Directly across the street Gifford Wood has a novelty store. He was selling some powder, such as mischievous boys are found of circulating in public places and causing general sneezing and coughing to all who inhaled it. Wood scattered a quantity of the powder around the horse, which caused him to be attacked by a fit of sneezing that enabled onlookers to drag Kent out from the stall.

How Farmer Schultz of Kansas Fooled His Hogs.

Adam Schultz, McLouth, Kansas, is a prosperous farmer and well known hog raiser in that section of country. Like most other farmers he is occasionally called upon to face a threatened epidemic among his hogs. Recently Mr. Schultz noticed that his drove was not eating as they should, and as one of the first symptoms of serious hog troubles is "getting off their feed," he determined to fool his hogs by slipping in some Merry War Lye with their feed. Just how successful this ruse was, let Mr. Schultz tell in his own words.

He writes: "Before I began feeding Merry War Lye my hogs did not eat as they should when they were doing as they ought to. They looked rough, and their hair was rough, and sometimes some of them would not eat at all and some would eat a little and then go and lie down. But after I had fed Merry War Lye about eight or ten days, I could see marked improvement.

"They began to all come out at meal time and take a hold as they should to eat and began to feel happy as they came to eat. They jumped and played as they did not do before, and they now look sleek and are thrifty. I fed only nine cans of Merry War Lye to about fifty-six hogs, and every one is doing fine.

"I consider this Merry War Lye the best hog remedy I have ever used, and the cheapest. I have spent a good deal of money at times when my hogs were not doing right, but I never got the results from any of the so-called hog cholera and worm remedies that I have from Merry War Lye." See page 15.

Awful Game of Foot Ball.

Paul Withington, the Harvard coach, was praising the milder foot ball of 1910:

"Foot ball in the '90s was a terrible game," said Mr. Withington. Some of the stories of the foot ball of '90 or '91 are, in fact, almost incredible.

"A Philadelphia sporting editor returned one November Saturday from West Philadelphia with a pale, frightened face.

"'Many accidents at the game?' a police reporter asked him.

"'One frightful accident,' replied the sporting editor. 'A powerful mule from a neighboring coal dealer's entered the field, blundered into one of the hottest scrimmages, and got killed.'"—Washington Star.

Truthful Lawyers.

Representative Nye, of Minnesota, has much of the wit of his lamented brother, Bill Nye. Himself a lawyer, Representative Nye said at a lawyer's banquet in Minneapolis: "Lawyers have grand reputations for energy and perseverance. A lad said to his father one day: 'Father, do lawyers tell the truth?' "'Yes, my boy,' the father answered: 'Lawyers will do anything to win a case.'"—Washington Star.

Top-price Native Cattle.

On the last day of January, at the St. Louis National Stock Yards, Cherry & Son, of Macoupin county, sold seventeen choice Hereford steers, 1,580 pounds average, at $6.90 per 100 pounds. These cattle brought the top of the market for native cattle.

Baby Beef Cattle Sell High.

At Chicago, January 25th, the top of the market for beef cattle was $7.00 per 100 pounds, obtained by Clay, Robinson & Co. for twelve head of Hereford steers and heifers, 1,034 pounds average, bred and raised by W. A. Parrish, of Yeddo, Ind., and shipped by Cook & Williams, of Veedersburg, Ind. This was the third time in three days that cattle sold by Clay, Robinson & Co. topped the market.

Horseradish is selling at St. Louis from farmers' wagons at $5.25 to $5.50 per barrel.

SALESMEN WANTED

Trained Salesmen earn from $1,200.00 to $10,000.00 a year, and expenses. Hundreds of good positions now open. No experience needed to get one of them. A MACHINE NOT A DRAG.

The **only** weeder for **Cotton**—the **best** for **all crops.** It is always under positive control, cutting deep or shallow, light or heavy, changing from one to the other instantly, as **directed** by the **boy** driver who **considers it play. The King,** unlike the old drag weeder that collects trash, drags out plants and is so difficult to handle, is a **weeding machine** that glides easily and smoothly, striking light or heavy as desired—the teeth may be thrown a foot high and held without a particle of strain on the driver.

AGENTS MAY SECURE SAMPLES AT NO MONEY COST.

Thos. Thompson, says: "I credit your weeder with 8 **bales of cotton** this year."

W. N. Pittman, says: "I wouldn't take $50.00 for it. I worked my entire crop with it."

L. C. Cooke, says: "Paid for itself twice in corn alone. Made me two extra bales of cotton."

Chas. Johnson, says: "My little girl ran the machine over my Crop and made me 3 extra bales."

Jesse Williams, says: "I wouldn't take $50.00 for my King Weeder and do without it."

More than two thousand other proofs on file.

THE KING DISTRIBUTOR.

Puts out fertilizers **in drills,** two rows at a time, or on both sides of **two lists,** or on both sides of two rows of the growing crop—it broadcasts any quantity of fertilizer, phosphates, nitrates, kainit, cotton seed and fine compost **A Sample for trial** on **long time.** Pays for itself in a few days in rentals from neighbors

KING WEEDER COMPANY, Richmond, Va.

Intense and Fadeless

Simpson-Eddystone

Solid Black Prints

have been the recognized standard black since 1842.

The rich lustrous black of this calico is inseparable from the cloth. The color is tub-proof, sun-proof and perspiration-proof. Cloth of the first quality, well-woven and durable.

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philadelphia
Established by Wm. Simpson, Sr.

Among the Flowers.

If you would have the finest annuals, study the seed catalogues now, before spring work presses, and order the seeds early to guard against having to wait for the end of the rush, with perhaps the reward that some popular kind is exhausted.

Buy your seeds always of a reliable firm, even if the first cost is a little more. Cheap seeds are exasperating—dear at any price—for even if they do grow, the vitality is impaired or the strain a poor one. Better a single packet of first-class seed than a dozen of poor quality. In fact, it is easier to produce a fine effect with only a few varieties than to attempt the growth of many kinds. There will be a clash in color and lack of harmony in manner of growth, no matter how carefully one may try to avoid it.

No single annual is more beautiful for cutting than the sweet pea, though its growth in the front yard can scarcely be recommended. Better give it a place in the garden or as a screen between the front and back yard.

Plant the seeds very early. If you wait until the ground is dry and in good condition, you will certainly rue it. Plant them as soon as you can get them into the soil. March is none too early in latitudes where they plant corn the middle of May.

Give them a deep, rich soil; a nice loam well enriched with decayed stable manure serves the purpose nicely. Make a trench six inches deep and plant the seeds an inch apart in zigzag line, pressing the soil well over the seeds. After the plants are several inches high the trench should be gradually filled. This provides deep rooting and plants thus grown do not so readily succumb to drouth.

Provide supports, either when the seeds are planted or before the trench is filled. They will be much firmer than if not put in until the ground has become hard. Brush will serve the purpose, though poultry netting is much more sightly.

In selecting seeds there is a temptation to choose a mixed packet in order to get several varieties for the same money; yet the mixed strains are never quite so choice as the best-named varieties. Blanche Ferry, the old pink and white variety in a perfected form; Dorothy Eckford, pure white; and Lady Grisel Hamilton, a magnificent lavender, will be sure to please. Keep the flowers well gathered and do not allow seeds to mature. If you water in midsummer, do it thoroughly. Surface watering is worse than none at all, as it induces the rootlets to come to the surface, where they are more readily affected by the sun's heat.

For late summer the aster is without a peer, some varieties being almost as large and beautiful as the chrysanthemum. Many prefer to start the seeds in boxes in the house, transplanting as soon as the weather is warm; but good results come, though later, by sowing the seed in the open ground. The great difficulty is too close planting. The plants branch extensively, and must have room in order to do their best. Eighteen inches apart is best for most varieties.

There are many divisions of the genus, but the Late Branching are among the most popular sorts, resembling a chrysanthemum in form and size. The best colors are white, lavender and pink, and a union of the three may be made with good taste.

Whatever the annuals chosen, make them the best of their kind. These summer bloomers may be a continual joy, or quite the reverse. After the plants are well grown, they must be continually shorn of old flowers. Blossoms teach generosity; give if you would have them continue to bloom for you.—Bessie L. Putnam.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 4592 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

Sheep and Swine.

"Dorset sheep were introduced into the United States in 1887, and on March 31, 1891, the Dorset Horn Sheep Breeders' Association of America was organized at Pittsburg, Pennsylvania, with thirty-one members. At the end of the first year the association had a membership of sixty-nine, with total receipts of $900.75 and expenditures of $284.74. To-day the membership numbers 241, with 11,876 certificates issued."—Dorset Bulletin.

Russia is now endeavoring to increase sheep production. They expect to increase the 60,000,000 they now have to 300,000,000 head. Formerly Russia was of much greater importance as a sheep-raising country than now, but they did not have sheep that grew much wool.

SEED CORN PREMIUMS.

OFFERED BY THE NATIONAL FARMER AND STOCK GROWER, THE BEST MONTHLY FARM PAPER IN THE UNITED STATES.

The National Farmer and Stock Grower, published monthly at St. Louis, Mo., subscription price 50 cents a year, is largely responsible for the great improvement in corn-growing methods, especially in the Middle and Southern States, where the crops have so largely increased. This is done by furnishing subscribers small quantities of selected seed corn grown by champion corn growers as subscription premiums and offering additional prizes when the corn grown from the premium seed receive awards at the State, Interstate and National Fairs and Expositions. This process is still going on, and during the year 1911 the usual and better offers are made.

OUR SEED CORN FOR THE YEAR 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana.

We have also contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

WHAT A SCHOOL BOY DID IN GEORGIA.

In the spring of the year 1909, Louie Brown, a school boy at Belmont Farm, Smyrna, Ga., received a pound of L. B. Clore's Johnson County White Corn as a subscription premium with The National Farmer and Stock Grower. With this seed in the same year he raised a good stand of corn and won a $50 first prize at the Georgia State Fair, besides winning a $25 first prize from The National Farmer and Stock Grower.

SECOND PRIZE AT THE TEXAS STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished to W. L. Norman, of Kingston, Tex., two pounds of Johnson County White Corn, grown by the famous champion corn grower, L. B. Clore, of Indiana. With this seed Mr. Norman raised about twelve bushels of corn, and with ten ears of it he won the second prize at the Texas State Fair.

WON PREMIUMS AT THE TENNESSEE STATE FAIR TWO YEARS.

In the spring of 1909, The National Farmer and Stock Grower furnished Mr. J. M. Gresham, of Rural Route No. 2, Smyrna, Tenn., a half-pound package of Yellow Dent Seed Corn, grown by Mr. D. L. Pascal, the famous corn champion of Iowa. This corn being sown and harvested, he selected a ten-ear lot from the yield, and by exhibiting it at the Tennessee State Fair he won the second prize in class for Yellow Dent Corn. Mr. Gresham also won a third prize at the Tennessee State Fair of 1910 with his Yellow Dent Corn.

WON ILLINOIS COUNTY FAIR PRIZES.

Two pounds of Johnson County White Corn, grown by Mr. L. B. Clore, of Franklin, Ind., was furnished by The National Farmer and Stock Grower to J. T. Boyd, of Rardin, Coles county, Ill. This was in the spring of 1910. From this seed corn he grew the ten ears that won first prize at the Coles County Fair and the sweepstakes prize for the best ten ears on exhibit.

WON A FRISCO SCHOLARSHIP.

In the spring of 1910, The National Farmer and Stock Grower furnished James A. Partney, of Chilton, Carter county, Mo., one pound of Johnson County White Corn, grown by Mr. L. B. Clore, of Indiana. From this pound of corn he produced a good yield, from which he selected ten ears that in the Corn Contest of Carter county, Missouri, won a Frisco scholarship, valued at $100, at the Missouri Agricultural College.

CHAMPIONSHIP PRIZE IN LOUISIANA.

Two pounds of Johnson County White Corn, grown by L. B. Clore, of Indiana, were furnished as a subscription premium by The National Farmer and Stock Grower to I. L. Haile, of Linville, La. This was in the spring of 1910. With this seed corn Mr. Haile produced a nice crop and exhibited ten ears selected therefrom and won first prize in class for White Dent Corn and the championship prize for Best Ten Ears exhibited at the show. This was at the Louisiana State Fair. He won $150 in all with ten ears of corn.

SECOND PRIZE AT THE MISSOURI STATE FAIR.

In the spring of 1910, The National Farmer and Stock Grower furnished Clark Reibel, of Arbela, Scotland county, Mo., one pound of L. B. Clore's Johnson County White Corn. With this corn he produced ten selected ears that won second prize in class at the Missouri State Fair of 1910.

WON SEVERAL KENTUCKY PRIZES.

In April, 1909, Mr. Hiliary Downs, of Hunter's Depot, Ky., received one single pound of Pascal's Yellow Dent Seed Corn from The National Farmer and Stock Grower as a subscription premium. In that year he did not win a prize, but in 1910, from his own seed grown from seed furnished him the year before, he produced ears that won the first prize and sweepstakes at the County Fair. He also won second prize at the State Fair.

OUR PREMIUM OFFERS.

Anyone who will send us 60 Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

THE PREMIUMS WE WILL PAY.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States, also at District Fairs.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

ORDER BLANK—SIGN AND SUBSCRIBE EARLY AND MAKE SURE.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.: Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me.....pound.. of Clore's White Corn and ..... pound.. of Pascal's Yellow Corn as a premium.

SELECTED POETRY.

INTERNATIONAL PEACE.

Two empires by the sea,
Two nations great and free,
One anthem raise.
One race of ancient fame,
One tongue, one faith, we claim,
One God, whose glorious name
We love and praise.

What deeds our fathers wrought,
What battles we have fought,
Let fame record.
Now vengeful passion, cease;
Come victories of peace;
Nor hate, nor pride's caprice,
Unsheath the sword.

Though deep the sea, and wide,
Twixt realm and realm, its tide
Binds strand to strand.
So be the gulf between
Gray coasts and islands green
With bonds of peace serene
And friendship spanned.

Now may the God above
Guard the dear land we love,
Both East and West.
Let love more fervent glow,
As peaceful ages go,
And strength yet stronger grow,
Blessing and blest.
—Prof. Geo. Huntington.

TO BED UNWASHED.

His little hands are folded now
And peace is in his breast:
There where a curl lies on his brow
His mother's lips were pressed.

'Twas but a little while ago
That he so gladly played,
And was it I that fretted so
About the noise he made?

How calmly, peacefully he lies,
Not knowing I am near!
The lids are closed upon his eyes,
My sighs he does not hear.

His little hands, alas, alack!
Lie on the spotless spread,
And, oh, but they are soiled and black!—
He went unwashed to bed.
—Chicago Record-Herald.

THE WISE BROTHER.

Never think dat Springtime is comin' on de run
Till I hear dat Mister Melon is feelin' fer de sun.

Till de sleepin' seed des crack de ground,
An' de larks is lively, flyin' roun'.

I min' no blizzard talkin'—no matter what he say;
He des de bigges' blowhard dat ever come my way!

De larks know mo' about de weather
Than all dem blizzards put together!
—Atlanta Constitution.

ADVICE TO OTHERS.

Smile—smile—smile, all the while,
And soon you will daily wear it!
Grin—grin—whate'er you are in
And then you'll the better bear it.

Hope—hope—to the end of your rope,
Then struggle that rope to sever;
Mope, mope, and you'll find good scope
To follow the trade forever.

Toil—toil—your share of the spoil
Will come, some way or other;
Maybe in wealth, and maybe in health,
And maybe the love of your brother.

Give—give—'tis the way to live,
If good, sound sense can guide it;
Save—save—and not for the grave;
But what you may need this side it.

Fight—fight—with all your might,
Whenever the facts demand it;
Cease—cease—brings cargoes of peace
From victory, when you land it.

Think—think—like one on the brink
Of something too grave for laughter,
Well—well—of the heaven or hell
That follows us here and hereafter.

Trust—trust—as indeed you must,
God in his varied dealings;
Wounds He will give that your soul may live,
And then—attend to the healing.
—Will Carleton, in Everywhere.

LONDON.

For me no dark, deserted lane
With muddy footprints, leafless banks,
But shops that shine the more for rain,
The friendlier flashing window pane,
And watchful cabs in glittering ranks.
These country lamps burn thick and brown
Beside the lights of London Town.

That heavy, golden plume flung high
As though to challenge peering stars;
The whisk of light where "taxi" fly,
And grave Big Ben against the sky;
The moving lines of brilliant cars;
The great lifts moaning up and down—
All these are ours in London Town.

Like captured moons the pale arcs flare,
Flicker a moment, dim and blaze;
Above each quiet, somber square,
Through evening wind, on morning air
The distant drone of traffic strays;
Let other cities smile or frown,
Their magic fades by London Town.

No other voice our souls can fret
With such desire when memory calls;
The empire circle widens, yet
Its further bounds are swayed and set
Here, where the flying message falls,
And all that empire's fair renown
Beats in the heart of London Town.
—From the Spectator.

THE SONG OF LIFE.

I'll sing ye a song, O ye people forlorn,
A song from the heart of the world;
'Twas there when the first tender ripple was born,
The first wave of thought was uncurled!

Its rhythm is known to the spheres very well;
'Tis song by The Wonderful Seven;
It reaches the nethermost confines of hell,
And lifts to the uppermost heaven.

The name of the song is called Love, and, my dears,
It comes from The Absolute Source;
So put by your troubles, your doubts and your fears,
And lay by your griefs and remorse.

For Love is beginning, fulfillment and home;
The source of all wisdom and power;
It lights up the star in the infinite dome,
And breathes thro' the breath of the flower.

O people beloved, attune to the song!
'Twill give you your highest, your best,
And hard, heavy burdens you've carried so long,
Will fall from you, leaving you blest.
—Elsenore See Inslee, in the Nautilus.

Bothers or Helpers.

"Children are such bothers!" groaned Mrs. C.

"I call mine my helpers!" laughed Mrs. J.

And "bothers" Mrs. C.'s children were, not only to the mother, but to everyone else with whom they came in contact. Mrs. C. had done her best towards spoiling them by waiting upon them and pampering them. They were pert little nuisances without a particle of self-reliance and had not the ingenuity to think up amusements for themselves.

And just as truly might Mrs. J.'s children be termed helpers. From getting-up time, when they took turns buttoning one another up, till bedtime, when they again took turns in unbuttoning, the children were busy and happy. They had no time to bother. For as soon as a child could do anything he was assigned some regular part in the household routine for which he was held responsible. Ten-year-old Bessie had breakfast dishes to do and the plants to water; eight-year-old Johnnie had the rugs to beat and the back porch to clean; and five-year-old Maud was responsible for the breakfast of Towser and Kitty and for the filling up of their drinking vessels.

It was not so much the actual work that the children accomplished that Mrs. J. had in mind as it was the idea of teaching the children that they had a definite place to fill in the world which no one else could fill for them.
—Janet Thomas Van Osdel.

The Cabman's Answer.

Lord Decies, the fiance of Miss Vivian Gould, talked to a reporter during the recent Horse Show about the inexcusable dearness of New York's cab service.

"And these dear turnouts," said Lord Decies, "are none too luxurious. I said to a cabby the other day:

"'How much to take me to the Hotel Gotham?'

"'Four dollars,' the man answered.

"'Oh,' I said, 'I didn't ask the price of the rig. I don't want to buy it.'

"'Well, I should think not,' said the cabby. 'The horse alone cost $4.50.'"

Following the Sun or Shade.

"A good turkey dinner and mince pie," said Simeon Ford, the New York raconteur, "always puts us in a lethargic mood—makes us feel, in fact, like the natives of Nola Chucky.

"In Nola Chucky one day I said to a man:

"'What is the principal occupation of this town?'

"'Wal, boss,' the man answered, yawning, 'in winter they mostly sets on the east side of the house and follers the sun around to the west, and in summer they sets on the west side and follers the shade around to the east.'"

Familiar Sayings Newly Applied.

"I don't like your weigh," remarked the customer to the dishonest grocer.

"I hope I make myself clear," said the water as it passed through the filter.

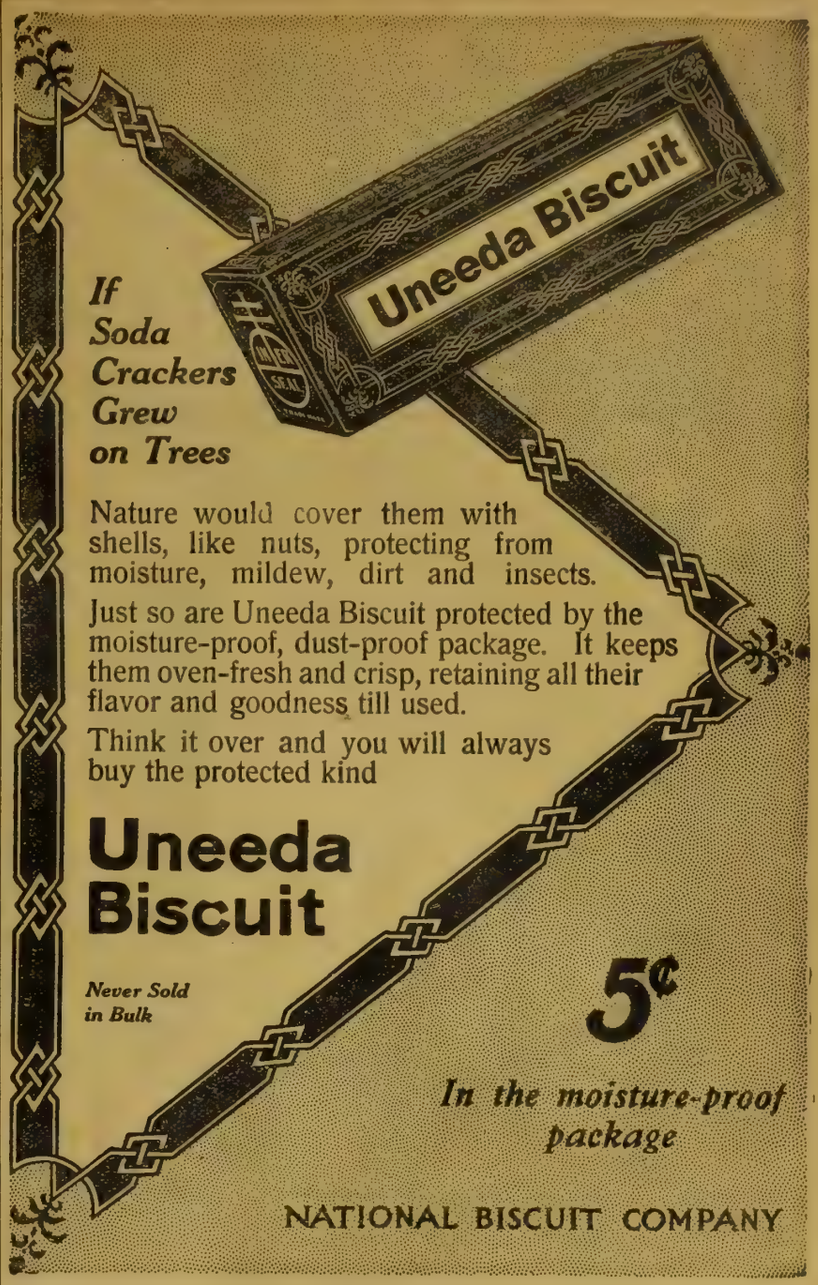
"Reading makes the full man, but writing doesn't," complained the half-starved poet.

"My resources are all tied up," said the tramp as he placed his bundle on a stick.

"The rest is silence," quoted the musician, explaining the meaning of that term to his pupil.

"This is a complete give-away," remarked Papa Santa Claus as he finished stripping the Christmas tree.

"I call that treating a friend in a rather distant manner," said the doctor as he hung up the receiver after prescribing over the telephone.
—Boston Transcript.



Uneeda Biscuit
If Soda Crackers Grew on Trees
Nature would cover them with shells, like nuts, protecting from moisture, mildew, dirt and insects.
Just so are Uneeda Biscuit protected by the moisture-proof, dust-proof package. It keeps them oven-fresh and crisp, retaining all their flavor and goodness till used.
Think it over and you will always buy the protected kind

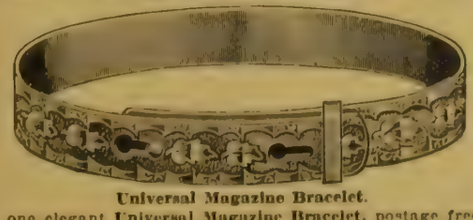
The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet**, postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Universal Magazine Bracelet.

MAGNETISM

Nature's Tonic

Makes the Blood Circulate——Giving Health and Strength

WE PROVE IT TO YOU POSITIVELY

By the words of Chronic Sufferers who have been restored

This Cut Shows

as near as is possible to illustrate, how Magnetism is radiated from our powerful magnetic Vest, which keeps the body constantly saturated and bathed in a powerful field of magnetic force which gives new life to the blood and nerves, making the blood circulate with greater force and vigor, thus helping Nature in her work of building up and strengthening the system, relieving congestion, soreness and pain after all other methods of treatment have failed in many cases.

Think of Living

inside of a garment that is radiating hundreds o streams of Magnetic force into your body, passing through and through, reaching the deepest nerves and organs, giving them new life force to enable them t perform their functions more vigorously and thoroughly. This is what our Magnetic Shields accomplish. They are made for all parts of the body, and are guaranteed to hold their power.

WE ASK YOU TO INVESTIGATE OUR CLAIMS FOR MAGNETISM

This costs you nothing, and it is a duty you owe to yourself if you are sick, weak or debilitated in any way. We want to help you in making this investigation complete. Do not put it off but do it now. **Send to-day for our free advice and proof.** By doing it now it may save you many dollars and much suffering in the future. The time to treat weak or debilitated conditions is at once before they develop into serious proportions, for Nature has already given the warning signal. Our experience and knowledge gained during nearly 30 years of study and application of Magnetism, is at your service free of charge at all times, if you will simply write us.

Our Book "A Plain Road To Health" FREE

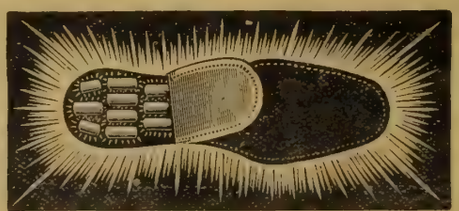
to all who send us a description of their cases. It describes all of our Shields, and tells all about Magnetism, and how to apply it to obtain best results as a curative agent, and also gives much other valuable information upon the subject that can be obtained from no other source. **Write us fully and we will advise you honestly, and to the best of our ability. Then you are to be your own judge** as to whether or not you wish to apply Magnetism and give Nature a chance to right the wrong conditions in your case the same as it has in many others.

Positive Proof on Your Own Body

If You Must See With Your Own Eyes, and Must Have Proof on Your Own Body Before You Can Believe

Try Some of Our Smaller Shields——They Will Convince You

WARM



FEET

The greatest comfort and luxury of modern days. Magnetic fire under your feet. The greatest life protector known. Your feet keep warm all the time, even if standing in water, snow and ice. If you cannot believe the wonderful curative power of Magnetism, try a pair of these FOOT BATTERIES on your own body. They will convince you beyond a doubt that Magnetism makes the blood circulate.

They are good for Rheumatism, Cold Feet, Cramps, poor circulation in the extremities, and all forms of weaknesses in the feet and limbs. They insulate the body against the cold, damp earth, and are worth their weight in gold to any sufferer. Get a pair today. They are worn comfortably in any shoes. The Single Power are $1.00 a pair, or three pairs for $2.00. The Double, or Compound Power, are $2.00 a pair, or three pairs for $4.00, postage paid. Send size of shoe when ordering FOOT BATTERIES. Send a description of your case for free advice and much valuable information on the subject of magnetism.

CORN IMPROVEMENT SPECIALISTS—Clarke Reibel and his sisters with prize corn and prize ribbons. Clarke Reibel, of Arbela, Mo., won two prizes at State Exhibits and two prizes from The National Farmer and Stock Grower with corn grown from seed furnished him in 1910 as a subscription premium by this publication.

Won Five Corn Prizes.

In the spring of 1910 The National Farmer and Stock Grower received a dollar from Clarke Reibel, of Arbela, Scotland county, Mo. We credited him with a subscription for two years and sent him one pound of L. B. Clore's Johnson County White Corn and one pound of D. L. Pascal's Reid's Yellow Dent Corn.

With the Johnson White Corn he raised some very fine ears, and ten of them were good enough to win the second prize in class at the Missouri State Fair of 1910. These same ten ears of Johnson County White Corn also won a ninth prize at the State Corn Show at Columbia.

With the single pound of Reid's Yellow Dent Seed Corn he raised a good stand and exhibited ten ears at the State Corn Show at Columbia and won a third prize. He also received two prize awards from The National Farmer and Stock Grower. Thus it will be seen that from one dollar paid by him to The National Farmer and Stock Grower this young man won five prize awards with the corn that he grew from the seed furnished to him.

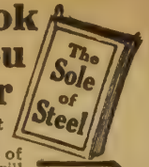
Our Rose Premiums.

Do not forget the rose plant premiums which are advertised on page 19. This is the most pleasing subscription premium ever offered by a newspaper publication. Hundreds of thousands of rose plants will bloom this year that were furnished by our publications.

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

This Free Book Will Save You $20.00 a Year



I want to tell you all about my *Celebrated Steel Shoes*—why one pair will outwear six pairs of leather shoes—how a pair will give you more foot-comfort than you ever had in your life. How they will keep your feet powder-dry all the time. How light and comfortable they are the year around.

I have told half a million others these facts. They have bought steel shoes of me and saved millions of dollars among them. More than that—they can be on their feet all day—at any work, without foot fatigue. And they have gained health protection.

Steel Shoes

H. M. RUTHSTEIN
The Steel Shoe Man.

prevent rheumatism, sciatica, lumbago, lame back and other troubles caused by wet feet. I want to show *you* the way to avoid these dangers and all such troubles as tender feet, corns, bunions, chilblains, and at the same time show you a saving of $20 a year in actual money on account of the extra wear you get from my shoes.

Will you write me a postal today and get full particulars? Let me send you this free book of mine by return mail.

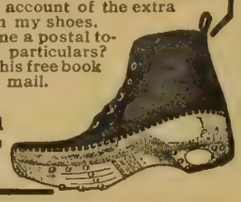
Racine, Wis.



Yearling Cattle at $7.00.

E. W. Erickson represented Alcester, S. D., on the Chicago market on February 13th with a shipment of cattle. Included were six head of Angus yearling steers and heifers which averaged 638 pounds and were sold by Clay, Robinson & Co. at $7.00. This price was 15 cents per 100 pounds higher than any other firm obtained for cattle that day.

SEED CORN PREMIUMS

Offered For the Fourth Year by The National Farmer and Stock Grower to Our Own Subscribers.

The National Farmer and Stock Grower originated the plan of corn improvement on farms by distributing small quantities of seed corn raised by champion corn growers and by offering additional awards when the corn grown therefrom wins prizes at State, Interstate and National Shows. We have originated about twenty-five thousand experimental corn breeding plots, from some of which county, state and interstate prizes have been won. The corn improvement originated by this paper has been so successful that it has contributed in no small degree towards the greatest corn crop ever grown — the crop of 1910.

Our Seed Corn For 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana. Mr. L. B. Clore has a son, Roy D. Clore, who grows his own, and with this very strain he won the grand championship prize at the National Corn Show which has just closed.

Four years ago we first contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

Our Subscription Premiums.

Anyone who will send us Sixty Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

The Premiums We Will Pay.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States, also at District Fairs.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

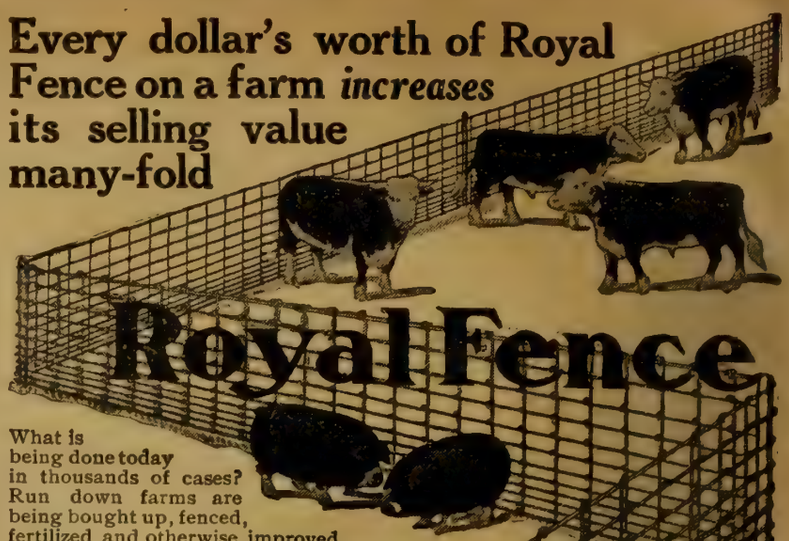
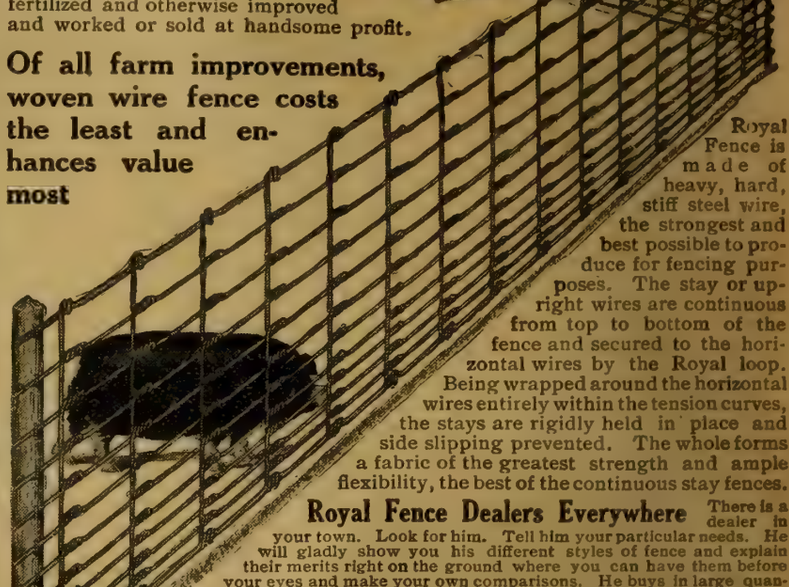
Every dollar's worth of Royal Fence on a farm *increases* its selling value many-fold



Royal Fence

What is being done today in thousands of cases? Run down farms are being bought up, fenced, fertilized and otherwise improved and worked or sold at handsome profit.

Of all farm improvements, woven wire fence costs the least and enhances value most



Royal Fence is made of heavy, hard, stiff steel wire, the strongest and best possible to produce for fencing purposes. The stay or upright wires are continuous from top to bottom of the fence and secured to the horizontal wires by the Royal loop. Being wrapped around the horizontal wires entirely within the tension curves, the stays are rigidly held in place and side slipping prevented. The whole forms a fabric of the greatest strength and ample flexibility, the best of the continuous stay fences.

Royal Fence Dealers Everywhere There is a dealer in your town. Look for him. Tell him your particular needs. He will gladly show you his different styles of fence and explain their merits right on the ground where you can have them before your eyes and make your own comparisons. He buys in large quantities, gets the lowest carload freight rates and can sell you good fence at the lowest possible price.

FRANK BAACKES, Vice-President and General Sales Agent

American Steel & Wire Company

Chicago New York Denver San Francisco

Send for copy of "Royal Fence News," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application

Iowa-fed Cattle at $6.90.

Iowa carried away the honors in the Chicago cattle trade in the middle of February. Seventy-one Hereford steers of 1,500 pounds average sold at $6.90 per 100 pounds, the top by five cents per 100 pounds, and considerably higher than any other sale of so many cattle in one lot. They were handled by Clay, Robinson & Co., and bred, fed and marketed by Westover & Gardner, of Grant, Ia.

This Galloway MANURE SPREADER

Only $39.50 F.O.B. WATERLOO

The real thing. A successful 50 bushel Spreader with more than four years of success behind it, only $39.50. This is only one of the great Galloway line. More than 40,000 farmers of America have stamped their O. K. on it. They say, "It's the Best." This is the latest from the Great Galloway factory. It's part of my 1911 capacity of 40,000 manure spreaders. It is you that gets the benefit of this tremendous output, and you save 40 to 60 per cent on your purchase because I divide the melon with you. Every page of my big free book fairly bristles with Proof

GET THIS BIG BOOK FREE

Let me quote you prices on a Galloway Spreader to suit the size of your farm. I've got the one for you. I'll trust you to try it. I'll put it all up to you; and if you say it's not what you want, I'll take it back and you don't lose one dollar by the deal. **See it work,** then you know what it is. Here's what you will find out: **It's the simplest and handiest—two horses can handle it—spreads any kind of stuff—no breakage bills—long life—satisfaction all the way—it's a money-maker every day—it pays you big profit on every crop you use it.** Now prove this out. Find out that you can make this saving. I know something about the spreader business you ought to know; let me tell you. Write me and don't put it off till tomorrow. —WM. GALLOWAY

WM. GALLOWAY CO., 1289 Galloway Sta., Waterloo, Iowa

Let Me Tell You How I Divide the Melon with You

Fertility Lost in the Washing of Soil.

Every farmer has it in his power to greatly reduce the amount of fertility annually washed out of the soil by the heavy rains. As a usual thing, the light rains do no damage of this kind.

In the soil the minute particles do not move easily, being held in place by adjacent particles. It is only when the pressure is relieved on one side that the particles are able to flow away in the current of water.

The sides of open ditches, streams and rivers are the sources of the yellow matter that colors the great rivers that rush to the ocean, carrying the vast quantities of rich soil with them.

The soil that is washed away is the best soil and the richest. It has in it least of mineral matter and most of decayed vegetable matter. Probably the deposits of the Nile river are richer than the deposits of our own rivers. Only the deposits of our rivers are not made in a place where men can cultivate them and raise wheat and other grains on them.

Egypt has for thousands of years kept up her fertility by the annual deposits of the Nile. We have a thousand Niles in the other rivers of the world, each one of which is carrying annually to the sea vast quantities of rich fertility. The decay of animal and vegetable matter results in a very fine dust that floats easily in the water, and this is the character of the soil floating in running water. By all means save it, if possible, to make food for the plants growing on the farm.

This is one reason for getting rid of the open ditches and substituting tile drains. At every heavy rain the sides of the open ditch let go of their best particles, and these float away. When this erosion has gone on for some time, the sides cave in and new sides are formed, with new surfaces of soil exposed to the action of the rain and running water.

In the tile drain little soil is moved. The water that comes from the tile drain has but a small amount of soil in it, not enough to count for much in the general waste of soil. The open ditch is a thing no longer desirable on most farms. It is merely a temporary expedient that should not be allowed to become a permanent institution on any farm.

On our individual farms the greatest loss in fertility due to washing comes in the washing that takes place on plowed land where the ground is sloping sufficiently to allow the formation of rills and miniature torrents. Then the light, rich particles float down into the gullies and brooks and leave the soil that is poorest in vegetable matter. The poverty of this washed soil is frequently seen in the long time required to make it productive, if manure be not applied to it.

Ultimately, American agricultural science should become so great and effective that our soil will not be able to escape into our rivers, and our rivers should run with clear water to the sea.

Hardy Bermuda Grass.

(By F. A. Mitchell, R. F. D. No. 5, Chandler, Oklahoma.)

There are many methods of setting hardy Berumda grass, but as yet we have never found the only best one. Very much depends upon the land and its physical condition.

If it is a rocky hillside, the best way is to scratch around among the rocks and get enough dirt to cover the rootlets, and they will grow; but don't expect very much grass from land where vegetation has never grown.

If newly-cleared timber land, a good Georgia stock with a large shovel and a cutter set to slope from the front end of the beam to the point of the shovel. This will jump over the roots digging the ground as best it can. It can easily be drawn by one horse and get among the stumps quite easily. Drop the rootlets about three feet apart, and if not covered with the plow, use the hoe. Step upon every newly-covered rootlet to firm the soil.

A flock of goats would kill the sprouts and give many times as much pasture over the old timber lot.

Should you desire to crop the land in corn or cotton, when the roots are gone, plow it up, plant the crop, cultivate as though there was no Bermuda there; after the crop is made the Bermuda will make more feed and hold the soil from washing better than crab grass or cockle burrs. This method is being practiced very successfully; a lot of Bermuda grass in our fields is far better than having them wash away. Don't be afraid of Bermuda. It won't hurt you and will help your land and make dollars for you.

Another good way of setting it is to drop it in every third furrow as you plow over the ground. Then come to us and we will write an obituary over the entire weed clan, as they will be dead.

Another good way is to plant the rootlets along the corn rows and cover them as you cultivate. If you have listed corn, this will be fine.

Another method, drop rootlets in cotton middles and cover. The next year it will occupy the land.

Another method, leave vacant every fifth row of cotton. Set Bermuda there. The next year plant to corn and cultivate crosswise. This method will distribute the roots and after the corn crop is made the Bermuda will make a good sod.

The best method for us is the one we used last spring. Secure the rootlets and have them in wagon boxes in the field. Have them well moistened the night before. Keep them wet and set them only during a wet spell.

With one team list the ground; three men will drop the rootlets in the lister furrow, another team covering with a disc cultivator. If everybody will work but father, the land well be set to Bermuda for about one dollar an acre.

A surer way is to cover with a hoe, leaving a small portion of the rootlet exposed; this will admit air and sunshine to the rootlets and nearly everyone will grow. Covering with a disc cultivator is a much easier and cheaper way, and for us the better of the two.

Last spring we set twelve acres in this way. It was down in the moist ground and grew despite the dry weather. By August the ground was covered. Upon it we pastured 100 head of hogs, nine horses and two cows all the fall. When the foliage was not grazed too closely, there are green twigs even in January.

No use to try to make your first start within range of the chickens, as they love it dearly and will eat every twig of it. Commence away from the house and work up to it if you have chickens. It is the finest chicken grass we ever grew.

We plant it upon prairie sod by following every fourth furrow and thrusting a spoke clear through the sod insert a rootlet, step upon it to firm the soil and pass on.

Next spring we will try another method, as we purpose to set fifty acres.

Load the freshly-plowed Bermuda sods upon a manure spreader, drive around a land in the field, distribute about four tons per acre. Follow at once with another team and sulky plow, so the furrow slice may not be too thick. Plow them under. Harrow to smooth the ground, cultivate with a harrow to keep weeds down and soil mellow and see the Bermuda grow. We think two men and teams will set three or four acres per day.

It is always better to leave the dirt upon the roots, but it costs more to plant them that way.

Wheat, Oats and Barley Prizes.

At the National Corn Show the national sweepstakes winners for grain other than corn were as follows: Peck of white oats—A.D.Van Sickle, Warren, Minn. Reserve—Chisholm Bros., Del Norte, Colo. Peck black oats—E. E. Newton, Monte Vista, Colo. Reserve—C. A. Swindell, Ryan, Iowa. Peck soft wheat—A.M. Shay, Greeley, Colo. Reserve—William Borst, Ackerland, Kas. Peck hard wheat—A. D. Van Sickle, Warren, Minn. Reserve—Fred McCulloch, Belle Plaine, Iowa. Peck six-rowed barley—H.E.Kreuger, Beaver Dawn, Wis. Peck two-rowed barley—W. D. Stelk, Phillips, Neb. Reserve—A. D. Van Sickle, Warren, Minn. The grand championship awards were as follows: Peck wheat, any variety—A. D. Van Sickle, Warren,Minn. Reserve—Norman Cherry, of Davis, Saskatchewan, Canada. Peck oats, any variety—J. C. Hill & Sons, Lloydminster, Sask., Canada. Reserve—A. D. Van Sickle, Warren, Minn. Peck barley—W. D. Stelk, Phillips, Neb. Reserve—A. D. Van Sickle, Warren, Minn. Peck six-rowed barley—H. E. Kreuger, Beaver Dam, Wis. Peck Oderbrucker barley—H. E. Kreuger, Beaver Dam, Wis.

The five winners from South Carolina in the corn contest at the National Corn Show were Jake Williams, of Manning, first prize; Jerry H. Moore, of Winona, second; Harry C. Brearly, of St. Charles, third; Willie Johnson of Greer, fourth, and Mark Smith, of Darlington, fifth. They all exhibited White Dent Corn.

"You May Send Me My 'NATIONAL' Style Book"

That is the message we are waiting for from *you,* that we may send you free *your* "NATIONAL" Style Book. That is what *your* book is waiting for—only a word of welcome and your name and address.

Copyright, 1911, by National Cloak and Suit Co.

What this "NATIONAL" Style Book Means to You

We have reserved one Style Book for every reader of this publication because it is the most interesting fashion book ever published—and also because we know *you* will be delighted with your copy.

It shows 224 pages of the new styles—and all are offered at "NATIONAL" prices. It illustrates and describes "NATIONAL" Tailored Suits, made to measure, $15 to $40.

You can make your selection from all the new suit models and have a suit designed, cut, made, trimmed and lined to your special order—actually and in every detail made to measure for you.

But even more than this. You have unlimited choice of over 300 materials. And now comes the wonderful part—we guarantee the finished suit to fit you and please you perfectly—we absolutely guarantee your complete satisfaction, or we will refund your money **cheerfully,** and pay express charges both ways.

In writing for your Style Book, be sure to state whether you wish samples for these "NATIONAL" Made-to-Measure Tailored Suits. Samples are sent gladly, but only when asked for.

And what shall we say of the new "NATIONAL" Waists—the most charming collection ever gathered together—and "NATIONAL" Skirts, America's best and most stylish. Let us give you a brief index of the magnificent showing of the new styles:

Waists . 98 cents to $8.98	Hats . . $1.98 to $14.98
Skirts . . $3.98 to $14.98	Misses' Wash Dresses and
Lingerie Dresses . $4.98 to $19.98	Misses' Tub Suits, $2.98 to $9.98
Wash Dresses, $3.98 to $8.98	Misses' Tailor-Made Suits,
Silk Dresses, $11.98 to $22.50	$9.98 to $17.98

In fact, nearly everything for Women, Misses and Children is beautifully illustrated in the "NATIONAL" Style Book we have reserved for you, to be sent you free if you write for it.

The "NATIONAL" Policy

The "NATIONAL" prepays expressage and postage to all parts of the world. You may return, at our expense, any "NATIONAL" garment not satisfactory to you, and we will refund your money.

The Market For Oats.

The largest oat crop ever known in this country has depressed its own market by its own quantity. A farmers' crop, although used largely on farms, there remains a surplus which the United States demand is unable to consume, except at a sacrifice to a farmer. On January 31st the Chicago Board of Trade quoted May oats at 33⅝ cents a bushel, and on February 27th the quotation for May delivery was 31 cents. Here we have thirty-two pounds of oats paying a freight bill to market and then selling at less than a cent a pound. One year previous oats were selling 16 cents a bushel higher. In our previous articles we have shown that 70 per cent. of the oat crop is consumed on the farms where it is grown. It is the surplus from Illinois and Iowa that is depressing the market. Of course, farmers have to sell something. At the present price oats are worth more on the farm than on the market.

National Show Corn Prize.

Mr. James W. Bowman, of R. F. D. Cutler, Ohio, subscribed for The National Farmer and Stock Grower in the year 1908. He received as a subscription premium one pound of D. L. Pascal's Yellow Dent Corn. With the crop he grew from this seed he has won many premiums. He first won the championships at the County Fair in 1908; the year following he won championships at two different County Shows. Then in 1910 he won championship at the County Corn Show, also a first prize at the Ohio State Corn Show and third prize at the National Corn Show which has just taken place. In February, 1910, he subscribed again and received one pound of Clore's Johnson County White Corn, and with the ten ears selected from the corn he raised he won first premium at the County Fair. Here we have a number of prizes won by the product of the small quantity of corn which was furnished him as a subscription premium. See our corn offers on page 2.

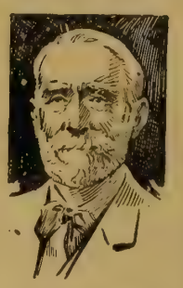
A Low-grade Fertilizer.

We notice a fertilizer on the market which, being sold at $18 per ton, contains 20 pounds nitrogen, 200 pounds phosphoric acid, 20 pounds potash and 1,760 pounds of worthless filler. It is sold in sections where the land is overloaded with phosphoric acid, consequently in such cases the only real value in the whole ton is the nitrogen and potash. Farmers should discontinue wasting their money buying such mixtures and buy the nitrogen, phosphoric acid and potash separately and do the mixing themselves, cutting out the 1,700 pounds of worthless filler and substituting their own soil. Only high-grade fertilizers that are worth buying are sold by the fertilizer manufacturers. These 1-10-1 fertilizers are not worth hauling from the depot.

Not a Square Deal.

A reciprocity agreement with Canada that would look like what is commonly called a square deal would be for Canada to admit all our products free of duty and we admit all Canadian products free of duty. We have nothing against the Canadian so-called reciprocity except the betrayal of the United States farming interests to benefit other United States interests. Farmers and stock-raising associations have been treated to a disagreeable surprise.

Get the Special Introductory Price ON RANKIN MANURE SPREADERS



DAVID RANKIN,

founder of our business. He made himself America's foremost farmer. He did it principally by using superior farm machinery. Most of his machinery was specially designed and made in his own factories, because he could not buy implements in the open market that would properly serve his needs. He increased farm profits by cutting down cost of production. He saved, what to others is waste-time and effort, and the saving made him rich.

You can now buy the same kind of farm implements that made David Rankin's great achievement possible—farm implements that are better designed, better made and give greater service than any others.

RANKIN MANURE SPREADERS are easily the leaders or all America's best makes. **Either wagon box style or complete with trucks.** The David Rankin catalog tells about the Spreader, and how it is better than others; how it will make you more money and how it is saving other farmers more than they thought any Spreader ever could.

Satisfaction Guaranteed, Money Promptly Refunded for Any Rankin Spreader Or Other Implement That Fails To Make Good in Any Way.

Be sure to send for our catalog, before you think of buying from any one. If we can save you money and give you better machines, you want to know it. If we can't do that, in your judgment, no harm can come from having our catalog. **So sit down now and write a postal card or short letter, and**

Send For Free Catalog Quoting SPECIAL WHOLESALE PRICES

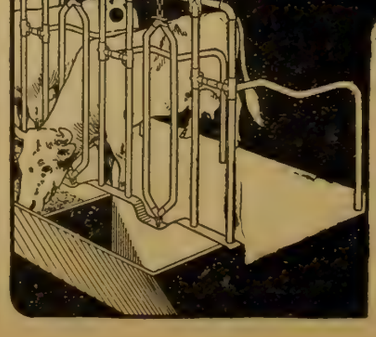
Won Several Kentucky Prizes.

In April, 1909, Mr. Hiliary Downs, of Hunter's Depot, Ky., received one single pound of Pascal's Yellow Dent Seed Corn from The National Farmer and Stock Grower as a subscription premium. In that year he did not win a prize, but in 1910, from his own seed grown from seed furnished him the year before, he producced ears that won the first prize and sweepstakes at the County Fair. He also won second prize at the State Fair. See our Seed Corn Offers an page 2.

Five-acre Poultry Farm.

Mr. T. E. Quisenberry, Secretary of the State Poultry Board, announces that the first prize in the contest for furnishing the plans of a five-acre poultry farm was won by Frank E. Mixa, of Ames, Iowa; the second by Miss Lillie S. Tidwell, of Arkansas City, Kansas; and the third by Rud H. Hicken, of Ames, Iowa. These plans will be available later on as they are published. There were two hundred contestants and fifteen prize winners.

Does the Cows a Heap of Good



Cow comfort and cow sanitation result in more cow profits, and that alone should induce any farmer or dairyman to seek these conditions. Louden Sanitary Steel Stalls and Stanchions double the light and air in a barn and insure perfect ventilation, perfect sanitation—a result impossible with any wooden equipment. Yet

LOUDEN STALLS AND STANCHIONS

are actually cheaper. **Louden** stalls of heavy tubular steel, with malleable fittings, have no flat surfaces for dust to accumulate—easy to keep clean and almost indestructible.

Louden stanchions give cows more comfort than other makes, yet keep them perfectly lined up. Throat chains prevent cows from lying down when milking. Simple and very durable. Latch easily opened or closed with gloved hand, but **can't** be opened by animal. **Send today for free catalogue** of sanitary, money-saving barn equipment.

Another Breed of Oats.

Messrs. Garton Bros., of Warrington, England, are renowned as breeders and improvers of seed grains. Their improvements in oats alone have placed them in the foremost ranks of agricultural specialists. Professors of Agriculture who have devoted their lives to agricultural advancement admit the wonderful benefits derived from the Warrington seed farm. During the past season Messrs. Garton have introduced a new breed of black oats. Victor is the name. The Victor is the largest-grained black oat and the blackest-skinned oat in cultivation. Especially suitable for early sowing, owing to its extreme hardiness. The amount of protein or flesh-forming constituents which the grain contains makes it 25 per cent. more valuable for feeding purposes than any other oats grown.

It will be remembered that a few seasons ago we offered some sample oats produced by Messrs. Garton as a subscription premium and offered some prizes at State and National Fairs and Expositions. We consider a small quantity of the Victor oats capable of reproducing itself, so that our patrons can win prizes if they will exhibit the product in any state. We therefore advise our friends and patrons to at least obtain sufficient of these black oats for experimental purposes.

Do you wish to win prizes? If so, send us a dollar for two-years' subscription to The National Farmer and Stock Grower. We will also send you two pounds of Victor oats. From this you can raise your own seed hereafter and win prizes at County, State and National Fairs. We offer the same premiums that we do for corn on page 2. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Farmers' Party.

The farmers of the United States will have to do as they do in Germany. There they have a party called Agrarians, which, being interpreted, means land-owning farmers. This is probably what we are now coming to. The National Grange, the American National Live Stock Association and the National Wool Growers' Association are of one mind in regard to the matter of protection of farmers' products by customs duties, and if they do not get together and stand together, they will most surely fall together.

Apple Sales at St. Louis.

Late in February, in St. Louis, apples were sold as follows: Ben Davis at $4.25 to $4.60 for Illinois, to $5.00 and $5.25 for fancy Virginia; Winesap at $5.75 to $6.50; Roman Beauty at $4.75 to $6.50; York Imperial at $6.25 for fancy to $6.50 for extra fancy Virginia; fancy Virginia Gano at $5.25 to $5.50; Baldwin at $4.10 for No. 2 to $5.25 for fancy. The Premium Roses.

Mrs. H. L. Miller, of Circle, Montana, writes as follows: "When my premium roses came last year it was too cold to set them out of doors, so they were planted in pasteboard breakfast food boxes and placed in an east window. When ready to set out the plants the boxes were slit at the corners and set into the ground. In this way the roots were not disturbed in setting them out."

KITSELMAN FENCE

Get It From the Factory Direct

13¼ CENTS A ROD UP

Lowest Prices Ever Quoted Direct to the Farmer on High Grade Fence.

A GOLD WATCH (10 year guarantee) for introducing our "Seed-Premium" into 10 families.

What is the Use of the Wind-break?

Wind-breaks are or are not important factors of agriculture in accordance with the part of the country in which they are grown. There was a time when the general subject of wind-breaks was given much attention in all Northern States; but now the subject is of interest mostly in certain states where climatic and wind conditions made wind-breaks essential.

It is observable that in the eastern portions of the United States but few persons are interested in wind-breaks, while in the states just east of the Rocky Mountains wind-breaks are of great importance.

It used to be thought that wind-breaks were a protection from cold; but this has long ago been a discarded theory. A wind-break is a protection from the wind but not from cold. In fact, a wind-break is often profitable as an encourager of cold in the spring, holding back the budding of the trees in its shelter till the danger of killing frosts is past.

To see the real value of the wind-break one need go to some of the Rocky Mountain States or to Saskatchewan and Alberta, in Canada. in Saskatchewan the wind blows with such persistent fury day after day that it is practically impossible to grow many of the tender fruits like raspberries and strawberries without a high wind-break for a protection. Strawberries especially have generally proved a failure there where exposed to the high winds. This may have been due to the blowing away of the pollen or to the rapidity of evaporation caused by the rush of the wind.

In all that region one sees various kinds of hedges. Even hedges of weeds are cultivated to secure this protection. One kind of weed that is very common as a hedge grows to a height of about five feet and makes a very compact hedge. As the writer remembers it, it belongs to the Amaranths. It was a wind-break very easy and inexpensive to grow and also attractive as an ornamental hedge. It served the purpose as a protector of the small fruits and garden flowers.

In the semi-arid regions of the Northwest one of the most common wind-breaks consists of poplars, which grow quickly and require little moisture. They also grow straight up, and so a large number of trees can be grown in a small space. They are used for the protection of the higher growing farm plants and even for some of the wheat fields.

The modifying of the winds is a great thing for the Western farmer. But these trees do more than modify the winds. A really thick wind-break will force the current of wind upward till it passes over the tops of the trees. This is a great boon to the apple grower in the fall, for if his orchard is in the lee of a wind-break he need have no fear of some September gale bringing down his apples. The writer has in mind one large orchard that went through a severe gale but lost few apples because the wind was forced up by a thick wind-break, while in other orchards the ground was covered with the fallen fruit.

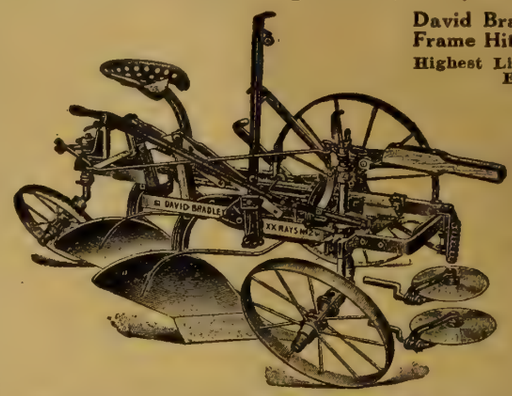
Reports From Slaughter Houses.

The United States Census Bureau received reports from 26,424 slaughter houses in the United States, which reported the slaughter in one year of 36,443,000 hogs, 12,337,000 beeves, 5,395,000 calves, 14,067,000 sheep and lambs, 135,000 goats and 25,000 kids. The number of cattle hides available for manufacture of leather, including some fallen hides, was 12,491,000. This is probably the first time that so close account of hides has been made. The total number of hides and skins of all kinds is placed at 32,371,300. In addition thereto there are hides and skins obtained from farms and ranges.

DAVID BRADLEY

WHEN you buy David Bradley plows you don't pay for the Bradley factory's eighty years' experience in making plows for every kind of soil in every state. That experience is worth a lot to you, but you get it for nothing. No matter where you farm, or in what kind of soil, you'll find in the Bradley line a plow expressly designed and built to meet your requirements.

¶Our purchase of the great David Bradley plant has revolutionized prices on these famous farm tools. The Bradley reputation for *quality* and our celebrated money back guarantee are invincible arguments to any farmer.



David Bradley XX-Rays Frame Hitch Gang Plow, $47.50
Highest Lift, Lightest Draft, Most Easily Handled.

High, heavy, dust-proof wheels, with Bradley patent hubs; 9 inches wearing space on all axles.

Simple and effective foot lift; any boy who can handle a team can do the work of a grown up man and do it as easily. High lift; point of share raises 6 inches from ground.

Frame of heavy high quality steel, strongly braced. Cannot spring out of shape, even in hardest ground. No friction on plow bottoms. Frame and bottoms carried on the wheels, not frame and wheels carried on the bottoms as you find in other plows.

Unequaled for side hill work, because pole and both furrow wheels can be adjusted from the seat by a lever on pole plate while team is in motion.

Best plow for stony land; when it encounters a stone of any size, plow bottoms will raise over it without damage and re-enter the ground immediately. Unnecessary to lock bottoms in ground; suction holds them there.

Short hitch; plow and team coupled up close, doing away with side draft. Plow pulls easier and handles better than any other. Turns square corners either way, with bottoms in or out of ground.

Bottoms are the celebrated Garden City Clipper shapes, the most perfectly formed shapes known. All bottoms double shinned. A shape for every state in the Union. Guaranteed to scour.

This is but one of the many styles of David Bradley riding plows. We make other models; frame or beam hitch, sulky and gang plows, disc plows, wood and steel beam walking plows of every description.

¶Refer to our big General Catalog for pictures, complete descriptions and prices of David Bradley Plows, Harrows, Planters, Cultivators, etc., the farm tools backed by **eighty years of knowing how;** or send today for our Book of David Bradley Farm Implements.

We can always supply promptly any repair part for any Bradley implement, no matter when or where bought.

Kemp & Burpee Company, Syracuse, N. Y.

Thoroughly Reliable.

Superior Grain Drills are not an experiment, or something new. Thousands of the most progressive farmers in every part of the grain-growing world are using Superior Grain Drills, not only for sowing oats, wheat, rye, barley, rice, etc., but for drilling cow peas, beans, beets and all other large and small grains. Superior Drills will accurately sow any and all grains from tiny grass seeds to large bush Lima beans without cracking the seed. The Superior Drill is manufactured by The American Seeding-Machine Co., Incorporated, Springfield, Ohio, in large varieties of styles and sizes, especially to meet the conditions that confront the farmers in every locality in the grain-raising world. Write them for a Superior catalogue. No matter what your seeding conditions may be, you can get a Superior Drill that will please and satisfy you. If you desire to sow commercial fertilizer or granular lime, you can get a Superior Drill that is guaranteed to do the work right. Investigate the Superior Drill for yourself as to its choice material, strength, simplicity and the work it has done and will do. Go to your local dealer and insist on seeing the Superior. Remember that the Superior has an ironclad guarantee to do all that is claimed for it.

A Five-acre Proposition.

The Missouri State Board of Agriculture has issued a five-acre prize model farm plan which was prepared by Anton Oppermann, a market gardener of twenty-five years' experience in the vicinity of St. Louis. There are many market gardeners who have comfortable homes, who make ample money year by year to support themselves and families on five acres of ground. The success of this farm, however, is largely due to the fact that it is near to a great market, in which every vegetable, fruit and all poultry can be sold at wholesale or retail from the producer to the consumer without paying railroad freight bills.

This plan, however, is a very fine example of what a five-acre home garden, orchard and poultry plant may be.

Every farm in the United States has five acres which can be adjusted more or less to the ideas of this farm. The plan is accompanied by a description of vegetable garden, hotbeds, large and small fruits, barn, poultry yards, pig-pens, with a complete picture of all that is on the property.

We advise our readers to obtain a copy from Mr. T. C. Wilson, Secretary of the State Board of Agriculture, Columbia, Mo. Just write for monthly bulletin containing first-prize farm plan.

Argentine Beef in Austria.

According to report by Consul-General Denby to the United States Department of Commerce and Labor there arrived in Vienna, Austria, on January 11th, via Trieste, the seaport, a consignment of 140 tons of Argentine beef. It was marked "La Plata Cold Storage Co.," and had been shipped on the chartered steamer Wyandotte with the design to reach Vienna during the Christmas season. The meat classified as "prime" and "extra prime," the entire cargo having been found in excellent condition.

The meat was placed on the local retail market on January 12th at the following prices per kilo (2.2 pounds): Lean forequarter, 27.6 cents; fat forequarter, 26.4 cents; hind quarter, 32.4 cents; hind quarter, fine cuts, 38.6 cents. Careful instructions were given to purchasers as to handling the meat before cooking. Dealers are compelled to keep Argentine meat apart and to sell it only as such. The meat paid customs duty amounting to 6 cents per kilo. The report of the Consul-General concludes by saying:

"The trade is still hampered by its uncertain status. No facilities exist for shipment by rail in large quantities of goods requiring artificial temperature, which, however, would be supplied were the trade definitely authorized. The shipment under consideration, 140 tons, could have been easily handled on three or four refrigerator cars, but was, in fact, sent on forty-five ordinary freight cars attached to several different trains, a method practicable only in the midst of winter."

Interesting Corn Contest.

The Bowker Fertilizer Company, with headquarters at 43 Chatham street, Boston, Mass., offered a grand prize of $500 and several other prizes, amounting in all to $1,000, to farmers of the New England States. The grand prize was offered for the largest amount of food obtained from one acre in the shape of shelled corn, provided the corn is grown on Bowker's Stockbridge Corn Manure. This fertilizer contains of ammonia 4 per cent.; available phosphoric acid, 10 per cent.; and potash, 7 per cent.

The grand prize of the 1910 contest was awarded to Perley E. Davis, of Granby, Mass. His yield at harvest time was 127 bushels flint corn, containing 43 per cent. of water and cob, which being reduced to 12 per cent. moisture, the average in crib-dry corn, gave a yield of 103.23 bushels per acre. The acre crop contained 4,934 pounds of actual food (protein, fat, sugar, etc.), a new record, it is stated, on a scientific basis.

The next prize for flint corn was won by Arthur T. Hathaway, of Monmouth, Me., whose 106 harvested bushels, 36.71 per cent. cob and water, was reduced to 95.78 bushels of crib-dry corn.

The first prize for Dent corn was won by Butler Bros., of Montello, Mass. They harvested 132.9 bushels of White Dent corn, with 54.21 per cent. water and cob, leaving 86.46 bushels of crib-dry corn.

Five of the crops of flint corn exceeded the best yield of Dent corn on the basis of the crib-dry corn containing 12 per cent. of moisture. In field bushels at harvest time the yields of flint corn ranged from 64.2 to 141.2 bushels, and the Dent corn yields ranged from 84.9 to 132.0 bushels.

Messrs. Bowker have issued a pamphlet entitled "Book of the Bowker Corn Contest," which explains how the contest was conducted; how the contestants planted and cultivated; how the judges awarded the prizes; how much corn shrinks from harvest measure; why flint corn won over Dent, etc. It also contains rules and regulations for the 1911 contest. We believe the Bowker Fertilizer Company, 43 Chatham street, Boston, Mass., will send a copy of The Book of the Bowker Corn Contest to any of our readers who may ask for it.

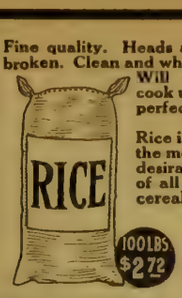
Better Farming
A John Deere Book
—Just Out
A Farmer Can Get It Free

THIS valuable book has eighteen articles on live farm topics, written by the highest authorities. Get the book and a full description of John Deere Plows and Cultivators. They are the implements of *quality*, made for farmers who want the best. We will send the book and catalogue of John Deere goods if you write for

Package No. 7.

Mention the package number *sure*, then you will get exactly the right stuff.

DEERE & COMPANY, MOLINE, ILL.



Fine quality. Heads are broken. Clean and white. Will cook up perfectly

Rice is the most desirable of all cereals

10 LBS. $2.55

Fresh Roasted Golden Rio Coffee

20 LBS. $1.25

20 lbs. Genuine Lake Superior Herring. New catch. Finest quality. Have heads off and backs split

1000 Grocery stores all in one

This is startling, but it's true. Multiply your corner grocery by one thousand. We mean this literally. Multiply every can of peas, every pound of sugar, every ounce of spices, every pound of coffee or tea, every bar of soap the average grocer carries by 1000. Then you will have some faint idea of the size of this—the biggest grocery store in all the world—**one thousand grocery stores in one.**

And why the biggest? Simply because prices are lower, values bigger, and qualities higher than can be secured anywhere else. That is why the house of Ward has grown to its present size. That is why 3000 clerks are kept busily at work filling orders—why 400 packers are at work from morning till night boxing and marking out-going shipments. That is why 3,000,000 people have shopped in this big store during the past year.

Big Bargains and Square Dealing Have Built Up the Biggest Grocery Store in the World

Your neighbors have quit the corner grocery. Your neighbors are saving money—not a few pennies, but many dollars each month—a tidy worth-while sum each year.

Do not think they are losing anything in quality. They most surely are not. They are gaining. They are getting better groceries for less money.

And these are things that you can easily prove. A glance at our grocery bargain list (a copy free for the asking) will prove that prices are lower—that you can save money. Then one single order will prove beyond a shadow of a doubt that the quality of everything we sell is higher than that you have been securing. If for any reason you are not satisfied with what you purchase our absolute guarantee protects you from a penny's loss. You return the goods and your money will be refunded without a day's delay.

Send Today for Book of Grocery Bargains

Don't delay—don't put it off—surely there is time to write a post card. This is too important a matter for you to neglect for you are vitally interested in cutting your cost of living—interested in increasing your savings account. And here is the one best way to do it. Ask for the Grocery List today. Address the house nearest you.

Look

Compare these prices with those you now pay

These are not exceptions, they are simply samples. Every Grocery Bargain List is cram jam full of just such values.

Special Session of Congress.

Owing to the failure of the passage of the so-called reciprocity agreement with Canada the President of the United States has called the new Congress together to meet in special session April 4th. The new Congress will pass a law, but it will not be the law which the President has submitted to them. There is yet time for farmers' associations to take a hand in shaping this legislation if they will agree upon exactly what they will approve.

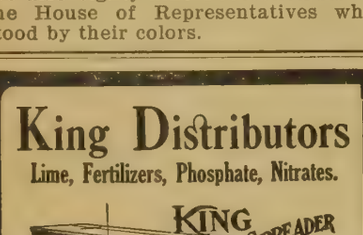
Agricultural implements, seeds and other important advertisements are indexed on the first page. Always refer to the index. It is very convenient when you get used to it.

In another column mention is made of a corn-growing contest limited to the New England States which was conducted by the Bowker Fertilizer Company. We hope our patrons will find and read it.

Quite a number of members of Congress were elected because they were supposed to be in favor of protection for American interests, and seventy-nine of them obtained their election under false pretenses. There are also eighty-nine Protectionists in the House of Representatives who stood by their colors.

King Distributors

Lime, Fertilizers, Phosphate, Nitrates.



Use One Six Months Then Pay For It.

Cheapest and Best Spreader Made. What it does.

Broadcasts Lime, Fertilizers, Phosphates, Nitrates, Ashes, Cotton Seed and Meal, in any quantity.

Distributing on both sides of the list covering two rows at a time. This is the proper way to apply the bulk of the plant food. Distributing in the open furrows in wide streams, covering two rows at a time—better than applying it in a narrow stream.

Terms to suit all. Use it 6 months then pay

Earn a free sample by doing us a little favor. A Sample in your hands will sell others and so we offer big introductory inducements.

KING WEEDER CO., RICHMOND, VA.

The National Breeders' and Feeders' Show will be held at the Coliseum, Fort Worth, Texas, March 13th to 18th, 1911. There will be 6,000 entries this year. It is a good time to visit Texas.

Farmers as good citizens should be good voters and patriots; but farmers as political factors have had very little to say. They have been rushed into politics against their will. It is time for farmers to get together and agree that they will not stand for any laws that discriminate against the agricultural interests.

It is important that the farmer shall obtain a price for his products that will pay for the cost of production; and it will soon be equally as important for the farmer to organize all selling agencies, that the consumers will not have to pay two and three times what the farmer receives in the first place. There are too many people fattening on farmers' products who do not raise or buy them.

Farmers are beginning to find that the hand of every man is against them. City people have money for luxuries, but they go to the Legislature and ask the price of food to be reduced by law.

Reciprocity with Canada would be understood if it was intended to put all the bars down, coming and going; but the kind of reciprocity which admits farm products free of duty and protects all other interests looks like sacrificing the farmers' interest for no good purpose.

The reciprocity treaty is the entering wedge for free admission of farm products from all nations. The thick end of the wedge is the protection to all other interests after sacrificing the farmer.

Early in March potatoes were selling on the St. Louis market at 46 to 49 cents a bushel.

PASSED OVER THE RIVER.

Mr. W. R. McFarlane, of Walker, Mo., died on Monday, February 20th. He was in his 64th year. He had been ill in hospital at Kansas City, and was supposed to have reached convalescence after an operation had been performed, but he relapsed and the light went out. W. R. McFarlane first became known to the writer thirty-five years ago at Fort Worth, Texas. He then brought pure-bred stock from Missouri to Texas, which constitutes the beginning of many breeding establishments. He was identified with the horse and mule trade on Broadway, St. Louis, and later on became the head of the McFarlane Horse and Mule Commission Company at the St. Louis National Stock Yards. He sold out his stock yard business two years ago to go back to agricultural pursuits. The news of his death caused great regret in the business circles in which he was so long identified. He was in life an energetic, straightforward, honest business man, ever helping someone along the pathway of life, never failing in his duty or in his friendships. His genial presence was missed when he left the market, and hundreds of his fellow-horsemen will hear of his death with sadness and with respect to the memory of a thoroughly good man.

Henry L. Newman died at El Paso, Texas, at the age of 75 years. To farmers and stockmen he was known as senior partner of the firm of Newman & Farr, at the St. Louis National Stock Yards, from 1874 to 1880, when the Stock Yards Bank was organized. Mr. Newman had ranch interests in Western Texas, with headquarters at Sweetwater, and after leaving St. Louis, was banker at El Paso until he died on February 23d.

Quanah Nocona, familiarly known as Quanah Parker, half-breed Comanche Indian, died at his home, near Lawton, Okla., on February 23d, at the age of 67. He was son of Chief Nocona, of the tribe, and Cynthia Ann Parker, a captured white girl, who was raised as a Comanche. Quanah Parker was a considerable factor in leasing lands to Texas stockmen before the Kiowa and Comanche reservation was opened to settlers. He was known to every stockman from the Gulf of Texas to the Canadian line.

10 Days FREE Trial

Freight Prepaid
Guaranteed 10 Years

Luther Grinder Co., C. J. Luther, Prest., 648 Newton St., Milwaukee, Wis.

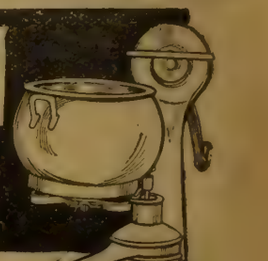
Mr. Henry Stevens, of Lacoma, N. Y., died during the month of February at 71 years of age. He was a breeder of Holstein cattle since 1876, and was President of the Holstein-Friesian Association. In later years he was afflicted with loss of sight, but he was a genial, happy gentleman, farmer and breeder to the last. His name will go down in history as one of the great improvers of Holstein-Friesian cattle.

H. L. Barnes, of Denver, Colorado, died early in February. He was 80 years of age and was the oldest live stock commission man on the Denver market.

Thos. H. Shepherd, of Pawnee, Ill., died January 31st. He was one of the old settlers of Sangamon county, Illinois, a large land holder and an old-timer in the cattle business and a man of sterling character.

Mr. I. N. Atkinson was accidentally and fatally shot at his home, eight miles east of Fowler, Ind., early in February. He was one of the foremost farmers and cattle feeders in the state of Indiana and beloved in his section for his kindliness of heart and honorable career as a citizen. He farmed 1,725 acres, and when he died six employees were pall-bearers.

The PROVEN MACHINES



You don't "guess" when you buy the **Waterloo Boy Gasoline Engine** and the **Buttercup Cream Separator.** They have *proven* themselves for years and are daily making good in actual service. They have stood the test of the hardest work which shows whether a machine is built to last. They have earned their right to leadership.

The Waterloo Boy

Has a clean record of 18 years of making good. Read what users say about it. See your neighbor's engine at work. You'll find these vital points proven: The simplest, most economical engine to run, starts easy summer or winter, develops the most power for its weight and rating, don't get out of order, and repair bills practically nothing.

The governor speed lever, patented mixer, improved igniter, open jacket and interchangeable parts are all strong features of superiority. The very best of material and expert workmanship give durability to the **Waterloo Boy.** We are putting out over one hundred engines per day, and steadily increasing our capacity.

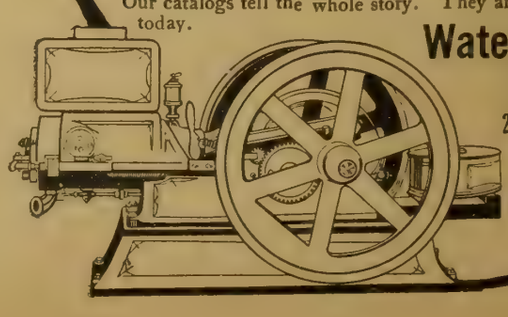
The Buttercup Cream Saparator

Skims down to 1-100th of 1% of the cream—and that's record efficiency. It is heavy, strong and simple in construction and has helical gears of phosphor-bronze, the hardest gear metal known. It will be on the job good as new, after your house tumbles down. It has a big, low, convenient bowl, runs light and is easy to clean. It is the separator **you** ought to have at the price you **want** to pay.

We back up the merits of the **Waterloo Boy** and **Buttercup Cream Separator** with square dealing—you can count on exactly what we say. We've never failed to keep our promises.

We guarantee both machines for 5 years.

Our catalogs tell the whole story. They are FREE. Write for them today.



Waterloo Gasoline Engine Co.,
228 W 3rd. Ave.,
Waterloo, Iowa.

5 YEARS GUARANTEE

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Eggs in New York.

At New York, early in March, eggs were selling as follows: Western gathered, white, 21 to 25c.; extras, 19 to 20c.; firsts, 17 to 18c.; seconds, 16 to 17c.; thirds, 15c.; dirties, No. 1, 15 to 16c.; No. 2, 14c.; checks, 13 to 14c.; refrigerators, firsts, 15c.; seconds, 14 to 14½c.; thirds and poorer, per case, $2.50 to $4.00.

Early in March, at St. Louis, New York cabbage was selling at $11 to $13 per ton.

Rutabaga turnips, in sacks, were selling at 37 to 39 cents a bushel at St. Louis on March 1st.

Sold on Nine Months Time!

That Shows our Faith.

The KING WEEDING-MACHINE

38,000 in Use. Pat.

A MACHINE NOT A DRAG.

The only weeder for **Cotton**—the **best** for **all crops.** It is always under positive control, cutting deep or shallow, light or heavy, changing from one to the other instantly, as **directed** by the **boy** driver who **considers it play.** The **King,** unlike the old drag weeder that collects trash, drags out plants and is so difficult to handle, is a **weeding machine** that glides easily and smoothly, striking light or heavy as desired—the teeth may be thrown a foot high and held without a particle of strain on the driver.

AGENTS MAY SECURE SAMPLES AT NO MONEY COST.

Thos. Thompson, says: "I credit your weeder with 8 **bales of cotton** this year."

W. N. Pittman, says: "I wouldn't take $50.00 for it. I worked my entire crop with it."

L. C. Cooke, says: "Paid for itself twice in corn alone. Made me two extra bales of cotton."

Chas. Johnson, says: "My little girl ran the machine over my Crop and made me 3 extra bales."

Jesse Williams, says: "I wouldn't take $50 00 for my King Weeder and do without it."

More than two thousand other proofs on file.

THE KING DISTRIBUTOR.

Puts out fertilizers—**in drills,** two rows at a time, or on both sides of **two lists,** or on both sides of two rows of the growing crop—it broadcasts any quantity of fertilizer, phosphates, nitrates, kainit, cotton seed and fine compost. **A Sample for trial** on **long time.** Pays for itself in a few days in rentals from neighbors

KING WEEDER COMPANY, Richmond, Va.

Special Lot of Drafters.

The Chicago Daily Live Stock World of February said:

"Ellsworth & McNair, horse commission merchants at this center, collected a load of ten white-faced drafters for shipment to the Quinn & Nolan Ale Brewing Company, Albany, N. Y. The order called for every horse to have four white legs to knees and hocks and a white stripe in face. They were all Shire and Clydesdale grades, and the weights ranged from 1,440 to 1,840 pounds per head. The teams were most excellently matched, and when trimmed and cleaned up for use on the splendid wagons of the purchasing brewery these horses will certainly furnish some grand advertising.

"Some folks may think that it is an easy trick to collect car-loads of horses of a stated sort and one color with the whole country to draw from. It is, however, nothing of the sort. Horses of a stated weight and character, but greatly diversified as to color and breeding, may be got together in a hurry; but when it comes to matching up a load of ten or more, it is a big job, which is proved by the fact that it took Ellsworth & McNair just about two months to gather up this lot. The average cost to the purchasing corporation was about $325 per head."

GOOD BOOKS AND PAPERS.

THE BOOK OF ALFALFA by F. D. Coburn, of Kansas. History, cultivation and merits. Its uses as a forage and fertilizer. Soil and seeding, cultivation, harvesting, storing. Alfalfa as a feed stuff; in beef making; in the dairy; for swine; for horses and mules; for sheep raising; for bees; for poultry; for crop rotation, etc. Alfalfa from A to Z. An illustrated book of 336 pages, 6x9 inches, bound in cloth. Worth a million but sold for $2.00 and mailed postage paid. We also include one-year's subscription to The National Farmer and Stock Grower.

DAIRY LABORATORY GUIDE by H. E. Ross, of the New York State College of Agriculture. This is for advanced dairymen and students, an educational work. In this book the scientific principles upon which the dairy industry is based are stated clearly and simply, and wherever it is possible these principles are illustrated by practical problems and examples. Ninety pages, 5x7 inches. Bound in cloth. Cash price, 50 cents. Issued by Orange Judd Co., 439 Lafayette street, New York.

"FEEDING FARM ANIMALS." This is a 500-page book, bound in cloth, pages 5½x8 inches, and the price is $2.00, which includes delivery by mail. There are twenty-one chapters. It covers meat and milk production, general feeding and the care of domestic animals. It is claimed to be The Most Teachable Book by far ever written on the subject of live stock feeding. Send orders to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CELERY CULTURE. This is by Prof. W. R. Beattie, of the Bureau of Plant Industry, United States Department of Agriculture. A practical guide for beginners and a great help to experienced celery growers. It is one of the little books that are worth their weight in diamonds. There is no line of gardening that pays better. **CELERY CULTURE** is fully illustrated, bound in cloth, 150 pages, 5x7 inches. The price is 50 cents, including mailing. Sold by Hale Publishing Co.,3550 Vista Ave., St. Louis, Mo.

SQUABS FOR PROFIT by Wm. E. Rice and Wm. E. Cox, expert pigeon fanciers. It includes all particulars of how an original investment of $50 has grown to $3,000. The illustrations are simply superb. The plans and specifications for buildings are as complete as an expert architect can make them. The book contains 118 pages, 5x7 inches, bound in cloth and will be sent postpaid for 50 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

SHUMWAY'S SEED CATALOGUE for 1911 is very interesting. Wholesale prices are named to large planters. The vegetable list is one of the finest and the flower seeds are unsurpassed. Every farmer should have one. Write to R. H. Shumway, Rockford, Ill.

G. D. SUTTON'S SEED CORN CATALOGUE is showing corn to advantage. Two-thirds of it consists of farmers' letters, recommending his seed corn—a most astonishing lot of testimonials. Write to G. D. Sutton, Dept. 7, Mason City, Ill., and get a copy.

FARMERS' BULLETIN NO. 428. This bulletin is entitled "Testing Farm Seeds in the Home and in the Rural School." It completely fills the bill, there being forty-seven pages of illustrated instructions in regard to testing every variety of farm seeds. Write to Hon. James Wilson, Secretary of Agriculture, Washington, D. C., for a copy of Farmers' Bulletin No. 428.

A National Association of Land Men has been organized for the investigation and exposure of land frauds. If it will expose the wild-cat schemes, the organization will be of great benefit to all concerned.

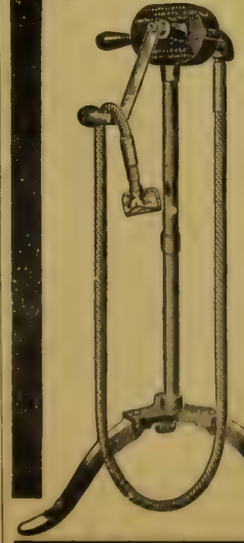
Many Good Horses Are Ruined

In the spring by working them hard all day and letting them stand at night in the heavy, wet hair which takes hours to dry out. Clipped horses dry off quick, they rest well, and they get all the good from their feed. They are fresh and full of life and vigor. Every man who considers the unnatural conditions under which his horses live will promote their health and welfare by clipping them in the spring.



You can clip a horse in 30 minutes with this

Stewart Ball Bearing Clipping Machine

This machine weighs only 36 pounds, boxed. You can carry it about anywhere. It has six feet of new style, easy running flexible shaft, so all parts of the horse are reached easily. It has the **famous Stewart one-nut tension knife**—highest grade. The gears are all cut from the solid steel bar and made file hard. Then are enclosed and protected from dust and dirt, where they run in constant oil bath.

Clip Your Cows, Too, with this Machine

Requires no change to clip cows with it. The flanks and udders of milk cows should be clipped every three or four weeks. It aids in getting clean, uncontaminated milk. **It is guaranteed for 25 years** and anyone can run it and do perfect clipping with it. Price, all complete as shown, is only . . . .

$7.50

GET ONE NOW at your dealer's, or send $2.00 and we will ship C. O. D. for the balance. Write for new 1911 Catalogue. **DO IT TODAY.**

We want one representative in every community to demonstrate and take orders for Edwards Interlocking Reo Steel Shingles. Write us today—now! (40)

THE EDWARDS MANUFACTURING COMPANY

307-357 Lock Street, CINCINNATI, OHIO

Jersey Bull Calves.

At the last annual meeting of the Missouri Jersey Breeders' Association there were read about twenty letters from farmers who had gotten pure-bred Jersey bull calves through the Bull-calf Distribution Committee. These letters are entirely too long for publication, but would make great reading for three classes of people: First, those breeders who believe that the distribution of these calves interferes with the sale of calves at breeders' prices; second, those breeders who believed that the farmers getting these calves would not give them proper care or appreciate their true value; and third, some farmers who doubted if really good calves wo ild be sent out at this price.

These letters show that the calves are fully apprciated; that most of the people who got them would not otherwise have been able to have secured a bull that would build up their herds; and the burden of all these letters is the expression of the hope that the Missouri Jersey Breeders' Association will continue this distribution work, the writers believing that it will result in untold benefit to the dairy interests of the state.

At this meeting it was decided to continue this work of distributing pure-bred bull calves throughout the coming year. Any dairyman or farmer in the state who wishes to secure one of these calves can do so for the nominal price of $10, the calves being shipped at from six to eight weeks of age. These calves are from registered sire and dam, but are not themselves registered, and will not be for the low price named, as it is desired that they shall be used exclusively on common or grade cows in upbuilding grade dairy herds. It is an opportunity for any dairyman who really cares to improve his herd to do so.

It might be interesting to mention a few of the letters referred to to indicate their general tenor: One farmer writes: "The calf I received through the Jersey Breeders' Association is making a fine-looking calf, and I am more than pleased with him. I think the work should be continued, as it will enable many a man to own a pure-bred bull who would not otherwise own one. Every calf put out will increase the herd at least ten cows to the bull in four years, and in some localities a great deal more. Several that own one Jersey cow have spoken about breeding to my calf." Another writes: "I shall always be grateful to the association for the assistance it has given me, and I truly believe it has not only been of service to those it has helped in this way, but that its members will find that their sales will increase, owing to the increasing demand for pure-bred stock. Since securing my bull one man here has purchased a blooded Jersey male and five cows. Being so much benefited myself, I trust that the association will continue the plan, so as to assist others." Another: "I consider it a great benefit to people in our circumstances, as we are anxious to improve our herds but have not the means, and by this we are enabled to do so." Still another: "I am more than pleased with the calf received from your Distribution Committee. I heartily endorse the plan of distribution. This is bound to build up our dairy herds from the fact that the general run of dairy herds are only grades, and if such cows are bred to pure-bred sires there is no reason why this should not be of great benefit to the dairy business." Another says: "Several of our neighbors have seen our calf and are thinking of buying them one. I think the association is a fine thing."

Farmers wanting one of these calves should write to either of the undersigned.

ROBT. F. TESSON, Secretary, Clayton, Mo.

ALBERT S. ENNIS, 712 Central National Bank Bldg., St. Louis, Mo.

Holstein-Friesian Averages.

Speaking of 188 cows and heifers admitted to the Advanced Register of Holstein Cattle early in January. Mr. Malcolm H. Gardner, Superintendent, says:

"This herd, of which one-half were heifers with first or second calves, produced in seven consecutive days **71,837.5** pounds of milk, containing **2,517.693** pounds of butter-fat, thus showing an average of **3.50** per cent. fat. The average production for each animal was **382.1** pounds of milk, containing **13.392** pounds of butter-fat, equivalent to **54.6** pounds or over **26** quarts of milk per day, and over **15.6** pounds of the best commercial butter per week. This report may be taken as a fair sample average production for the rank and file of the Holstein breed, there being no phenomenal records reported, and the herd averages being practically the same as those of last report."

How a Cow Should Be Judged.

Silas wasn't quite sure that Jedediah's old horse was quite up in value to his cow, and he demurred:

"Wa-all I dun'no, Jed'diah," he said, scratching his head dubiously. "That there old caow o' mine hez her good pints."

"Sure she has, Si," returned Jedediah, "but I cal'late ye gotta agree that a caow's to be jedged not by her pints, but by her quarts."—Harper's Weekly.

Test of Tuberculin Test.

Sixteen head of cows from the farm of A. Porter, of Lisle, Dupage county, Ill., were slaughtered at Chicago on February 3d because they had reacted under the tuberculin test. The milk from these cows had been barred from sale in Chicago. According to report, fourteen cows showed plainly developed lesions of the disease and the other two showed no trace of it. The Chicago health authorities consider this a vindication of the test, and the milk producers were dissatisfied because the death sentence included two absolutely innocent cows.

DAIRY AND CREAMERY NOTES.

The Swede Park Dairy Farm at Gray's River, Washington, sold cream to the amount of $105.67 per cow and the cost of feed per cow was $40.60. There were eighteen grade Jersey cows in the herd and a pure-bred Jersey bull.

The Twenty-sixth Annual Meeting of the Dutch Belted Cattle Association of America will be held at the Hotel Imperial, Broadway and Thirty-second street, New York City, on May 11th, 1911, at 12 o'clock noon. Representatives of the agricultural press and non-members who are breeders are invited to be present as guests of the association. Mr. G. G. Gibbs, of Marksboro, N. J., is Secretary of the association.

According to Dr. Wm. P. Cutler, Kansas City milk is not up to required standards. Out of a total of 280 samples examined 127 were found to be either adulterated or misbranded. Forty-nine per cent. of the examples of cream examined were found to be either misbranded or aduiterated.

In the cities during spring and summer buttermilk is sold over the counter of saloons and restaurants. It sells at retail at five cents a glass and the glass does not contain a full pint. Farmers are not getting a fair price for their buttermilk.

Sheboygan county, Wisconsin, is credited with making 161,019,469 pounds of cheese in the year ending June 30, 1910.. In butter-making Dane county was first, with 5,509,246 pounds.

At the meeting of the Connecticut Dairymen's Association held recently at Hartford, F. J. Baldwin, of Watertown, exhibited dairy butter that scored 97.75; and A. Kelley, of Bloomfield, exhibited dairy butter that scored 97. The top score for creamery butter, unsalted, was 97.25, and for salted 97.

The 1911 United States Separator

A MARVEL OF EASY RUNNING

There have been tremendous advances in the running qualities of the United States Cream Separators.

The skimming power is there. The same that won the world's record in fifty consecutive tests extending over a period of thirtv days with the milk of ten different breeds of cows. .0138 of one per cent.

With the new Interlocking skimming device, the centrifugal action on the milk is so **intensified,** the course along which the milk is forced to travel so **lengthened,** the skimming force so **increased**, that the Interlocking bowl for any given capacity is reduced nearly **one-half** and runs with about **half** the **power** required for older models.

Now add to this great improvement the fact that the United States Separator is the only successful separator that distributes the incoming volume of the whole milk **evenly outside the cream zone,** thus preventing any remixing of cream and skimmilk, and you will see why it is that the Interlocking Style U. S. Separator is gradually displacing every other separator on the market.

A free demonstration will be given by selling agents who are located in nearly all dairy sections of the country. Ask for catalogue **125** today and we will give you agent's name.

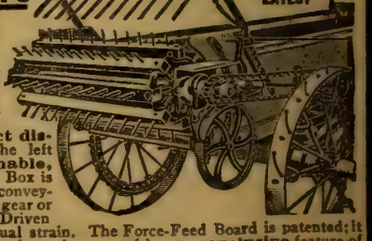
MANURE SPREADER

30 DAYS FREE TRIAL. **An Up-To-Date Spreader With More Good Points Than Any Other** **$45.70**



Special Points of Merit: **Endless Conveyor,** made of angle steel—can't rot, break or warp—lasts a lifetime. **Eccentric Force Feed** applies power direct to ratchet force feed, which is controlled by hand lever, enabling you to spread manure thin, thick or medium. **Perfect distribution** at all times. When load is discharged, the left lever throws all working parts out of gear. **A detachable, force-feed follow-up board** is furnished **free.** Box is of hardwood; solid bottom, on which the all-steel apron conveyor works. **Operated by only two levers.** Not a gear or cog in entire machine. Fits any wagon gear or truck. Driven direct from both rear wheels, doing away with unequal strain. The Force-Feed Board is patented; it forces manure out of box, and is thrown out of gear when it reaches rear of box—an **exclusive** feature of the **"Peerless"**—not found on other machines. Guaranteed to be the best Spreader made.

CANADIAN PACIFIC IRRIGATION COLONIZATION CO., Ltd.

318 9th Ave., West, Calgary, Alberta, Canada

Wisconsin Butter Scores.

At a recent butter exhibition in the state of Wisconsin, C. E. Lee, in charge, reports that the average moisture content of the sixty-six exhibits was 13.5 per cent., and the average salt content, 2.7 per cent. Seven exhibits in the Whole-milk Class averaged 93.46. The highest score, 95.00 was received by F. V. Merryfield, of Troy Center, Wis. In the class for butter made from gathered cream, twenty-five exhibits, average score 90.72, highest score 93.75, was received by R. O. Brye, of Readstown, Wis. Milk and Cream Class, twenty-five exhibits, with an average score of 92.85, highest score 96.50, was received by Herman C. Raven, of Clinton, Wis., and second highest, 96, by G. P. Sauer, of East Troy, Wis.

How to Rear a Calf.

Did you ever rear a calf? After it has run with the cow long enough to have consumed the first milk, which takes two or three days, it is best to wean it and feed it by hand.

In teaching the calf to drink, place two fingers in its mouth and at the proper moment withdraw them and put its head into the bucket of milk. After a few lessons the calf will soon learn to drink.

It should be fed whole milk for about four weeks before you add any grain or skim milk. The milk should be fed to the calf warm; that is, with the animal heat still in it.

The calf should be fed about four quarts of whole milk a day at first. After about three weeks one quart of skimmed milk may be added. This skimmed milk should be warmed. About a teaspoonful of oil meal should be added to the milk.

Use Care in Feeding.

Care sould be taken that the calf is not fed warm milk one time and cold milk the next, for this is almost sure to produce the scours. In case the calf does not get the scours it should be fed ground dried blood, in doses of a teaspoonful to a feed, until the trouble has stopped. This dried blood is sold at most feed stores. In case it cannot be obtained a tablespoonful of common salt will be found very effective.

Teach the calf to eat grain after it is four or five weeks old. Let it go without one feed of milk, so it will be hungry, and place a few grains in the calf's mouth. If you hold up its head it soon learns to chew the grain.

Corn should be placed in a box so that the calf can reach it. All the corn that the calf will eat up clean should be fed. In case more corn is fed than the calf will consume, the box or trough should be cleaned before the next feed. Calves will not eat so much if there is any feed left over.

Add Skim Milk Slowly.

The increase of the skim milk should be gradual until the calf is about seven weeks old, when it should be receiving only skim milk. The feeder must be governed by the size of the calf and its growth, but the average calf should receive about eight quarts daily when it is eight weeks old. When the calf is fed twice a day it will drink more milk than is needed, if it has a chance.

If the calf is born in the late fall or winter it should have access to bright alfalfa or clover hay. The stall should be kept clean. Plenty of clean straw should be used for bedding. The calf should have access to a lot large enough for exercise and sunshine.

If the calf is born late in the spring it should have access to a good pasture. Good, cool water should be supplied. Alfalfa or clover makes excellent pasture for young calves.—From the Kansas Industrialist of the Agricultural College.

The Milking Machine.

A dairyman said recently: "I would not give fifteen cents for any milking machine I have seen so far," and that unfortunately is the opinion of many dairymen who have about the number of cows one or two hands can milk. As the dairy becomes larger the milking machine becomes a better business proposition.

In Australia milking machines were in use before they were on the market here, and an expression from an official on the subject is of interest.

Mr. R. Crew, Superintendent of Butter Exports of the Province of Victoria, said:

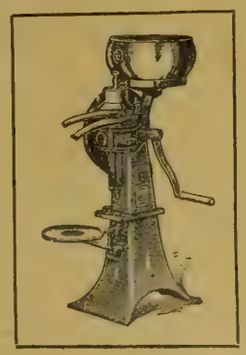
"The milking machines in Victoria have now been running for half a dozen years with varied results. As was anticipated by some at the beginning, many plants are rusting, while in other places they are regarded as an unqualified success. Strange to say, the successful users are to be found in groups, due most likely to careful instruction by experts when installed and to continued attention by the users. To run milking machines properly requires a rare combination of qualifications, but first and foremost the user must be a dairyman and understand cows thoroughly. The udders must be carefully washed and each quarter checked before attaching a machine. The work must be rechecked immediately after detaching and before the cows are dismissed.

"The user of a milking machine must also be a mechanic and a resourceful one at that. He should undergo a thorough training, if complete success is to be achieved, and he should realize to the full the necessity for taking all parts of the machine to pieces, cleansing and sterilizing it after use and keeping it free from contamination until it may be required again. A high standard of cleanliness must be continuously observed.

"Some time ago the Director of Agriculture requested me to inquire and ascertain what effect the use of the machine had on the quality of the milk. I was able to get monthly tests from a herd for four years prior, and for four years subsequent, to the installation of the machines. I found that the averages were quite as good with the machines as they had been before."

Genuine and Imitation CREAM SEPARATORS

The all-around superiority of the DE LAVAL Cream Separators, in farm as well as factory sizes, has now become so generally recognized that would-be competitors have, almost without exception, adopted the pretext of merely claiming that the machines they offer are "like the DE LAVAL," or "as good as the DE LAVAL," while some even go so far as to claim that their machines are made under a patent license from the DE LAVAL Company.



All of these claims and pretenses are false and a fraud upon the buyers of such machines, except to the extent that each and everyone of these would-be DE LAVAL imitators is using some ten to twenty year old patent expired and now abandoned type of DE LAVAL construction, though lacking all the essential elements of the improved DE LAVAL machines of today, or for that matter the DE LAVAL machines of the past five years, while none of them do or can use the still patent protected "split-wing" distributing shaft feature of all DE LAVAL machines since 1900.

Buyers of separators are cautioned against such deceptive misrepresentations by those who may try to induce them to purchase machines claimed to be similar to the DE LAVAL, but which in no way compare in efficiency, capacity or general practicability with the DE LAVAL machines of TODAY.

DE LAVAL Cream Separators are as much in advance of all attempted competition today as at any past time, and their use is speedily becoming as universal on the farm as it has long since been in the larger sizes in creameries and milk stations the world over.

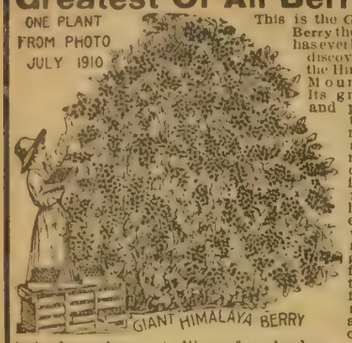
Greatest Of All Berries

ONE PLANT FROM PHOTO JULY 1910



This is the Greatest Berry the world has ever known, discovered in the Himalaya Mountains. Its growth and productiveness is simply marvelous. It is perfectly hardy everywhere and grows from 30 to 50 feet in a season and can be trained on arbors or trellises of any kind.

The Engraving shows one Plant from photo July 1, 1910, which is trained to a large trellis loaded with fruit, and continued bearing until October.

The Fruit is black, almost seedless and the large luscious Berries borne in enormous clusters will literally melt in your mouth. It is unsurpassed for eating fresh, cooked, canned or preserved in any form and is the Greatest of all Berries for all Climates.

Everybody can and will grow this Great Berry for it is the easiest fruit in the world to grow, as splendid for city people or any one with limited space, for it can be trained up from the ground like a tree producing Berries from 3 to 4 months, growing larger and producing more Fruit each year.

We guarantee this the Greatest of all new Fruits and can produce facts no one can get away from.

Beware of imitations. Giant Himalaya is a family by itself and highly valued wherever grown. The English Himalaya or Plants raised from seeds cannot be relied upon for fruit or hardiness. Our plants are from tested parent stock. Complete satisfaction guaranteed

Instructions for cultivation with a booklet of receipts for using in many ways free with all orders.

Strong plants 30c each, 3 for 60c, 6 for $1.00, 15 for $2.00, 25 for $3.00, postpaid.

Our 1911 Catalogue of Vegetable and Flower Seeds, Plants and Rare New Fruits free with every order.

HORTICULTURAL NOTES.

Alvin and Pasadena, in Southern Texas, commenced shipping strawberries to market on February 7th. This is earlier than usual, the difference being due to very mild weather.

A correspondent in the Northwest Horticulturist says: "Reports from Hood River, North Yakima, Wenatchee and other fruit-growing sections are to the effect that wherever potash has been used, fruit of all kinds has been more even in its ripening, more highly colored, and more solid, which meant a superior shipping quality."

The Grand Valley of Colorado shipped out three thousand car-loads of fruit in the year 1910. The Valley is ten miles wide by twenty-five miles long. It is reported that the Rev. J. A. Becker, of Grand Junction, sold from his orchard of Jonathans $1,000 worth of fruit from a single acre.

Secretary W. B. Lloyd, of Kinmundy, of the Illinois State Horticultural Society, offers any public school in Illinois, either city or country, wishing a set of horticultural books for the library, a set of twelve or fifteen volumes of the transactions of the society, which contain an abundance of information on horticultural subjects. He might also send a few sets outside of the state, if requested to do so.

On February 20th, at Carthage, Mo., a Strawberry Growers' Association was organized, and the following were elected officers: C. E. Berryman, President; C. O. Harrington, Vice-President; L. C. Wormington, Secretary; R. E. Fey, Treasurer. Board of Directors and Shipping Committee—L. C. Wormington, James Eastridge and L. S. Durham. One hundred and fifty acres of strawberries have been pledged the association.

From Kingsville, Nueces county, Texas, on February 18th, it was reported that in regard to Bermuda onions the prospective car-load shipments for the season would amount to 4,954 cars, an increase of 2,204 cars over last season.

Allison Farmer, of Bailey, N. C.; J. Paul Robertson, of Rowland, N. C.; and Plato Michell, of Aulander, N. C., won prizes in the Boys' White Dent Corn Exhibit at the National Corn Show.

The Texas Stockman and Farmer says. "Between five and six hundred cars of Bermuda onions will be marketed from Asherton, Dimmit county, this year. Two years ago that entire section was one vast cattle ranch, and the man with the hoe was not in evidence."

CREDIT SUBSCRIPTIONS.

We desire to invite attention to our blank form at the end of this item, which can be filled out for subscriptions on credit. This is an invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper generally slips in a list of handy premiums for the subscriber to select one, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

BURBANK'S CRIMSON RHUBARB.

A premium worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist, Luther Burbank, of California. Burbank's Crimson Rhubarb is the king of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year. A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge the crop. Send us One Dollar for two-years' subscription to The National Farmer and Stock Grower, and we will send you by mail, prepaid, one copy of a booklet by J. B. Wagner, entitled "Rhubarb For Profit," and Six Roots of Burbank's Crimson Rhubarb. Send your dollar quickly and the book and plants will be mailed you from Pasadena, California, where they are grown. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Wheat Market.

The statistical situation of the wheat market is strong, and the selling market does not reflect it. Events have proven that the 1910 crop of wheat was large enough for all purposes. By casually looking at comparisons of one year with another we found wheat in February averaging 25 cents lower than a year ago. On January 31st when the market closed the quotation for May delivery was 96 cents a bushel. On February 27th the closing May quotation was 89½ cents, which is a decline of 6½ cents a bushel compared with the close of the previous month. The closing price a year ago was $1.15¾ a bushel.

Canada has had some first-class advertising recently. We also have some Canadian lands advertised on pages 11 and 20.

Horse-radish is selling at St. Louis at $5.25 to $5.50 per barrel.

THE TARIFF AND THE FARMER.

The Province of Burma, in India, exports annually rice to the value of forty millions of dollars. The Free Traders would like to have this rice dumped into the United States without paying any duty. At present the duty is two cents a pound.

In his speech on reciprocity with Canada, Mr. Robert F. Broussard, of Louisiana, said: "That wheat should be put on the free list and a tax retained on flour; that barley should be put on the free list and a tax retained on barley malt; that cattle, sheep and hogs should be put on the free list, while meat, pork and other meat products should be kept on the dutiable list is a matter not easy to fathom, unless we shall admit that we have become converted to the insidious doctrine of New England of free raw material, by which it hopes to continue the control over manufactured articles, which through protection it has been able to maintain heretofore."

In his address on reciprocity with Canada, Mr. Volstead, Republican Member of Congress from Minnesota, said: "If the Republican party ever promised anything, it has promised in plain and unequivocal language protection to the farmer. This treaty is a repudiation of that promise, and its ratification will brand the Republican party as faithless."

In Congress, during the address on the subject of reciprocity with Canada, Mr. Andrew J. Volstead, of Minnesota, said: "The naked proposition is that this treaty has been entered into for the purpose of lowering the price of farm products, and that it will accomplish that purpose no one at all familiar with the situation can doubt. It is undisguised, selfish, class legislation in behalf of the cities as against the producers of food."

Mr. C. B. Randell, M. C., of Texas, is in favor of putting meat on the free import list. He calls it voting against the Beef Trust. Yet he is in favor of the beef coming in free of duty from the South American Beef Trust.

It is estimated that the California lemon crop this year will be 7,000 car-loads or over. This is one of the industries Free Traders hope to damage by admitting foreign lemons free of duty. The duty is only one and one-half cents a pound.

"It is the limitless agricultural future of Canada that must be considered in the matter of admitting Canadian grain duty free." So says a Board of Trade expert who is trying to understand the situation—not to create it or to influence it.

"Farmers who have complained about the new tariff law will sit up and take notice of the action of the Butter and Egg Exchange of Pittsburg in asking Pennsylvania Congressmen to have the duty abolished on these articles when brought in from Canada. The Exchange says butter prices would drop six cents a pound and egg prices six cents a dozen. Lots of people are for a reduction of the tariff until it comes to the articles they produce."—Tacoma Ledger.

Hon. John Dalzell, of Pennsylvania, speaking on the subject of the proposed reciprocity treaty with Canada, said in Congress: "It is an abandonment of the protective policy and an espousal of the doctrine of free trade. It is in violation of the history, the traditions and the pledges of fifty years of our Republican platforms. It is class legislation of the most obnoxious character. It selects from all the classes of the community the farmer and deprives him of the protection accorded to all other classes. It compels him to produce in a free-trade market and to buy in a protected market. It is in the interest of the foreigner and against the American."

In his speech on Canadian reciprocity, Hon. Benj. K. Focht, of Pennsylvania, said: "While the great agricultural industry of the country is in this measure administered a staggering blow, and every product of our high-priced land is brought into competition with the products of the cheaper land of Canada, it is to be seen written in this proposition ample protection and advantage for the Beef Trust, the Paper Trust and the Milling Trust. Free wheat and cattle which the American farmer raises, but protected meat and flour which the farmer must buy, is discrimination against him so rank and unjust as to call for condemnation and unwavering opposition."

The Chicago Drovers' Journal says: "While reciprocity with Canada is uppermost in the public mind, the Canadian tariff may be of interest, and is as follows: Flour, 60c. per barrel; rye flour, 50c. per barrel; wheat, 12c. per bushel; corn, for distillation, free; oats, 10c. per bushel; rye, 10c. per bushel; barley, 15c. per bushel; flaxseed, 10c. per bushel; malt, 45c. per 100 pounds. Imports for 1910: Flour, 31,398 barrels; rye flour, 2,921 barrels; wheat, 54,964 bushels; corn, 6,583,893 bushels; oats, 123,361 bushels; rye, 1,306 bushels; barley, 164,532 bushels; flaxseed, 1,806 bushels; malt, 2,184,463 pounds."

The farmer had considerable difficulty in obtaining a desirable working shoe that combined comfort with ease and appearances until the steel sole was invented. One pair of steel-sole shoes will outlast many pairs of leather shoes. The subject is worth investigating. Write to Ruthstein, 154 Seventh street, Racine, Wis., and ask for copy of the free book entitled "The Sole of Steel."

Mr. Wm. A. Moore, owner of about a hundred first-class show horses, has announced a sale of about seventy of them to take place at Durland's Riding Academy, Sixty-sixth street, New York City, on April 17th and 18th. The reason asserted is that Mr. Moore intends hereafter to have one horse in a show ring in competition with other exhibitors instead of competing for every prize with half a dozen of his own horses. The New York horsemen appear to consider Mr. Moore is doing the right thing in the interest of the show ring.

JIM ROHAN'S CHICKEN IDEALS.

Jim Rohan is President of the Belle City Incubator Company, and anyone who wishes to study incubators or brooders from a practical, money-making standpoint will find it to their advantage to write for his booklet, "Hatching Facts." In "Hatching Facts" he mentions Mrs. Clifton, who last year succeeded by hatching out 140 chicks from 140 eggs—a feat that can never be surpassed. Write Belle City Incubator Company, Box 74, Racine, Wisconsin.

According to Wallace's Year Book, 1,150 trotting meetings were held on 1,013 tracks in the United States and Canada. The total number of trotters in the 2:30 list is reported to be 25,586, and of pacers in the 2:25 list, 18,694.

Sherwin-Williams Paints.

Be sure to obtain your paints from a reliable house. There is more trash called paint than anyone can imagine without experience. This admonition is worth something. Start right. First send for "The Book of Colors" and then decide on the paints you wish to buy. Address The Little Paint Man, care of Sherwin-Williams, 689 Canal Road, Cleveland, Ohio.

Poor to fair broom corn is selling at $40 to $60 per ton; good average run, $70 to $80; and fancy and long brush, $90 to $100. These were St. Louis quotations March 1st.

"A good investment for the farmer"

—Says the Little Paint Man

A good investment for the farmer is paint. It is just as good an investment for the farmer as fertilizers, seed corn or implements. Paint pays—that is, good paint does.

The outside of every building on the farm is steadily depreciating and will have to be renewed unless it is painted to protect it from the weather.

Lumber costs more than paint. A little lumber costs more than a great deal of paint. Building costs more than painting.

Raw lumber in a house or any other building absorbs dampness, dries out under exposure to the hot sun, and soon checks and decays until it is too late to save it even with good paint.

With proper painting a farm building should last forty or fifty years and longer.

When painting to protect your buildings, also paint to make them look well. It is just as cheap to have the right colors as the wrong ones. You may need advice on this. I have made a book of color schemes for the outside of farm houses and other farm buildings, including barns, that not only suggests the colors, but also tells about the paint.

It is free, so you had better write for it today.

Address THE LITTLE PAINT MAN, care of

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husk and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure

and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Louisiana Corn.

Two pounds of Johnson County White Corn, grown by L. B. Clore, of Indiana, were furnished as a subscription premium by The National Farmer and Stock Grower to I. L. Haile, of Linville, La. This was in the spring of 1910. With this seed corn Mr. Haile produced a nice crop and exhibited ten ears selected therefrom and won first prize in class for White Dent Corn and the championship prize for Best Ten Ears exhibitted at the show. This was at the Louisiana State Fair. He won $150 in all with ten ears of corn. See our CornPremiums mentioned on page 2.

We Want to Talk
Wagon Wheels
To You

Better, stronger, more convenient wheels than you have ever used. We are making old wagons over for thousands of farmers; making them as good—even better than—they ever were, by fitting

Electric Steel Wheels

on their old running gears. How is your old running gear? Good, is it not? And the wheels—worn out? Wouldn't it pay you to write us a postal and let us show you how cheaply we can turn your old running gears into a rattling good, low-down, handy farm wagon? We have a great book for farmers to read who think their old wagons are "done for". A postal brings it. This penny investment will save you many a dollar. Write for the book to-day.

Electric Wheel Company
Box 40, Quincy, Ill.

A County Fair Sweepstakes.

Two pounds of Johnson County White Corn, grown by Mr. L. B. Clore, of Franklin, Ind., was furnished by The National Farmer and Stock Grower to J. T. Boyd, of Rardin, Coles county, Ill. This was in the spring of 1910. From this seed corn he grew the ten ears that won first prize at the Coles County Fair and the sweepstakes prize for the best ten ears on exhibit. See our Corn Premiums mentioned on page 2.

Beware of Puddled Ground.

Puddling the ground around plants destroys them by preventing the passage into the soil of the oxygen of the air. The air in soil does not move laterally very much, and in this respect is very much like water. The air in the soil comes mostly from above, and if the upper layer of soil is packed so hard that the air cannot pass through it, the roots below that packed layer will be deprived of most of the oxygen they should receive. A little air may pass in laterally, but if it does the amount is too small to count for much in the life functions of the plant or tree growing in such ground.

The other day the writer was at a large school beside which is a large play ground. In the play ground are several shade trees. Around each shade tree has been recently erected, at some distance from the tree, a very substantial fence in the form of a hexagon. The principal of the school told the writer that until this was done the trees did not grow at all, but seemed to be always in a languishing condition. The feet of the children packed the ground around the trees hard after every rain, and this kept out the life-giving elements of the air. The roots could get all the other food elements they needed with the exception of oxygen. But after the trees were protected and the ground worked up the trees began to grow and are now doing well. Keeping the children away from the trees was the only thing needed to start them into new life.

Some time ago the writer was on a farm where the hogs were allowed to run in the orchard. There was quite a drove of the animals, and they had selected certain trees under which to lie in the heat of the day. These trees were large, leafy ones, but were rapidly dying. The hogs had tramped the ground hard under the trees and were keeping it hard. The farmer finally decided to save his trees by fencing these particular trees from the hogs.

On soils that contain a considerable amount of clay there is frequently considerable loss from puddling, which is the popular term used for ground that has been pounded when wet till it will hold water.

Note what happens to the clay soil where the footpath runs across it. The grass grows short and stunted. This is simply because the soil has become puddled.

Note in the pasture where the foot of the farm animal has broken the wet sod and made a place that holds water. That soil is puddled and will remain puddled perhaps for a whole season. On clay land much damage is done by permitting the live stock to go on it in the spring when the ground is soft and wet. One puddled hoofprint means little, but what about ten thousand hoofprints?

Wet clay soil tramped by animals is so impervious to water that in the West, where irrigation reservoirs are made on a small scale, the soil is made to hold water by wetting the bottom of the reservoir and then having it tramped by horses.

Remember that the soil must always be porous enough to permit the air to get to the roots of the trees and plants if good growth and health are desired.

Make $4.00 to $8.00 More From Each Acre Sure!

The One Spreader That Stands the Strain

You want a *strong* spreader—one that can stand the strain. There is *only one* in that class. It's the Great Western. Over 100,000 progressive *farmers*, and most *U. S. Government* and *State Experiment Stations* have proved it. See the Great Western alongside of the next best spreader. Then you will know why we can guarantee every Great Western to stand 50 per cent more strain and require 50 per cent less repairs than any other spreader in the world.

The reason is *high quality*. We build spreaders as they *should* be built. When you know how much *more* oak, hickory, malleable, steel and wrought iron is in the Great Western Spreader than in any other, you'll *understand* why the Great Western is the *only* spreader *strong enough* to *stand the strain*. When you know what *other* spreaders are made of it won't be hard for you to understand why they are *not* strong enough to stand up under the heavy loads and hard work. The

Great Western Endless Apron

Spreader has an endless apron that runs on 3 sets of extra large rollers—drawn equally from both sides, so there's no friction—no binding, no matter how unevenly you load it. The Great Western Spreader has a big, 16-inch, 40-pound, unbreakable, Malleable fifth wheel. You can't pull out the front end no matter how heavy the load or how many horses you put on. The big malleable fifth wheel is attached to *two*, big, solid oak bolsters, by malleable braces. The Great Western front trucks are set two feet under the load—so the load is carried equally on the four wheels. Great Western pole is made of solid oak—*not* pine or inferior woods. Our big Free Book tells about all the Great Western advantages. It proves how much better it is to pay a few more dollars *at the start* for a Great Western Spreader than to be paying the toll of constant trouble, delay and repairs that *any other* spreader is sure to mean. Don't buy any spreader till you read the startling spreader facts in our book. Send us your name *now* and ask for Free Spreader Catalog No. S254 Address

SMITH MFG. COMPANY
158 E. Harrison St.
Chicago

No matter what size or style of spreader you want, wooden or steel wheels, 35 to 100 bushels capacity—you'll suit yourself best by getting a guaranteed—

Great Western

An authority on the subject, writing early in February, said: "Farm supplies of oats are pressing on the market more than usual, because of the mild character of the winter. Oats are fed on the farm for maintenance of animals, and this season much less than usual has been required because the weather was open enough to allow animals to get more than usual support from winter pasture. The few bushels saved on each farm through economies in feeding in the aggregate make a heavy additional volume in market."

AGENTS WANTED

We want men who are not actively engaged in business to act as our agents. We pay liberal cash commissions. Write for our catalogue and full particulars.

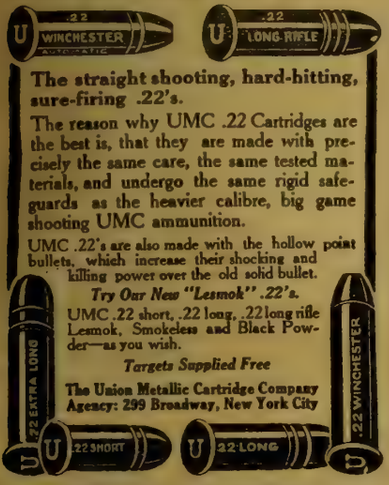
UMC .22 CARTRIDGES



The straight shooting, hard-hitting, sure-firing .22's.

The reason why UMC .22 Cartridges are the best is, that they are made with precisely the same care, the same tested materials, and undergo the same rigid safeguards as the heavier calibre, big game shooting UMC ammunition.

UMC .22's are also made with the hollow point bullets, which increase their shocking and killing power over the old solid bullet.

Try Our New "Lesmok" .22's.

UMC .22 short, .22 long, .22 long rifle Lesmok, Smokeless and Black Powder—as you wish.

Decrease in Pork Packing.

According to the Cincinnati Price Current the pork packing in the West during the year 1910 was 21,300,000 head. The year previous the total was 25,385,000 head, and the greatest year in the history of the trade was 1908, when 30,785,000 hogs were slaughtered in the West. For the five years next previous to 1910 the average annual slaughtering was 26,600,000, and for the five years next preceding the average was a little over 23,000,000. In comparison with 1909 the record for 1910 shows a decrease of about 16 per cent., and in comparison with 1908 a decrease of 31 per cent. Twenty years ago Western pork packing amounted to 16,980,000 hogs, and thirty years ago the total was 12,210,000. The immense growth of the pork-packing industry is indicated by these figures, and the lesson of it all is that no matter how many farmers raise hogs, nor how many they raise, the demands of the trade will not be fully satisfied for several years to come.

Value of Alfalfa Stubble.

"When in his system of rotation the farmer is ready to plow up his alfalfa, he has another inestimable contribution to the land's fertility in the stubble and roots. It is not recommended to plow under any considerable growth as a green manure, as the hay crop is too valuable. Its market value would buy more fertilizers than the same growth is worth for humus. After a field has stood for five or six years, the roots have added largely to the humus content. Prof. W. P. Headden, of Colorado, estimated that the fertilizing value of the stubble and 6½ inches of roots plowed under is about $20 per acre, while the value of the stubble and entire root system is not less than $35 per acre."—From Coburn's "The Book of Alfalfa."

The Grand Champion Single Ear.

R. A. James, a young farmer of Coles county, Ill., located near Charleston, won the $1,000 cup offered by Mr. W. K. Kellogg for the best single ear of corn, any color. Mr. James also won first prize in State Show for best single ear and second prize for ten ears of Yellow Dent Corn. The champion ear of corn measures 10 inches in length, 7½ inches around, and has twenty rows, with an average depth of five-eighths of an inch.

To Warm a Chilled Pig.

"Of all the means of successfully warming a chilled pig and restoring his interest in things earthly, probably there is nothing better than a pail or other vessel of water heated to about 95 to 96 degrees Fahrenheit, in which his body and limbs can be submerged for ten to twenty minutes. In many instances it will well-nigh revive the dead. If ater this hot bath Mr. Pig is dried and placed where he can suck a well-filled teat his outlook on the future will be much improved."—From Coburn's "Swine in America."

The David Rankin Implements.

The late David Rankin was the most conspicuous success as a farmer, and in addition thereto he founded a great business in the David Rankin Mfg. Co. at Tarkio, which will be found advertised in this paper. We hope our readers will write at once to David Rankin Mfg. Co., Box 291, Tarkio, Mo., and ask for special wholesale price catalogue of agricultural implements.

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone manufacture. In order to understand this subject, see page 23. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

The Champion Ten Ears.

For several years The National Farmer and Stock Grower has offered as a subscription premium a quantity of Johnson County White Corn grown by Mr. L. B. Clore, of Indiana, who is champion corn grower of the world. This year, with corn of the same breeding, his son, Roy D. Clore, won the grand champion sweepstakes for the best ten ears of corn, any color, at the National Corn Show. The principal competitors were J. G. Douglas, of Shelbina, Mo., who won the national sweepstakes for the best ten ears of Yellow Dent Corn; L. A. Vogler & Sons, of Hope, Ind., who won the sweepstakes for best ten ears of corn other than yellow or white; and A. J. Guptil, of North Berwick, Maine, who won the national sweepstakes for the best ten ears of Flint Corn.

A "Wise" Hog Raiser Tells Of Merry War Lye

Just take it from me that this "Merry War" Lye will do to "tie to", when it comes right down to increasing pork profits. *I've tried it and I know!*

I was born and raised on a farm and lived with the hogs, as you might say. I know 'em clean through and through—one end to the other—from "snoot" to "stern."

For many years I have studied hog habits. I know their ways in sickness and health, and want to tell you Hog Raisers right now—straight from the shoulder—that its your own fault if you let worms and cholera carry off your hogs.

No Excuse For Hog Losses

Yes, sir, I mean just that! There's no excuse nowadays for losing your pork profits, since the discovery of "Merry War" Lye.

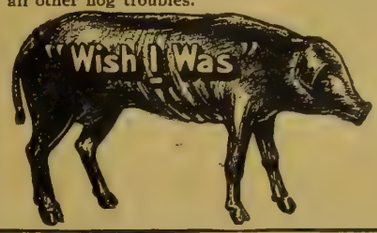
Of course it was different in the old days before hog raising was reduced to a science and carried on as a regular business. When I was a boy on the farm, we never knew just what would happen—whether our hogs would bring a big price for ham and bacon or have a "soap kettle finish."

It was all a matter of "luck"; we just took our chances against worms and cholera.

Many a time I have nursed a big drove of hogs along into prime condition ready for market, only to see my piled up profits in flesh and fat go glimmering in a few days from those pesky hog diseases.

What Merry War Lye Does

But now it's different. With the aid of a reliable remedy like "Merry War" Lye, I can snap my fingers at worms, cholera and all other hog troubles.



I sleep well nights because I know that my big droves are healthy and happy, fat and "sassy" eating well and laying on the firm, juicy flesh.

That's what "Merry War" Lye does for me, and it will do the same for any Hog Raiser who has the "gumption" to try it, as I did. Don't argue—don't think you "know it all"—don't doubt, but get busy and save your hogs.

A Friendly Warning

Just take my advice. Buy a can of "Merry War" Lye, mix a tablespoonful with slop for ten hogs, or one-half can with barrel of swill for larger number. Stir well, and feed night and morning.

In a few days you'll see marked improvements in your "porkers." "Merry War" Lye fixes 'em up right. It cleanses the system, tones the digestive organs, puts sick hogs in prime shape and makes 'em immune to contagious diseases. It both prevents and cures.

At Your Dealer's

Don't accept any "substitute" for "Merry War" Lye. Tell your grocer or druggist, that it is the only safe and specially prepared hog remedy, and that you want "Merry War" and nothing else. It comes in 10c cans, 24 for $2.00.

If you can't get "Merry War" Lye, write us and we will send you our valuable book on "HOW TO GET THE BIGGEST PROFITS FROM HOG RAISING." Address letter to—

E. Myers Lye Co., Dept. 22 St. Louis, Mo.

The Bradley Implements.

David Bradley was a noted agricultural implement manufacturer. The entire plant he established is now owned and operated by Sears, Roebuck & Co., and every implement made heretofore is yet made and sold direct from the factory. Mention this paper and write Sears, Roebuck & Co. for the book of David Bradley farm implements. See page 6.

Wheat Straw For Roads.

It is reported from Walla Walla, Washington, that wheat straw will play an important part in many miles of new good roads which will soon be built. Straw has been used for years on roads in that state. It has been found to give the best results when put on wet and mixed with the soil. When scattered loosely on the road it ignites and the work of weeks is lost.

The newer plans are better yet for the application of straw. In the first place, the roads will be plowed and graded and brought to a crown. When the road-bed has been harrowed and made level the straw is put on to a depth of six inches. A disk cutter is used to cut the straw up and mix it into the earth. If all the straw works into the road-bed more straw is put on until a cushion is formed. A steam roller packs the earth and straw into a hard mat as durable as asphalt, and a road that it is claimed will turn off water if the grade is right.

The new method of mixing the straw with the soil costs more than that of throwing straw into the ruts, and makes a road that will outlast gravel and cinders. In all the lowlands and uplands in the state of Washington straw will be used with the clay soil.

Pratt-Elkhart "40"

is the quietest, simplest and most powerful car in the "40" class. They are in use today in over half the States in the Union.

BACKED BY THIRTY-EIGHT YEARS' SUCCESSFUL MANUFACTURING EXPERIENCE

Bickmore Gall Cure Company
Box 482 Old Town, Maine

Horse, Mule and Cow Clipping Machine.

On another page we show an advertisement of the Chicago Flexible Shaft Company's machine that is used for clipping horses, mules and cows.

The clipping of horses and mules in the spring is generally conceded to be beneficial. The clipped animals not only appear better and are easier cleaned, but they dry off quickly at night, get a good rest and are more vigorous and thrifty.

Dairymen now regularly clip the flanks and udders of cows every three or four weeks. It is easy to wipe off the parts then before milking and insures clean, uncontaminated milk.

It would seem that a good clipping machine deserves a place on every farm, and the Stewart Ball Bearing Machine offered by the above firm has a splendid reputation among users.

Instructions For Horsemen.

To the stockman an ounce of prevention is worth several ounces of cure, for almost all the sickness that occurs among live stock might be avoided.

Men do not think of locking the barn until after the horse has been stolen. It is not easy to fight an unseen enemy, and an animal is often very sick before one realizes and thinks of how the trouble might have been avoided.

Of course, not all accidents can be foretold and prevented; but it is true that a majority of cases are not accidents, but are the natural results of someone's carelessness.

It is possible that a few suggestions may be made, which, if followed, will in part lessen a great deal of suffering, loss and expense.

An animal, warm from work, should not be allowed to drink large quantities of water.

Barley and corn should be fed only in small amounts. Most of the severe cases of colic come from the improper use of these two feeds.

A horse accustomed to hard work and good feed should not be so heavily fed during a rest—probably no grain at all, or at least a very small quantity, should be given on Sundays and other rest days.

Visit your animals before going to bed. Keep the grain where it is impossible for a loose animal to reach it.

Use woven wire for fences and eliminate the scarred hocks and quarters found on about seventy-five per cent. of Western horses.

Pick up loose nails, pull them or bend them over if they are found in boards. Keep the garden rake and scythe where they cannot be knocked down.

Wash and oil the collars occasionally. Two-minutes' work at the end of the day is sufficient to keep the surface of a collar clean, soft and pliable. A damp sponge and a cake of harness soap kept in the currycomb box are the only equipment needed.

Shoulder galls are due to one of two things: Dirty or ill-fitting collars. There is no excuse for either. —H. E. Kingman, Colorado Agricultural College, Fort Collins.

The Sheep Trade at St. Louis.

Clay, Robinson & Co., at the St. Louis National Stock Yards, sold on March 1st four double decks of Colorado lambs, 80 pounds average, at $6.25 per 100 pounds. This was the extreme top of the market. They reported good native lambs selling at $5.75 to $5.90; the best sheep at $4.50 for top wethers; ewes at $4.25 to $4.35; choice light yearlings, 70 pounds average, at $5.60; and 80 to 85-pound yearlings at $5.25 to $5.35; and heavy yearlings down to $5.00 per 100 pounds.

Advice to Mule Shippers.

Holland, Nugent & Maxwell Bros., at the St. Louis National Stock Yards, report the mule trade $10 to $15 per head off from the high time and advise shippers to be careful in buying, as the dealers were loaded up for the time being. The cotton mule trade is quieting, and the principal demand is for large draft mules and miners.

The Most Active Horse Auction.

Horsemen will do well to keep in touch with Holland, Nugent & Maxwell Bros. at the St. Louis National Stock Yards and receive their weekly circulars. The firm sells horses at auction Mondays and Tuesdays every week and five hundred horses a day is a moderate run. Any activity in the trade shows strongly at these auctions.

Top-price Native Cattle.

On March 1st the top price at the St. Louis National Stock Yards for native steers was $6.50 per 100 pounds, paid for twenty head averaging 1,450 pounds, consigned to the market by A. J. Estes, of Boone county, Missouri.

The Market For Hogs.

On March 1st, at the St. Louis National Stock Yards, the best packing grade of hogs sold at $7.05 to $7.15 per 100 pounds. Butchers paid $7.20 to $7.30, and shippers buying lightweight hogs paid $7.00 to $7.35. Large numbers of heavy hogs sold from $6.90 to $7.00. Hogs selling at the top price weighed 190 pounds.

On February 23d it was reported from New York that real fresh eggs were quoted wholesale at 20 cents a dozen, and that the price was the lowest in forty-one years. A year ago they were quoting the highest market in twenty-one years.

Poultry Prices in St. Louis.

Live Poultry quotations at St. Louis, March 1st: Turkeys—Choice dressing, 15c.; thin, small, poor, 9 to 10c. Chickens—Fowls, 12½c.; cocks, 6½c.; spring chickens, round, 15c.; spring chickens, broilers, 19c.; stags, 10c.; capons, weighing eight pounds and over, 15c.; capons, six to seven pounds, 13c.; slips, 11c. Ducks, 16c. Geese, 8c. Guinea chickens, per dozen, $4.00.

The Elgin Butter Quotation.

The last butter quotation at Elgin in the month of February was 25½ cents, against the same price the week previous; 31 cents a year ago; 29 cents two years ago; and 31 cents three years ago.

HORSE AND MULE SALESMEN.

HOLLAND, NUGENT & MAXWELL BROTHERS.

Years of Grand Results

Eckerty, Indiana
May 21, 1909.
Dr. B. J. Kendall Co.,
I have used your remedies with grand results for ten years, and would not be without them.
Wm. H Tuckers.

Kendall's Spavin Cure

Keeps legs sound and trim as no other preparation has ever been known to do. The sure, quick remedy for Spavin, Ringbone, Splint, Curb, Swollen Joints and all Lameness. Equally famed as household remedy. At druggists, $1 a bottle. Get free book, "A Treatise on the Horse," or write to—

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

Bone Spavin

No matter how old the blemish, how lame the horse, or how many doctors have tried and failed, use

Fleming's Spavin and Ringbone Paste

Use it under our guarantee—your money refunded if it doesn't make the horse go sound. Most cases cured by a single 45-minute application—occasionally two required. Cures Bone Spavin, Ringbone and Sidebone, new and old cases alike. Not used on splint, curb or soft bunches. Write for

Fleming's Vest-Pocket Veterinary Adviser

Best book on blemishes, and we send it free. Read it before you treat any kind of lameness in horses. 192 pages, 69 illustrations, durably bound in leatherette.

FLEMING BROS., Chemists, (2)
218 Union Stock Yards, Chicago, Ill.

BUY HARNESS FROM MAKER—SAVE 1/3 TO 1/2

We Pay Freight

You not only save one-third to one-half when you buy Harness from us, but you get the best Harness in the world; made by expert harness makers, in a splendidly equipped shop, from the best materials money can buy. Every Harness built on honor and sold direct with but one small profit between maker and user. Get our big Harness Book before you buy. Free—Send today. H. & M. Harness Shop, 32 Ill. Av., So. St. Joseph, Mo.

FRAZIER'S DISTEMPER CURE

COUGHS AND DISTEMPER

Among horses, colts, mares and stallions cured with one bottle of FRAZIER'S DISTEMPER CURE, or your money refunded. One dose placed in trough or feed will prevent all cases. Influenza, Epizootic, Pinkeye, Catarrhal Fever, Colds, and all forms of Nose and Throat Troubles cured in three to six days. $1.00 bottle holds three 50c. size bottles. At all druggists, or express prepaid. Write for free booklet on the Horse.

BINKLEY MEDICAL CO., - Dept. H, - NAPPANEE, IND.

it costs us 10 cents

When we receive your cream separator order it costs us 10 cents to handle it. You pay the 10 cents in addition to factory cost and factory profit. If an agent takes your order it costs $25.00 to $35.00 on top of all the other costs, profits and expenses. Take your choice—buy where you please, but first send for the Economy Chief Dairy Guide for 1911. It costs you nothing.

Sears, Roebuck and Co.

Chicago, Illinois

Variations in Moisture.

The effort to bring the moisture in butter to an even 16 per cent. and no more has about the same success in Australia that it has in the United States. If a collection of dairy experts tried their hands at it, they would probably vary about 4 per cent., say from 13 to 17; but in general practice by ordinary every-day buttermakers the variation is about 8 per cent., or say from 10 to 18 per cent. At Victoria, in Australia, out of 1,163 samples tested the water content varied from 8 to 19 per cent. One sample had between 8 and 9 per cent. of moisture; ten samples between 9 and 10 per cent.; twenty-six samples between 10 and 11 per cent.; sixty-nine samples between 11 and 12 per cent.; 156 samples between 12 and 13 per cent.; 288 samples between 13 and 14 per cent.; and 314 samples between 14 and 15 per cent.; 209 samples where they were trying to get 15 to 16 per cent.; sixty-three samples between 16 and 17 per cent.; twenty-one samples between 17 to 18 per cent.; and six samples between 18 to 19 per cent. The average one year was 13.44; the next, 13.69; and the next 13.97 per cent.

Pure-bred Mares Pay.

Does it pay to keep pure-bred mares on the farm? Can any better answer be given than the following?

Grant Gaines states in the Live Stock World that he visited a number of draft horse importers and breeders. On a number of these farms mares are kept for the dual purpose of raising colts and doing the farm work. On the farm of A. G. Soderberg, Osco, Ill., is a Clyde mare, twenty-three years old. This mare is now raising a colt and is bred again. During the years Mr. Soderberg has owned this mare she has raised colts which he has sold to the amount of $14,700, and he has three of her offspring left on the farm. One of this mare's stallion colts was sold for $3,500. Henry Lefebure, of Fairfax, Iowa, has a Belgian mare, seventeen years of age, which has brought a foal every year of her life but three, and she is at this time carrying a foal. Mr. Lefebure has sold from this mare's offspring to date $9,400 worth of horses, and has three valuable colts out of her left on the farm. These are only two of the many incidents that might be related. In face of these facts can anyone farming on high-priced land afford to till his soil with a scrub?

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presences adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

NEW POULTRY GUIDE BOOK.

A book that should be in the hands of every man or woman who is really in earnest on the subject of poultry raising and who wants to get out of poultry all the profits that are in it has just been issued by the Cyphers Incubator Company, Buffalo, N. Y. It is their 1911 Big Catalogue and Poultryman's Guide, entitled "Profitable Poultry Raising," a handsome book of 212 pages, which will be mailed free to every reader who will mention this paper.

It illustrates many of the greatest poultry plants of the country, together with pictures of prize-winning birds, farm scenes, showing how poultry can be raised, nurtured, housed and handled to the greatest advantage. It also pictures and describes Cyphers Incubators and Brooders and Cyphers Standard Poultry Specialties. It will be interesting to the farmer, his wife or daughter, who realize how much poultry profits mean to the family income. We advise our readers to send a postal request for this valuable free poultry book at once. Address, the Cyphers Incubator Company, Dept. 56, at the place of business nearest you as follows: Buffalo, N. Y., or at 23 Barclay street, New York, N. Y.; 340 North Clark street, Chicago, Ill.; 12 Canal street, Boston, Mass.; 317 Southwest Boulevard, Kansas City, Mo.; or at 1569 Broadway, Oakland, Calif.

Do You Intend To Abandon Your Farm?

In New England there are hundreds of abandoned farms—abandoned because the soil has been drained of its fertility. Had these farms been properly fertilized they would still be producing bounteous harvests.

New England farms are not the only ones that are being depleted of fertility. There are thousands of other farms which are rapidly approaching the point where further cultivation will be unprofitable unless some means is adopted to renew the fertility of the soil.

If you do not intend to abandon your farm, it will be necessary to sup ply fertilizer to the soil. It is not only necessary to apply manure, but it is absolutely essential that it be applied evenly and in proper quantities.

Manure cannot be spread evenly by hand. Experience has demonstrated that the spreader is the only method by which manure can be applied uniformly.

It is just as necessary to exercise judgment in selecting a spreader as it is on any other subject. There are many spreaders on the market. The I H C spreader has proved its superiority by giving the users years of efficient service. With an I H C spreader you can regulate the distribution of manure so as to make every ounce count. Adjustments can be made to spread a light top-dressing or a heavy covering. This is possible because I H C spreaders have a wide range of feed, and the long, square, chisel-pointed beater teeth thoroughly pulverize the manure that is applied. Wide tires and roller bearings insure light draft.

I H C spreaders are made in three styles—

Cloverleaf—Corn King Kemp 20th Century

Cloverleaf spreaders have endless aprons. Corn King and Kemp 20th Century machines have return aprons. These machines are made with capacity suitable for farms of any size.

Call on the I H C local dealer and let him show you the style and size best suited to your purpose. If you prefer, write direct for catalogue and full particulars.

International Harvester Company of America Chicago U S A
(Incorporated)

I H C Service Bureau

The Bureau is a center where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to every one interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If the questions are sent to the I H C Service Bureau, they receive prompt attention.

Please mention National Farmer and Stock Grower.

A FEW DAIRY NOTES.

At the Ohio Dairy Convention held reccently at Columbus, in the dairy butter contest J. M. Baumiller, of Nutwood, won first with a score of 93.75, and the Winter Dairy of Dawn tied for second with W. L. Garber, of Belleville, with a score of 92.

The Chicago Health Department reported on February 20th that in one week 7,500 cans of milk had been rejected as unfit for food, filtration showing hay, dirt, straw, manure and ashes in shocking amounts. The milk was shipped back to the producers.

Keep the flanks and udders of the cows clipped. It is much easier than to clean the parts before milking. It helps to keep dirt out of the milk. To clip the cows all over once or twice a year will do them good.

The reduced price of butter has caused a decrease in the output of oleomargarine. The oleo product was 6,754,554 pounds in January, 1911; 8,336,602 pounds in December, 1910; and 10,401,344 pounds in November, 1910.

New Zealand butter was recently sold in Vancouver, British Columbia. It could not be sold in San Francisco because it contained half per cent. of a chemical preservative. It found ready sale in Vancouver, and another larger shipment is on the way.

The importation of about a million dollars' worth of cream from Canada, under a mistake in the present law, has had considerable effect in depressing the butter market.

The reduced price of butter caused an opening for 2,200 tubs of butter to be shipped from London to New York in one consignment. The shipment included creamery seconds at 19 to 19½ cents; process seconds at 17 to 17½ seconds; factory butter at 16 to 17 cents. Many people will imagine that export butter consists of creamery extras, but it does not.

It is reported by Consul-General James A. Smith, at Genoa, Italy, that co-operative dairies collecting milk from farmers originated there in the fourteenth and fifteenth centuries. This is the most ancient form of rural co-operation. The first phase was the system "turnario famigliare," or the reciprocal loan of milk; after that they passed to the system "turnario sociale," and only in more recent days is found the real joint enterprise in which each member merely consigns his milk to the association which manufactures it and sells the common produce. The principal produce is cheese.

The New York Produce Review of February 15th said: "From present indications it will be well for our New York cheesemakers to begin to brush up on the making of an export type of cheese. It looks as if a sea voyage will be the only salvation for a good share of the late winter and early spring make."

Orpington Eggs, $2 per sitting. Leghorn eggs, 13 to a sitting; other varieties, 15 to a sitting. Leghorn eggs, $6 per 100; all other varieties $10 per 100. Large White Pekin Duck Eggs $2 for 10 Eggs. This is a rare chance to get a start of extra fine stock. Send Post Office order on St. Louis and have your orders booked early. Write for our prices on Old Trusty and Buckeye Incubators. Freight paid.
W. F. CHAMBERLAIN, (*The Perfect Chick Feed Man*)
KIRKWOOD, St. Louis County, MO.

Please mention Nat. Farmer and Stock Grower.

Exercising Laying Hens to Get Eggs.

"Regular exercise is of first importance for laying fowls," says Prof. J. G. Halpin, head of the Poultry Department of the College of Agriculture of the University of Wisconsin. "Regular exercise increases bodily vigor and vitality and keeps the flock in a healthy condition. In addition it aids in maintaining a vigorous appetite, which assures the use of food with maximum returns.

"The most effective method of compelling hens to take exercise is to sprinkle grain in fresh, clean litter and thereby force the birds to scratch for their food. Abundance of litter is necessary, and a lot of hard scratching to get a small amount of grain will do the birds no harm. On warm, dry winter days clear a space on the south side of the hennery, place some clean litter on the ground and mix the grain with this. The exercise out of doors will do them great good and result in larger production.

"Following the day on which they have had plenty of exercise scratching for food, the hens should be liberally fed with a mash, so that they go upon the perch at night with full crops. A hungry hen cannot lay many eggs, but she should not be stuffed so early in the day that she loses interest in working for her living."

Notes on Poultry Diseases.

Little is known as yet about poultry diseases. They have not been classified and studied as have human diseases or even the diseases of other farm animals. Much information of a doubtful character is rife regarding them, but nothing or little of a scientific character. Our ignorance about poultry diseases makes us unable to hedge against them.

One Experiment Station at least is recognizing the importance of poultry diseases and is preparing to study them methodically and scientifically. The Rhode Island Station has built a hospital for the study of poultry diseases, and we may expect much new truth to be brought ont by its work. This poultry hospital is the first of its kind in this country and possibly in the world.

It is always dangerous to keep poultry together in large flocks on account of the possible spread of contagious disease. The ordinary man is not equipped to so carefully protect his fowls that he can keep two hundred or more birds in a flock. At the Maine Station large flocks are kept together, but the protection against disease is as good as it is possible to make it. On the other hand, many a poultry raiser has suffered immense losses from trying to make one piece of ground support too many fowls.

It is the same with poultry diseases as with human diseases—they are spread more easily where there is overcrowding. Therefore, do not overcrowd. It is the safest for the ordinary man to have his fowls in small flocks, so if disease starts in one flock it may be checked by quarantining the flock.

There is no doubt that lice are great spreaders of poultry diseases. They act like the lancets used in making subcutaneous injections. They make a hole in the skin of the fowl, and, while trying to get blood for their food, at the same time infect the wound with disease germs brought from sick fowls. Therefore, kill the lice, or do not let them come in the first place.

When you buy new fowls to put into your flock, see that you do not import disease with them. It is safest to keep the new fowls by themselves till you can see whether or not they are affected with any contagious disease. Thorough washing of the new birds, as if to prepare them for a show, will decrease the chances of importing disease.

The feeding of meat and ground bone is a help in the prevention of disease. This food acts as a stimulus and makes the birds more resistant. At the Cornell Station geese were fed, some on a ration having a good proportion of meat and some on a ration having no meat. The group of birds that had meat vere very vigorous, and most of them grew to maturity, while with the other birds the usual number succumbed to poultry diseases before they became mature.

The feeding of too much whole grain in the end of winter makes way for indigestion, which resembles cholera in effect, and annually carries off millions of fowls. It differs from cholera largely in being non-contagious. Give the fowls either soft food once a day or chopped cabbage, turnips and carrots, which will relieve the strain on the digestive organs.

Poultry Notes.

Mr. F. B. Chamberlain, of Kirkwood, Mo., the original chick feed man, is a thorough poultry expert. He keeps White and Brown Leghorns, and in order to become acquainted with all the progressive farmers and poultrymen will sell two settings of eggs for one dollar. This enables him to send his chick-feed catalogue. He has other breeds, as shown in the advertisement.

In California, a man, with only two and one-half acres, had 890 hens and made a clear profit of $1,048 in the year, figuring on the value of egg production alone. He sold his eggs at 29 cents a dozen, and his hens averaged 120 eggs a year. He purchased eggs for hatching and raised 580 pullets. His cost for oil for incubators was only $4.50. We get the facts from the Petaluma Poultry Journal.

Automatic fountains for poultry and other stock are cleanly, lasting, water-purifying, and represent up-to-date methods, assuring greater benefits from the condition of stock and doing more than any other agency to keep them healthy. Automatic fountains are fully described in a free booklet issued by Gedge Bros. Iron and Roofing Co., 2442 Fletcher street, Anderson, Indiana.

Mr. A. B. Lampert, who is advertising Rhode Island Reds and Indian Runner ducks in this paper, is an Illinois poultry farmer who went to Oklahoma. He is succeeding well in his new field and has stock and eggs for sale that are a credit to his breeding.

Frank Wells, of DuQuoin, Ill., has sold his poultry largely through advertising in The National Farmer and Stock Grower. His specialties are White Wyandottes, Barred Plymouth Rocks and S. C. Rhode Island Reds. His stock gives satisfaction.

Anyone who may be hesitating in regard to using incubators for hatching eggs in the effort to conduct poultry raising on a paying basis is reminded that some manufacturers are making and selling 30,000 to 75,000 incubators a year. The increase in successful poultry farming is entirely due to the use of mechanical incubators and brooders.

The Egg Exchange at Petaluma, California, is an organization among producers. It is based on the co-operative system. The eggs are graded Nos. 1, 2 and 3. All eggs passing into No. 1 grade must be spotlessly clean and weigh 1 5-6 ounces. This makes one dozen weigh 22 ounces. No. 2 grade are smaller eggs, while No. 3 are culls and cracked eggs and are used locally. The difference in price between grades varies considerably from five cents to twenty cents a dozen. The average price for all eggs, including the washed ones, in 1909, was 27¾ cents.

The New York Produce Review in the middle of February mentions the arrival of a coop of incubator broilers, twenty-three chickens to the coop, weighing thirty pounds Here you have the weight of early broilers.

During the middle of February fresh eggs, top grade, sold wholesale at 18½ to 19 cents a dozen. At the same time cold-storage eggs were selling largely at 10 to 11 cents, with the best at 12 cents. These cold-storage eggs must have lost the holders 5 to 8 cents a dozen.

The cranks that are continually harping on cold storage ought to go into convention to find something that has been more beneficial to the human race. If it were not for cold storage New York City would have neither fruits, vegetables, eggs, poultry or meats one-half the year.

Pull Your Stumps FREE

For 30 Days with this Hercules All-Steel Puller

SEE here how the Hercules pulls out big stumps, roots and all. Don't have stumpy fields—loafer land doesn't pay. This Hercules Genuine All-Steel Stump Puller is

Guaranteed For 3 Years

against breakage—flaw or no flaw. Test it on your place for 30 days at our risk. Try it on stumps or green trees.

Triple Power

"Triple power" attachment means a third greater pulling capacity and saves strain on team and on cables. Three machines in one—single, double and triple power. Can be changed in a minute right in the field from one power to the other by one man. Nothing like it in the world. The Hercules is the only stump puller guaranteed for three years. Only one with Double Safety Ratchets. Hitch on to any stump and it is bound to come. Also pulls largest hedge rows and green trees Don't risk costly and dangerous dynamite. Don't risk a cast iron puller. Write us at once on a postal for our

Special Price Offer

We have a special price proposition to the first man we sell to in new sections. Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Take No Chances.

What is the use in taking chances on buying farm implements? They should have the unqualified endorsement not only of users who know a good tool when they use it, but they should be so warranted by the makers that the purchaser runs no risks. Buckeye Cultivators have been on the market for more than half a century; the line is the most complete on the market; they are used by the most successful farmers in every land; they are gaining in popularity every year. Isn't this a sure indication that they are built right; that they do the best possible work with the least expenditure of time and labor; that they require very little for repairs, and that they are made by men who know how? Not only is that true, but they are made by The American Seeding-Machine Co., Incorporated, Springfield, Ohio, who place such a strong warranty on them that no risk whatever is taken by the purchaser. Write to them for Buckeye Cultivator pamphlets and then go to your local dealer and insist on seeing Buckeye Cultivators. Should he be unwilling to supply you with a Buckeye, tell the makers about it and they will see that you get what you want.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid**, one that received the gold medal at the National Rose Society; the flowers are rich velvety red. Another one is **The Bride**, one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care; the flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose; the flowers are very large and it blooms profusely. **Champion of the World** is a rich ivory pink, and without it no garden selection is complete; it is unequaled for size of flower, fragrance or beauty. **Crimson Rambler**, the last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy, ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Careful of the Chicks.

From the Kansas Industrialist of the Agricultural College we get the following:

"In the spring, when the weather is warm and damp, you are quite likely to find lice on your poultry, especially if your hen-houses have not been kept clean. Lice are very destructive to young chickens and should be killed at once. If you adopt the following method you may kill the lice at once and probably keep them from returning. Of course, the first thing to do is to clean the hen-house and spray it with kerosene emulsion. The older fowls should have a dust bath, and the chickens should be greased with carbolated vasolene. To keep the lice from returning you should provide a dust wallow for the flock.

"Here is the formula for making the kerosene emulsion:

Kerosene	2 gallons.
Water	1 gallon.
Soap	½ pound.

"Cut soap finely and dissolve in boiling water. While boiling, but away from the fire, add the kerosene. Stir rapidly. The emulsion will have the consistency of rich cream. When ready to use, dilute by using nine gallons of water to one gallon of emulsion.

A dust bath is made with this mixture:

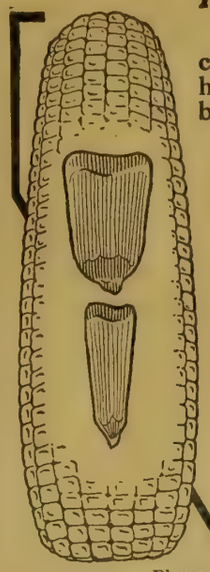
Kerosene	¼ pint.
Gasolene	¾ pint.
Plaster of Paris	2½ pounds.

"Mix kerosene and gasolene together and stir slowly and thoroughly into the Plaster of Paris. When thoroughly mixed, sift through a common door screen to remove all lumps. This dust should be shaken into the feathers of the fowl, especially around the base of the tail and under the wings.

"A dust wallow is made by mixing equal parts of fine coal ashes and land plaster. Wood ashes should not be used, as they will irritate the tender skin of the fowls. A setting hen should be thoroughly dusted before being placed on her nest and a day or two before hatching her brood."

Begin with Well-Bred Seed

Raise it yourself or buy it on the cob



Then remember that the best-bred corn can produce only nubbins if it does not have food. Supplement the clover sod and barnyard manure with 50 to 100 pounds of muriate of

POTASH

and 200 to 300 pounds acid phosphate per acre, broadcasted before harrowing.

It will pay to also drill in with the seed 75 to 100 pounds per acre of Kainit to keep away cut-worms and root-lice. In this way *Potash Pays.*

Write us for prices.

THE OLD

Which Way is Best?

THE NEW

The hard, irksome sweaty labor with a hand shear; the tired, aching swollen wrist of the shearer; the maimed and mangled sheep from it; the uneven shearing, cutting the animal in some places and leaving an inch of wool in others; the fleece in shreds and tatters and spoiled with second cuts, **OR** the easy turning, fast, even shearing of a

Stewart No. 9 Ball Bearing Machine

that anyone can do; the fleece taken off smoothly and quickly in one unbroken blanket, with every fiber at its longest; with not a scratch of any kind to the sheep and with all the wool secured, enough more, at the present price of wool to bring you from 15c to 40c more from each sheep? That's what you can do with this Stewart No. 9 Machine. It requires no expert labor to use a Stewart Shearing Machine. Any of the help can do it. The machine, all complete, with ball bearings in every joint and having a ball bearing shearing head, and including four combs and four cutters, costs only **$11.50**

This machine turns easier and shears faster than any other shearing machine we have ever produced. It is a big advance over anything else on the market. Get one from your dealer or send $2 and we will ship C O D. for the balance. Write today for new 1911 catalogue and our free copyrighted book, "Instructions on Shearing Sheep" by the leading American expert.

(son and successor to the late H. C. Ezell). Nashville, Tenn., Sta. B, R. F. D. No. 7.

BLOODED STOCK NOTES.

Mr. H. H. Hoffmann, breeder of Duroc-Jersey swine, Route 1, Belleville, Ill., has a card in this paper. He has the right kind of hogs for large litters and vigorous growing stock.

Mr. A. F. Siefker, of Defiance, Mo., breeder of Poland-China swine, has a card in this paper, offering pigs with guaranteed quality and registration. He also has a magnificent strain of Plymouth Rock fowls from show birds, and, considering all things, is offering eggs at very reasonable prices.

Mr. H. C. Myers, proprietor of Little River Stock Farm, Hopkinsville, Ky., has nine jacks for sale of different ages. He is one of the oldest and best breeders of jack stock in Kentucky.

Breeders' felt used in raising little chicks is not listed as it ought to be in every poultry supply catalogue, but it can be bought by the yard of Hayne-Surridge Co., 1017 Lucas avenue, St. Louis, Mo.

Henry Steinmesch, of St. Louis, Mo., is one of the foremost poultrymen in the United States; has been a breeder for many years, and won many prizes. His book, advertised on page 26, is eighty pages of clear and concise information. It is free, but it is very valuable. Write for it. Address, Henry Steinmesch, 224 Steinmesch Building, St. Louis Mo.

A pure-bred herd of eighty head of registered Hereford cattle has just been sold by Mr. V. Weiss, of Beaumont, Texas, to Mr. H. H. Reeder, ranch owner of Coahuila and Tamaulipas, in Old Mexico. This is a fine herd of Hereford cattle and said to be the first registered Hereford herd to cross the Rio Grande river. Mr. Weiss raised most of the cattle he sold, and is one of the leading cattle breeders of Texas.

THE LAND INTEREST.

At St. Paul, Minn., February 4th, Carlos N. Goynton and the Patterson Land Company purchased from Senator Joseph M. Hackney 50,000 acres of raw prairie lands in the Eastern Missouri slope country of Central North Dakota for $625,000. As part payment of the purchase price Senator Hackney acquires the office building known as "The Brokerage," which was built by the Patterson Land Company three years ago.

A syndicate headed by George E. Roberts, former Director of the United States Mint, has closed a contract with the state of Wyoming to take over the Wyoming central irrigation project. Over 250,000 acres will be reclaimed in Wyoming.

On February 5th it was reported from Austin, Texas, that the M. A. Taylor estate had sold to the A. Denton Colony Company 16,000 acres of land near Asherton, in South Texas. Mr. Denton says he will construct a railroad through the property, place the land under irrigation, erect a canning factory and make other improvements. Asherton is in Dimmitt county, not far from the Rio Grande.

It is reported on February 11th that D. S. Riee and I. F. Peters, of Memphis, Tenn., and W. A. Johnson, of Ellendale Tenn., purchased from John McWilliams, of Odell, Ill., 7,500 acres of rice lands in Arkansas county, Ark., for a consideration of $300,000. It is announced the purpose of the new owners of the property to immediately equip it with a $35,000 pumping station and proceed to develop the property by extensive rice production.

HORSE AND MULE ITEMS.

From the New York World: "Prince Greenlander, 2:09½, a fast but erratic trotter, owned a few years ago by F. G. Schmidt, of the New York Driving Club, won a dash race of five miles on the ice at Montreal. He covered the distance in 13:05, which is probably the best time on record on ice."

Springtime is clip time, both in the city and on the farm. Horses that are clipped dry off fast at night, which is to be preferred to standing in a heavy, wet coat of hair.

It is reported that the British breeders are considering the advisability of breeding the surplus hair off the legs of draft horses. The heavy hair has always been considered evidence of strength and stamina, but the clean foot is more in fashion nowadays; furthermore, they are easier to groom. Some day we may have the Clydesdale with the foot and lower leg of the French Draft. The Shires have already gone after the dapple-gray color of the Percheron.

Trumans' Pioneer Stud Farm has just received an extraordinarily fine lot of mares and stallions. The mares were sold at the auction, but the stallions are catalogued and in each case breeding and description are given. Anyone desirous of purchasing superb draft stallions should write to J. G Truman, Bushnell, Ill., for the 1911 Stallion Catalogue.

It is reported that Capt. Edward B. Cassatt, of Chesterbrook Farm, Berwin, Pa., and August Belmont, of New York and Kentucky, have each tendered three stallions for government service in the stud to raise horses for the army. One of the stallions offered by Mr. Belmont is the famous thoroughbred Henry of Navarre. It is also stated that Mr. Thomas W. Lawson will offer his trotting stallion Dare Devil, 2:09, for the same purpose.

From Sedalia, Mo., on February 16th, it was reported that Gustin Smith had sold a span of mules for $625 during the week, and that Lee Warren had received $700 for a team of sixteen-hand mules, weighing about 2,700 pounds, which price was paid by A. W. Cooper, of Shawnee, Okla. This is the high-priced record for mules in Pettis county, Missouri.

The latest importation of Shire horses by Trumans' Pioneer Stud Farm includes a large number of magnificent grays. Mr. J. H. Truman purchased them at the London Shire Horse Show, where he obtained several extraordinary prize winners. Any reader of this paper can get a catalogue by writing to J. G. Truman, Manager, Bushnell, Ill.

FARM AND RANCH LANDS.

ARKANSAS.—The new corn country and best alfalfa lands in Little River county; 1,000 acres Red River land; finest stock and grain farm in this section at a bargain. Hogs and cattle raised here cheaper than elsewhere. Address, **W. R. Cavett,** Shreveport, La.

FLORIDA.—50,000 acres of moderately level land in Northwest Florida. Railroad runs through it and sixty miles from deep water. A splendid site for colonization. Price, six dollars ($6.00) per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSISSIPPI.—25,000 acres on two railroads, in Jackson county, Mississippi. Price six dollars ($6.00) per acre; will cut up and sell at $25.00. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

MISSOURI.—385 acres of rich, well-drained bottom land, excellent for corn, wheat, timothy, clover, alfalfa, fruits and vegetables. Price, $70 per acre. **T. H. Jones,** 513 Roe Bldg., St. Louis, Mo.

The Call of the Southeast

To the man looking for a home, where productive lands, favorable climate and abundant rainfall make the best paying farm locations in America the Southeast is now the unequalled section. Land from $5.00 to $40.00 an acre near to the heart of the country and close to the best markets. The largest returns from alfalfa and other hay, wheat, corn and all truck crops. Lands unsurpassed for stock and poultry raising, and dairying. For fruit growing no region is more profitable. The Southeast has opportunities for every kind of farming. **The Southern Railway** will help you to find the desired location. Send for publications to.

M. V. RICHARDS
Land and Industrial Agent, Southern Railway
1344 Pennsylvania Ave., Washington, D.C.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural; balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

VIRGINIA FARMS
Offer best opportunity for land buyers and the best place to live. Mild winters, cheap land, sunshine. Grow all crops. Produce best-flavored apples. Cattle, hog raising, dairying and poultry raising profitable. Near 40,000,000 consumers. Get top prices. Write for information. **George Koiner,** Commissioner of Agriculture, Richmond, Va.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

SELL YOUR PROPERTY. New plan. Write for particulars. **C. C. Shepard, Minneapolis, Minn.**

WE GUARANTEE TO SELL YOUR FARM FOR CASH, no matter where located, within thirty days. Commission basis—no retaining fee—we get the money. Address,
PIONEER LAND CO., 6 Central Block, Decatur, Illinois.

FARMS WANTED! Don't pay commissions. We find you direct buyers. Write describing property, naming lowest price. We help buyers locate desirable properties FREE. **AMERICAN INVESTMENT ASSOCIATION, 55 Palace, Minneapolis, Minn.**

The Farmer's Son's Great Opportunity

Why wait for the old farm to become your inheritance? Begin now to prepare for your future prosperity and independence. A great opportunity awaits you in Manitoba, Saskatchewan or Alberta, where you can secure a Free Homestead or buy land at reasonable prices.

Now's the Time

—not a year from now, when land will be higher. The profits secured from the **abundant crops of Wheat, Oats and Barley,** as well as cattle raising, are causing a steady advance in price. Government returns show that the **number of settlers in Western Canada from the U. S. was 60 per cent larger in 1910 than the previous year.**

Many farmers have paid for their land out of the proceeds of one crop.

Free Homesteads of 160 acres and pre-emptions of 160 acres at $3.00 an acre. Splendid climate, good schools, excellent railway facilities, low freight rates; wood, water and lumber easily obtained.

For pamphlet "Last Best West," particulars as to locations and low settlers' rate, apply to Sup't Immig., Ottawa, Can., or to Can. Gov. Agt. Canadian Government Agent, 125 West 9th St., Kansas City, Mo.
C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

(55)

The Single-ear Test.

Every ear of seed corn required for planting an acre can be tested at the trivial cost of from three to ten cents an acre. The failure of the planted kernels from a single ear to germinate will mean the loss in the prospective crop, of approximately five bushels of corn, worth $2.50. It would seem then that no further argument should be required to convince any intelligent farmer of the desirability of testing every ear before planting.

Fifteen to twenty ears of corn will plant an acre. The failure of the kernels from one of these ears to grow means then the loss of not less than one-twentieth, or five per cent., of the prospective crop. As well plant 500 small stones as 500 kernels from an ear whose vitality has departed. The usual method of testing seed is to take 100 kernels from a sack of shelled corn and place them for germination between a couple of wet cloths, sandwiched between two plates, and kept at the proper temperature. If all the kernels germinate,it is safe to plant the seed without further testing. But if only 95 to 96 per cent. germinate, it is best to put aside the sack of shelled corn for feeding cattle and to apply the single-ear test to a number of selected ears. Then you can plant your acres with corn, not a single ear of which has germinated less than 100 per cent.; and if you fail to get a larger crop than ever before, under old methods, it certainly will not be because of inferior seed.

The apparatus necessary for the single-ear test on a large scale is a box, say forty inches square, three to four inches deep, filled with sand or sawdust and a wet cloth. Such a box will afford room enough to test 400 ears, or corn enough to plant twenty acres. Four thousand ears—enough for 200 acres—have been tested, in actual farm work, by one man in thirty-six hours.—Extension Department, Agricultural College, St. Paul, Minnesota.

Our Seed Corn Premiums.

The seed corn premiums offered by The National Farmer and Stock Grower, crop of 1911, are advertised on page 2. We are furnishing subscribers small quantities of seed corn grown by famous corn breeders who have won many prizes. Any farmer may derive pleasure and profit by planting this seed, harvesting the corn and exhibiting selected ears of corn at the shows. There is little to pay, nothing to lose, and much to gain. We have paid many premiums, the largest being seventy-five dollars for ten ears that won a first and championship prize at the Louisiana State Fair. Others have won lesser prizes, and some did not exhibit at all; in every instance they improved their knowledge of corn growing and obtained better crops than heretofore. Our supply of champion-grown seed corn is limited, and we certainly advise our patrons to secure their supply early. We do not furnish anyone over two pounds of seed corn, and later in the season may have to place the limit at one pound. See page 2.

Write to Gordon-Van Tine Co., 2484 Case street, Davenport, Iowa, to send the Free Construction Books advertised on page 32. The construction of farm buildings is a simple matter when these books are in the farmer's hands. There are 5,000 bargains to be had, and each one is worth studying.

WHY EXPERIMENT?

IT MAY BE NECESSARY TO EXPERIMENT TO FIND OUT SOME THINGS--BUT NOT SO WITH THE SELECTION OF YOUR COMMISSION FIRM.

WHEN YOU CAN JUST AS WELL CONSIGN TO THE FIRM WHOSE NAME FOR TWENTY-FIVE YEARS HAS STOOD FOR TOP MARKET PRICES AND ABSOLUTE SECURITY, WHAT'S THE USE OF TAKING CHANCES?

IT'S BETTER TO BE SAFE THAN SORRY, AND IT'S BETTER TO SHIP TO CLAY, ROBINSON & CO. THAN TO WISH YOU HAD.

When The Stomach Stops

Working Properly, Because There Is Wind In It, Use Stuart's Dyspepsia Tablets to Set It Going Again.

A Trial Package Free.

The doctors call it flatulency, but unprofessional folks know it as "wind on the stomach," and a most distressing state of things it is. It is a serious condition of this great motor organ. Always annoying and painful in the extreme, at times often leading to bad and fatal results. The stomach embarrassed and hampered with wind, cannot take care of its food properly and indigestion follows, and this has a train too appalling to enumerate. The entire system is implicated—made an active or passive factor in this trouble and life soon becomes a questionable boon.

All this is explained in doctor books how undigested food causes gases by fermentation and fomentation in which process some essential fluids are destroyed—burnt up—wasted by chemical action, followed by defective nutrition and the distribution through the alimentary tract of chemically wrong elements, and as a consequence the stomach and entire system is starved. Plenty of food, you see, but spoilt in preparation and worse than worthless.

A deranged stomach is the epitome of evil; nothing too bad to emanate from it, but the gas it generates is probably its worst primary effect and the only way to do away with this is to remove the cause. Stuart's Dyspepsia Tablets go to the root of this trouble. They attack the gas-making foods and render them harmless. Flatulency or wind on the stomach simply cannot exist where these powerful and wonderworking little tablets are in evidence.

They were made for this very purpose to attack gas making foods and convert them into proper nutriment. This is their province and office. A whole book could be written about them and then not all told that might be told with profit to sufferers from this painful disease, dyspepsia. It would mention the years of patient and expensive experiment in effort to arrive at this result—of failures innumerable and at last success. It would make mention of the different stomach correctives that enter into this tablet and make it faithfully represent all.

Stuart's Dyspepsia Tablets are not alone intended for the sick, but well folks as well, for the person who craves hearty foods and wants to eat heartily and run no risk of bad effects, they act like a charm and make eating and digestion a delight and pleasure. They keep the stomach active and energetic and able and willing to do extra work without special labor or effort. Don't forget this. Well people are often neglected, but the Stuart Dyspepsia Tablets have them in mind.

A free trial package will be sent anyone who wants to know just what they are, how they look and taste, before beginning treatment with them. After this go to the drug store for them; everywhere, here or at home they are 50 cents a box, and by getting them at home you will save time and postage. Your doctor will prescribe them; they say there are 40,000 doctors using them, but when you know what is the matter with yourself, why go to the expense of a prescription? For free trial package address F. A. Stuart Co., 253 Stuart Building, Marshall, Michigan.

A Small Lot of Chickens.

Mrs. A. J. C. Lowe made this report to the Observer of Pleasanton, Kas., on the profits of poultry raising. She has principally the White Rose Comb Leghorns. She kept account of the business last year and when the books were balanced had sold $205 worth of eggs and poultry, besides having plenty of eggs and chickens to eat. They had 130 hens to start with and have a few more at this time. The feed consumed by the chickens was estimated at $50, leaving a profit of $155 on an investment of 130 hens that originally cost about $52. Or, in other words, Mrs. Lowe had a nice little income for the trouble of handling the chickens.

The Mule and the Grizzly.

The following nature-faking story is from the Associated Magazines:

"In the top over the Sierra Nevadas a Californian took with him not only his favorite horse but a mule named Billy. Billy was large iron-gray mule of the pack variety, and had more than once made the trip.

"On the second day in the mountains the owner tethered Billy to a tree, allowing him about twenty feet range where there was good food, and then took a seat on a fallen tree not far away to eat his own lunch. He had finished his meal and was half dozing, when suddenly the mule feared and snorted loudly. His owner sprang to his feet and looked about.

"Not ten feet off stood a huge grizzly bear, evidently with designs on the owner of the mule. That individual rushed for the nearest tree and made good time in climbing it. He was safe for the nonce; but how about Billy? How could the tethered mule defend himself?

"To his owner's surprise, Billy dropped his head after a moment and resumed feeding. As for the bear, he stood still for several minutes, his eyes wandering from the man in the tree to Billy. The mule's composed demeanor evidently puzzled him.

"By and by the grizzly started to make a circuit of the tree to which the mule was tethered. Billy continued to nibble grass; but kept an eye on the enemy's movements.. The bear emitted a series of deep growls, then opened his great mouth and disclosed two rows of ugly teeth.

"Slowly the great creature advanced upon the mule. Billy still continued to graze, his back towards the bear. Nearer came the grizzly, and still nearer. The mule stopped feeding. From his perch the Californian watched the scene with breathless interest. He felt sorry for his mule.

"Finally the bear stopped, rose on his hind quarters and prepared to strike. At that moment the mule, at whose stupidity his owner had wondered, sprang forward, and the grizzly's paws struck empty air.

"Then the man in the tree saw a gray form double itself into a ball and bound upward. It was the mule's turn! Out of that ball flew two iron-shod hoofs, which shot back and forth with the regularity of piston-rods, with a thump, thump, thump against the body of the grizzly, which was completely off his guard.

"He was hit all over, on his head, on his shoulder, on his side, on his back, by those pile-driving hind feet. He fell in one direction, then in another, seeming utterly incapable of getting away; and when Billy stopped kicking the breath of life was gone from the bear's body.

"The mule had not a hair harmed, apparently, and after resting a bit, returned quietly to his feeding."

To Buy Groceries Right.

On page 7 will be found an advertisement of Montgomery Ward & Co., relating to their pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

HEAVY SPRING WORK MEANS SORE-SHOULDERED HORSES.

Unless you take greatest care with your horses, sore shoulders are inevitable. It is well to have some good remedy on hand, so you may treat promptly. Probably there is nothing better to be had for this purpose than Bickmore's Gall Cure. It is the old reliable remedy which is put to the test year after year by thousands of horse owners. And it has the reputation of never being found wanting. The famous old remedy cures galls, cuts and sore shoulders while the horse works. That makes it doubly valuable. The fact that it is to be found on sale with dealers all over the United States and Canada shows that its use is nearly universal. In order to introduce it with horse owners who have never used it, a free sample is being sent out by the manufacturers. Enclose 5c. in stamps to pay postage and packing and send to Bickmore Gall Cure Company, Box 48 R, Old Town, Maine, and the sample box will be sent you by return mail.

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of **woman's ailments**, and I want to tell you **all about it**—just how to use it yourself—**right at home** without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—**let me prove it to you**, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so **quickly** and **surely** cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with **any form of female weakness or diseases so common to women.**

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only **a few cents a week.** I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to **prove** my faith by sending out these **50-cent boxes free.** So, dear reader, irrespective of your past experience, write to me **at once—today**—and I will send you the treatment **entirely free** by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the **very best test** of anything is a **personal trial** of it, and I know a 50-cent box of Balm of Figs Comcound will **convince you** of its merits. Nothing is **so convincing** as the **actual test** of the article itself. Will you give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a **50-cent box of this remedy absolutely free.** Address,

MRS. HARRIET M. RICHARDS, Box C 223, JOLIET, ILLINOIS

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. **Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.**

Write at once to the Yonkerman Consumption Remedy Co., 4622 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

The District of Columbia has 214 farms, averaging about twenty-eight acres in extent. The district decreased fifty-five farms since the last census, and the farm acreage decreased from 8,000 acres in 1900 to 6,000 acres in 1910. Of the total, 202 are operated by white farmers and twelve by colored farmers. Fifty-five per cent. of the farms are conducted by owners; thirty-nine per cent. by tenants, and six per cent. by managers.

Elkhart Vehicles and Harness

have a world-wide reputation for high quality and our prices have made them famous.

THIRTY-EIGHT YEARS'

experience selling to the consumer means success. We ship for examination, **guaranteeing** safe delivery, satisfaction and to save you money.

Pimples Off In 5 Days

The New Calcium Sulphide Treatment Does Wonders to Every Kind of Skin Eruption.

Trial Package Sent Free To Prove It.

You don't want to wait forever and a day to get rid of your pimples or other skin eruptions. You want to get rid of them right now. Next week you may want to go somewhere where you wouldn't like to have to take the pimples along.

You can get rid of them just in time by taking Stuart's Calcium Wafers.

These wonderful little workers have cured bad boils in three days, and some of the worst cases of skin disease in a week.

They contain as their main ingredient the most thorough, quick and effective blood cleanser known, calcium sulphide.

Remember this, too, that most pimple treatments reek with poison. And they are miserably slow besides.

Stuart's Calcium Wafers have not a particle of poison in them. They are free from mercury, biting drugs or venomous opiates. This is absolutely guaranteed. They cannot do any harm, but they always do good—good that you can see in the mirror before your own eyes a few days after.

Don't be any longer humiliated by having a splotchy face. Don't have strangers stare at you, or allow your friends to be ashamed of you because of your face.

Your blood makes you what you are. The men and women who forge ahead are those with pure blood and pure faces.

Stuart's Calcium Wafers will make you happy because your face will be a welcome sight not only to yourself when you look into the glass, but to everybody else who knows you and talks with you.

We want to prove to you that Stuart's Calcium Wafers are beyond doubt the best and quickest blood and skin purifier in the world—so we will send you a free sample as soon as we get your name and address. Send for it today, and then when you have tried the sample you will not rest contented until you have bought a 50c. box at your druggists.

Send us your name and address today and we will at once send you by mail a sample package, free. Address, F. A. Stuart Co., 404 Stuart Bldg., Marshall, Mich.

A Change in Attitude Towards Nitrate of Soda.

Five years ago it was very unusual to find a paper recommending the use of Nitrate of Soda alone as a top dressing for crops.

To-day an examination of some two hundred farm papers will show hardy one that does not somewhere in its columns tell of the value of Nitrate as a plant food; either as a supplement to other fertilizers or alone as a top dressing. Dealers are advertising Nitrate, farm journal correspondents tell of greatly-increased yields due to its use, there are articles in the reading pages on the subject, and Experiment Station Bulletins are often published on the results of Nitrate of Soda experiments.

To-day the consumption of Nitrate is almost three times what it was ten years ago. Then difficult to procure, it is now offered for sale by hundreds of dealers all over the country.

This change in attitude and this greatly-increased consumption of Nitrate is due to the fact that the press, the dealers, the farmers, have learned that the use of Nitrate is necessary for the highest development and yield of many crops, and that Nitrate is not pushed in a big scheme for commercial profit.

The Nitrate Propaganda has proved and is still proving to the farmers that Nitrate is a paying proposition. Its advertising has always been educative. It has conducted experiments and secured the results of experiments made by others and edited and published them in the form of handy books, teeming with authoritative information on the care, cultivation and fertilization of plants, fruits and crops of all kinds. These books are sent out free to all who apply to Dr. W. S. Myers, 71 Nassau street, New York, and will prove a valuable addition to any farm library.

The Nitrate Propaganda has never sold a pound of Nitrate, but all its advertising and other efforts have been directed towards the farmer, showing him the value of Nitrate and the most effective way to use it. That papers now devote space to the subject; that dealers advertise the fact that they carry Nitrate; that the importation has trebled, shows how well this plan worked out, how sure American farmers are to know a good thing.

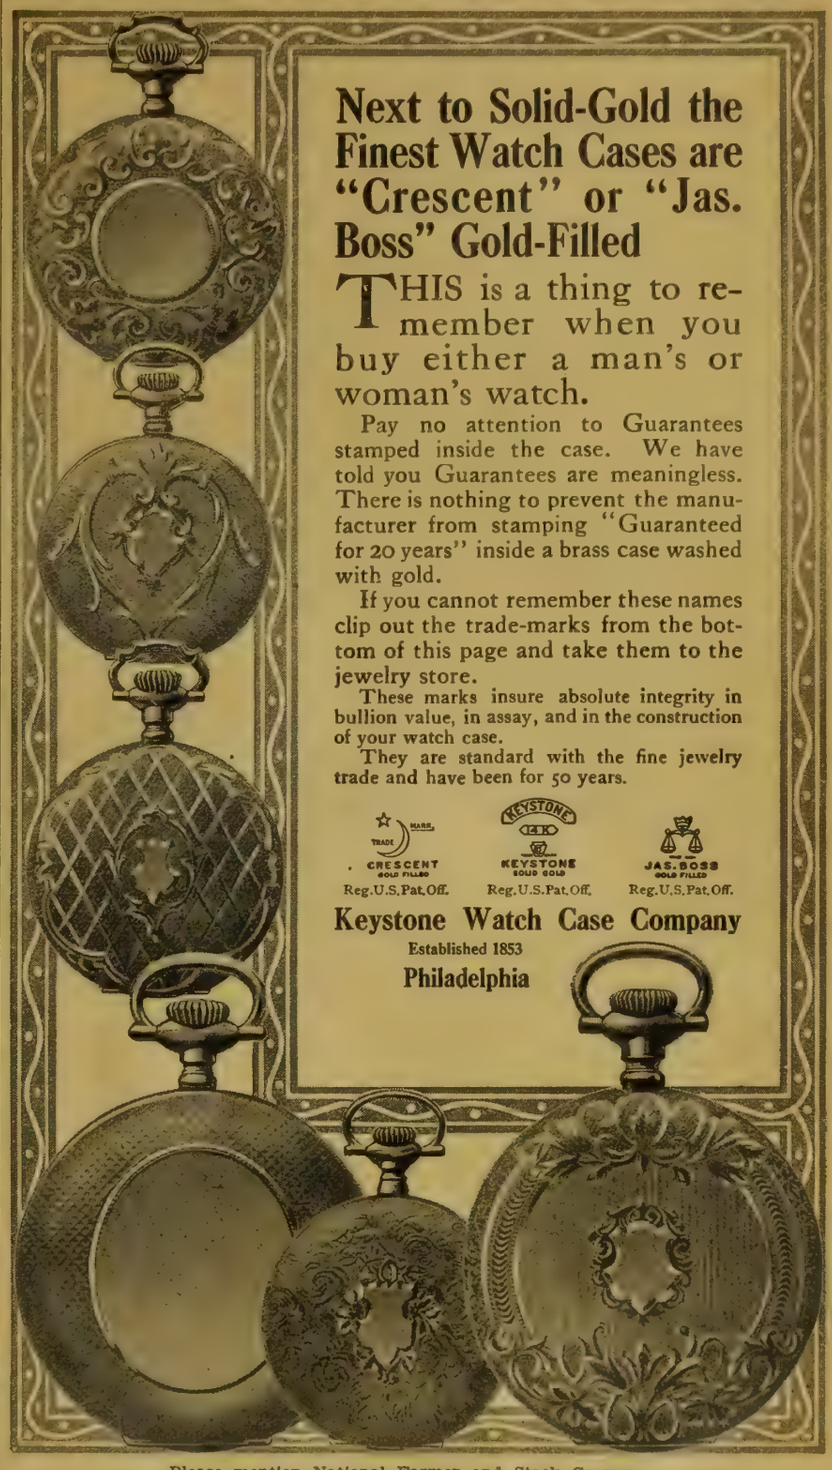
CLORE'S WHITE CORN.

What a School Boy Did in Georgia.

In the spring of the year 1909, Louie Brown, a school boy at Belmont Farm, Smyrna, Ga., received a pound of L. B. Clore's Johnson County White Corn as a subscription premium with The National Farmer and Stock Grower. With this seed in the same year he raised a good stand of corn and won a $50 first prize at the Georgia State Fair, besides winning a $25 first prize from The National Farmer and Stock Grower. See our Corn Premium Offers on page 2.

Growing of Summer Apples.

On nearly every farm summer apples have a place since very early days, and varieties have been developed, extending the season of apple production over the entire summer as well as autumn. While as a rule this fruit has been grown for family consumption, the surplus has found its way to market. The marked decline in the production of peaches within the past few years has brought about a considerable extension of the early-apple industry on a commercial scale, which extension has been most marked in the Middle Atlantic States, where especially advantageous transportation routes, both rail and water, and the proximity of large markets, have stimulated the enterprise, which has its center in the truck-producing region near Philadelphia. The United States Department of Agriculture, as a result of this extension, has made a study of the early-apple industry, with the Middle Atlantic States as a field, and published the information collected in a bulletin entitled "Summer Apples in the Middle Atlantic States," issued by the Bureau of Plant Industry. This bulletin is a compendium of information covering all phases of the question of early-apple production, including soils, climate, culture, picking, packing, marketing, etc. Numerous varieties are described, and season and other data conveniently presented in tabular form. Although this bulletin applies more distinctly to the operations in the Atlantic States, it is of value and interest in all sections. Write for a copy to Bureau of Plant Industry, United States Department of Agriculture, Washington, D. C.



Next to Solid-Gold the Finest Watch Cases are "Crescent" or "Jas. Boss" Gold-Filled
THIS is a thing to remember when you buy either a man's or woman's watch.
Pay no attention to Guarantees stamped inside the case. We have told you Guarantees are meaningless. There is nothing to prevent the manufacturer from stamping "Guaranteed for 20 years" inside a brass case washed with gold.
If you cannot remember these names clip out the trade-marks from the bottom of this page and take them to the jewelry store.
These marks insure absolute integrity in bullion value, in assay, and in the construction of your watch case.
They are standard with the fine jewelry trade and have been for 50 years.
CRESCENT GOLD FILLED

FOOD FOR THE INDOOR WORKER.

A different kind of food is required by indoor workers—those who sit at desks and get little exercise—from the rich, heavy foods that can be eaten with comparative safety by people who are constantly on the go out of doors.

The digestions of indoor workers usually are impaired—after lunch they suffer especially.

Such persons will find that if they will quite often eat the Graham Crackers baked by the National Biscuit Company their digestions and appetites will be helped wonderfully.

Graham Crackers are the most delicious food baked from Graham flour. And Graham flour contains all the nutriment of the wheat and has the virtue of stimulating the digestion as well.

The Graham Crackers baked by the National Biscuit Company have a different taste from the old-fashioned kinds. They have a toothsome, nut-like flavor, and are so made by perfected processes that all the natural sweetness and healthfulness of the wheat is preserved. They are packed in moisture- and dust-proof packages, bearing their In-er-Seal Trade-Mark.

NEEDED ON THE FARM.

A new booklet received from the Carbolineum Wood Preserving Company, 518-520 Prairie street, Milwaukee, Wis., deserves, we believe, the attention of every reader who is not already using the very valuable preparation referred to. We have been familiar with it for many years; have received any number of letters from readers commending it highly after personal trial, and have the highest confidence in its virtues, not only for the preservation of wooden structures, but as an insecticide and protector from vermin of many descriptions. We would not ourselves erect any wooden plazza, gate, fence or anything of the kind exposed to the weather without having it thoroughly treated with carbolineum or be without it in the chicken coops, where it eradicates chicken lice and mites, and we strongly advise readers to send for the booklet. Address, Carbolineum Wood Preserving Company, Dept. 47, Milwaukee Wis.

"THE CINCH TIRE REPAIR KIT"

A new device that repairs a puncture in a minute. No sand papering, cementing, leakage of air or patches to fall off. Simple to operate. The repair is permanent and absolute. Send for free descriptive booklet.

Automobile Tire Repair Co.,
Box 132, Lancaster, Pa.

Failure to comply with sanitary laws of the state of Oklahoma resulted in the Dairy Inspector putting a padlock on the creamery station of J. T. McGehee, of Custer county. If he does business again he will have to clean up his premises and keep his utensils in proper condition.

PROVING THE PEOPLE'S POWER.

There is at least one man who has been able to demonstrate the power of united effort on the part of the people, especially the farmers. We refer to M. W. Savage, of Minneapolis, known the world over as the owner of Dan Patch, 1:55, proprietor of the International Stock Food Company, and of more recent fame because of his single-handed, marvelous achievements in the planning and building and operating of the Dan Patch Electric Railroad.

It has been generally believed that railroads must be built by Wall Street; that any state or any man or any aggregation of men wanting a railroad, either steam or electric, must consult the big financiers and get their money from Wall Street.

When the rich, prosperous stretch of territory between Minapolis, Minn., and Rochester, Minn., became recognized as an ideal route for a big, prosperous electric railroad, the matter was put up to M. W. Savage as being the one man in the state capable of carrying through such a project.

He, being a strong believer in the people, especially in the power of his farmer friends and customers when united for a single purpose, conceived the idea of making the railroad a people's enterprise and financing it by the sale of the stock to the people.

The idea, of coufse, was ridiculed by those who did not know anything of the M. W. Savage reputation and standing amongst farmers and stock raisers; but when he got the enterprise into action and threw his wonderful energy and ability into the proposition he soon demonstrated that he was right.

He laid the facts and figures before his friends in all parts of the country. They subscribed liberally for the stock, recognizing not only the value of the investment opportunity, but the high integrity and unquestioned honesty and ability of President Savage, so that to-day the road has about 5,000 stockholders, forty miles of high-class electric road in operation, running from Minneapolis to Northfield. The Governor of the state has been down over the line, pronounced it a splendid achievement and spoke from the rear end of one of the cars, endorsing the Dan Patch Electric Line and its management.

President Savage has been able to make very liberal offers to the public, and while the enterprise has reached a point both in construction and operation where it seems advisable to modify the plan somewhat to conform to the rapid progress being made towards extensions of this road, he is still able to make very attractive offers to investors.

There is a wonderful opportunity for further development of electric lines in this territory, and Mr. Savage is confident that his friends and supporters will assist him in developing its possibilities to the fullest extent.

It is the first electric line of this magnitude ever built in this country entirely by stock subscriptions from the people, and must go down in electric railroad history as one of the greatest achievements in connection with electric railroad building, which in the last few years has become recognized as one of the greatest industries in the country.

A representative of this paper took a trip over the line to Northfield a short time ago, and was very much impressed with the quality of the roadbed and equipment and the traffic now being handled. See page 29.

DEER LEAP SIX-FOOT FENCE AND MAKE HOME IN AMMUNITION PARK.

Stocking a game preserve has always been regarded as a most expensive undertaking. Yet an incident that occurred recently at Bridgeport, Conn., bids fair to establish an exception to the rule. Incidentally, too, it casts a doubt upon the old-time theory that game scent danger in the smell of powder.

Within the confines of a park consisting of 370 acres of wild land are located the powder magazines and shooting range of the Union Metallic Cartridge Company. This park is completely enclosed by a fence five miles long, which, with its barbed-wire attachment at the top, measures fully six feet high. The surrounding country, too, is more or less wild and naturally abounds with game.

Whether they were attracted by the odor of the tons of powder stored in the numerous U. M. C. vaults, or simply possessed of a desire to enjoy the exclusiveness that the forbidding fence suggested, is a matter of conjecture. Yet the fact remains that one morning, about a year ago, a doe was discovered complacently pawing the ground on the interior side of the U. M. C. fence. About a year later it was joined by a buck and then a short time after the family was increased by the arrival of a fawn.

Quite recently the employees of the U. M. C. factory were surprised to see that the group of invaders had increased to six, another fawn, doe and buck having joined them. All approaches and entrances to the park being carefully guarded, the only way the deer could have possibly entered was by leaping the six-foot fence.

So acclimated have they become and so absolute a disregard for the explosion of ammunition do they display that frequently, during the testing on the 1,000-yard range, where both targets and shooters are located on hills, it is actually necessary to drive them from within the line of fire.

FAT is Dangerous

Over-Fatness Shortens Life, Causes Heart Failure, Loss of Vigor, Kidney and Stomach Troubles. Spoils Figure, Is Uncomfortable, Unsightly.

Let Me Send You My Proof Treatment Absolutely Free.

WOULD YOU LIKE TO REDUCE YOUR FAT A POUND A DAY?

ILLUSTRATIONS SHOW REDUCTION OF 98 POUNDS.

My treatment is intended to make you look and feel years younger; to aid in giving you beautiful figure, skin, eyes, full womanly health and attractiveness, the kind that husbands adore and all others admire.

THOUSANDS OF TESTIMONIALS.

Lost 115 Pounds. Mrs. E. M. Reynolds writes: "When I began your treatment I weighed 285 lbs. I now weigh 170 lbs., and **never felt better** in my life. My bust measure is reduced from 54 inches to 38 inches; waist from 42 inches to 28 inches."

Permanent. M. E. King writes: "By the Dr. Bradford Method **I reduced 35 lbs.** eight years ago; haven't gained an ounce since. Rheumatism also cured."

Reduced 90 Pounds. W. R. Dennison writes: "I tried many so-called remedies, but got no satisfaction until I adopted the Dr. Bradford treatment, and have reduced 90 lbs. easily. Am now able to attend to my hotel business **without the feeling of being tired out** before evening comes on."

Weighs 60 Pounds Less. Mrs. Philip Fisher writes: "I was **a great sufferer from obesity,** it made me feel sick most of the time; had pains in back and **could hardly walk.** Am now able to tell another story; my **troubles have disappeared** and am **feeling fine.** Have lost 60 lbs. by your treatment."

Reduction 56 Pounds. Mrs. Alice Rouse writes: **"Health comes before everything else,** and your treatment has brought it to me; the loss of fat has been 56 lbs., and I have had many other benefits."

Lost 98 Pounds. Mrs. J. H. Wooldridge writes: "My figure and appearance have been wonderfully improved, have lost 98 lbs. **Friends amazed."**

Saved Her Life. A. G. Osgood writes: **"You saved Mrs. Osgood's life;** she was so fat that she had **fatty heart;** doctor said she could not live over a month, and **was liable to die any moment.** We got your treatment; loss of fat has been about 60 lbs. and her health marvellously benefited. No fear of dying now, doctors say."

Lost 112 Pounds. W. C. Newburn writes: "I have lost 112 lbs., am **wonderfully** benefited in heart and general vigor. Can climb mountains easily."

Full testimonials, from which above extracts were taken (with addresses), also many others, will be sent you.

I OFFER FREE PROOF TREATMENT

The testimonials printed in this advertisement are but a **few of thousands.** After you write me for my Free **Proof Treatment,** I will mail you a **legion** of testimonials, with names and full addresses of persons whose **weight has been reduced** and **perfect health restored.** You can write to or call upon former patients, who willingly, yea **gladly allow the use of their names.** My Treatment **reduces one pound daily** in many cases and is absolutely **safe, harmless, guaranteed.** My Method is intended to make you look **years younger, improves figure** and complexion. Gives surpassing **vigor,** induces **cheerfulness** and **joy** in healthy living. READ MY FREE BOOK. *I believe you will say it is worth its weight in gold!*

DR. H. C. BRADFORD, 287A, Bradford Bldg, 20 E. 22d St, New York, N.Y.

NOTICE.—Dr. Bradford is a diplomated, registered, licentiate practising physician of the State of New York, with a long record of success in quickly, gently and safely reducing the weight of over-stout men and women. You can place your confidence in him. Your letter to the Doctor will receive prompt, friendly, confidential attention.

TAKE CARE OF YOUR FEET.

To prevent cold, pneumonia and kindred winter and spring ailments, the feet must be kept warm and dry, and a good pair of rubbers will save money in two ways: They save shoe leather and doctor's bills, to say nothing of the discomfort of being sick, for no matter how heavy the shoes may be, they are not an absolute safeguard against damp feet.

To prevent cold feet, a simple course of treatment for stirring sluggish blood ought to be put into progress, as they arise from poor circulation, and unless they are treated properly, early twinges of rheumatism may be felt, and that most dreadful of all habits, insomnia, contracted.

A simple exercise for habitual cold feet is to slap the soles quickly and lightly with a small flat ruler, then steady the body and swing each leg in turn back and forth. If the feet are very cold, as from being in the snow, bathe first with cold water, as hot water will make them burn and itch.

Much relief may be given from the pain of corns and bunions by the simple use of corn and bunion plasters, which remove pressure of leather from the tender spot.

The first thing to do in trying to remove a corn or bunion is to remove the pressure, and unless one can cut a hole in the shoe worn, thereby removing all pressure, the best way is to change the style of shoe one has been wearing.

If the feet are inclined to be moist, dust them with a little Mennen's Talcum Powder every morning before putting on the stockings. Feet that perspire freely should be bathed every day in water in which a little alum has been dissolved, then dry thoroughly and dust a little of this talcum powder in the foot of each stocking every morning. This powder is said to be free from irritating properties, and if used plentifully will keep the feet in fine condition. If your feet are very tender, soak them in hot vinegar into which you have stirred a little powdered alum, and soak them in this at least once a day.—M. A. T.

I Cured My Rupture

I Will Show You How To Cure Yours FREE!

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated on. I fooled them all and cured myself by a simple discovery. THE SEWING AWL.

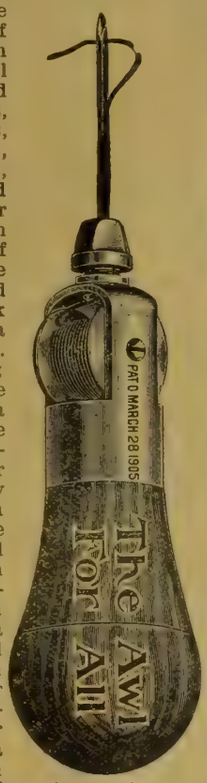
A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles; one is straight and one curved, with a small screw-driver and wrench combined. Also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished; the metal parts are nickel-plated; the needles and wrench are kept in the hollow handle, which has a screw top.



Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

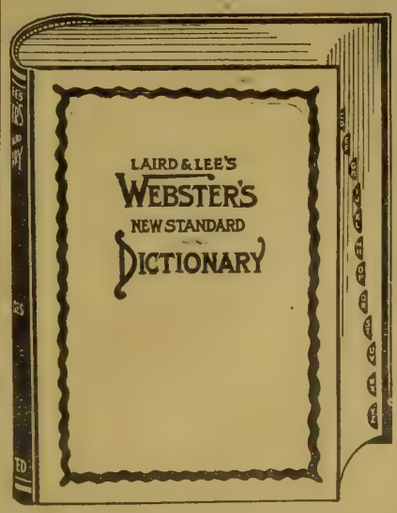
PRACTICAL FARMING AND GARDENING.

This is a book of 500 pages, 6x7½ inches to the page. It is a complete farmer's instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. We have adopted this book as a subscription premium. Send One Dollar and we will send you **Practical Farming and Gardening**, postage paid, and The National Famer and Stock Grower for two years. This is a grand offer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WEBSTER'S DICTIONARY.

The Most Compact, Useful, Handy Book Ever Issued by the American Press.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; also contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English



word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces. Our offer to you: Send us One Dollar and we will send you the National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SPRINGTIME MALADIES.

In the spring months horses are especially liable to all of the affections of the throat and membraneous tissues, coughs, influenza, pink-eye and distemper. In these troubles the one certain cure and preventive is Frazier's Distemper Cure, and the relief from the first dose of this remedy is perceptible. There are many of these diseases and many names for them, but there is only one remedy, and that is "Frazier's." Every bottle sold on a strict guarantee to give satisfaction or your money refunded. $1.00 size bottle contains three times as much medicine as the 50-cent size. Write for our thirty-two-page booklet; it is sent free. Binkley Medical Company, Dept. H, Nappanee, Ind.

Dried Fruits at St. Louis.

Apples—Evaporated rings at 8 to 8½c. for choice; 7½c. for prime, and 6½ to 7c. for poor to fair; waste at ⅜ to 3½c.; chops at 3 to 3½c. Sun-dried—Choice quarters at 6c.; prime at 5½ to 5¾c.; poor to fair at 4½ to 5c. Peaches—Sun-dried halves at 5c.—choice stock worth more.

The Pest of Locusts.

In addition to other troubles farmers are promised a visitation of locusts in the year 1911. Two crops of them, but in different sections. This is the subject of a farmers' bulletin which is just being issued by the United States Department of Agriculture, Washington, D. C. Farmers should write for it.

Blood Poison

30-Day Treatment FREE

Remarkable Results Produced By New Vegetable Treatment Without Use Of Mercury or Potash.

The terrible results of mercury and potash on blood poison are well known. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms often break out, and you find that your bones have been rotting all the while. Your teeth may begin to loosen and your tissues, glands, brain and vital organs show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Medical authorities admit that this is so.

The remarkable new treatment, called the Obbac Treatment, is purely vegetable, containing positively no mineral poison whatever, no mercury, potash, narcotics or opiates. It has produced remarkable changes in only 30 days. Treat yourself privately at home, and become as free from taint as a new-born child.

The wonderful Wasserman Test, the only blood poison test known to scientists, has proven that a man has been completely purified by the Obbac Treatment.

Don't spend months and years of your precious life, and destroy your health forever by taking mercury and potash which doctors commonly prescribe. Write today. Send your name and address and complete description of your case to the Obbac Co., 1197 Obbac Bldg., Chicago, and they will send you at once in an absolutely plain, firmly sealed package, a full 30-day treatment absolutely free.

Early in March on the St. Louis market fancy Red Globe onions sold at 75 to 85 cents a bushel, and fancy white at 85 to 95 cents a bushel.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for these troubles that you can depend on, and if you want to make a quick recovery, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you use it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

Malnutrition Among Country School Children.

The country child in America is probably better fed than in any other part of the world, yet even in this country there is some complaint of malnutrition among the children in country schools.

For the most part, this malnutrition is not generally due to poverty so much as to popular ignorance of the values of foods and of the necessity for balancing the ration with protein and carbohydrates. Thus, malnutrition is to some extent prevalent among the children just as it has been among our farm animals.

The malnutrition among the children in the schools makes itself noticed by the failure of such pupils to keep up with the rest. Often the teacher punishes the child for not getting his lessons, when the truth is that the functions of the body and mind work so slowly that it is impossible for the child to do the work in the same time as the other children. It is like trying to run a railway locomotive with a very low fire. There is not energy enough to force the engine forward at the required rate. Good teachers in country schools know this and make allowances for it. The poor teachers are ignorant of the fact and punish and scold the children for not doing as much work as the other children.

It makes one sad to notice how often school children are blamed for faults that are not theirs but are faults existing in the make-up of their bodies, faults in the ventilation of the school room or faults in the kind of food supply given them.

In the cities, medical inspection is bringing out the truth concerning malnutrition, and people are having their eyes opened. Children that were regarded as lazy and stupid are now seen to be inadequately nourished. Where they had censure before they now have sympathy.

In the cities malnutrition is frequently due to poverty; in the country it is frequently due to having the wrong kind of food badly cooked. Country teachers boarding in country homes frequently complain at the monotony and unhealthfulness of the food they receive.

One school teacher who teaches in the country tells me that she becomes ravenous for fruit during all the winter, as she seldom finds fruit on the tables. Day after day it is the same combination of fried potatoes, fried pork and a superabundance of fatty foods. The people with whom she boards raise and kill their own hogs and salt them down. Thus they feel free to use pork as many times a day as it can be used on the table. Fruit is lacking and so are fresh vegetables in winter and early spring. Starch and grease are in abundance, and this is the kind of food given the children for the building up of growing bodies and expanding brains. We do not know what would become of the children so fed were it not for the eggs and milk they get during the winter. But the amount of eggs and milk is not great enough to offset the lack of the other foods rich in protein.

An investigation of a rural school district in England showed that the dullness of some of the pupils was due almost entirely to malnutrition.

Staking Tomatoes.

Where tomatoes have no market value and only a few are grown for home use, as on thousands of farms, perhaps it does not pay to train up from the ground.

But if you are growing them for market it will pay to use stakes.

Either set a stake for each plant, or set a stand at each end of the row and run a wire along, tying the plants to the wire. Two wires will be needed.

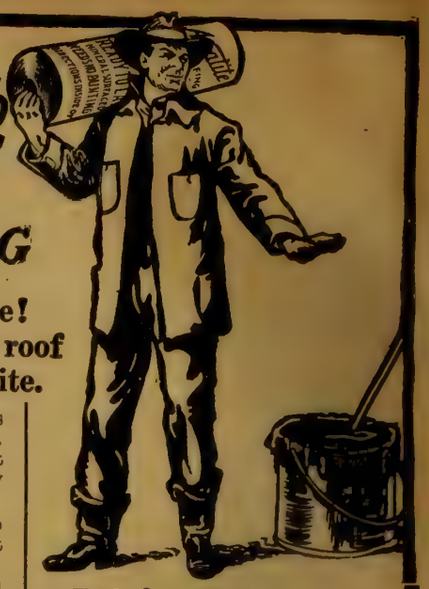
A single stake for each plant is better than the wire, and the plant should be large enough when transplanted to need the stake at once. Where vines trail over the ground, 25 per cent. of the crop is lost by rot. —Fruitman and Gardener.

Castrating and Docking Lambs.

We still find on the Minnesota farms and markets, every year, a large number of lambs that for some reason or other have not been castrated or docked as lambs. The failure to castrate is possibly due to the fact that it was thought best to keep the lambs for a ram, and later it did not prove to be a good-enough individual, and so it was put in the feed-lot. For neglecting to dock there can, however, be no excuse, except that of carelessness on the part of the breeder. All sheep should be docked, because it is economical and beneficial from every point of view. A sheep that is not docked usually has several pounds of manure on the fleece and tail during the winter, making it disagreeable to handle, beside being an unsatisfactory animal for breeding purposes or the feed-lot.

Lambs should be docked and castrated when they are about ten days or two weeks old. Little or no loss should occur from either operation, provided it is properly performed on lambs about that age. The easiest and most satisfactory method of castrating young lambs is by drawing the testicles. Lay the lamb on its left side and with a sharp knife cut off the top of the scrotum and draw the testicles. When two men do the work, let one put the lamb between his knees and draw the hind legs forward while the operator removes the testicles. This may be done with either the fingers or the teeth. The cord will break readily, and there will be but little trouble from loss of blood. It is well to apply a little tar or dip of some kind to the wound. Dock the tails about an inch to an inch and a half from the body. For this, use a sharp knife or a chisel, and put the tail on a solid block to perform the operation. Newly-docked or castrated lambs should never be permitted to stay in pens or lie in places that are filthy. A little care and attention given the matter during the early spring months is time well spent.—W. H. Tomhave, Extension Division, University Farm, St. Paul.

Amatite ROOFING



No more paint for me! I've now covered every roof on my place with Amatite.

TO buy a roofing that requires painting is inviting trouble. Painted roofings are as out of date as the harvester machinery of thirty years ago.

The roofing of to-day needs no painting. That's one of its great features.

If you are still using the "old rubber kind," the kind that requires painting every year or two to keep it tight, we want to tell you about Amatite; why it *needs no painting;* why it *wears longer* than the "smooth-surfaced" roofings, and why it *costs less.*

First—Its chief ingredient is Coal Tar Pitch—not a "secret compound" but a well known long tested material, recognized by engineers as the greatest waterproofing material known. *Two layers* of this material are used in every sheet of Amatite.

Second—We use two layers of the best grade of felt to hold the pitch in place. This felt gives tensile strength to the roofing, and is the best material known for that purpose.

Third—On top of these four layers is a *real mineral surface.* This surface requires absolutely no painting, and adds materially to the life of the roofing. It is fire retardent. It is permanent.

FREE SAMPLE

We want to send you a sample so that you can see what a solid, substantial waterproof roofing Amatite really is. Write to-day. Address nearest office.

TRADE B MARK

Won a Frisco Scholarship.

In the spring of 1910, The National Farmer and Stock Grower furnished James A. Partney, of Chilton, Carter county, Mo., one pound of Johnson County White Corn, grown by Mr. L. B. Clore, of Indiana. From this pound of corn he produced a good yield, from which he selected ten ears that in the Corn Contest of Carter county, Missouri, won a Frisco scholarship, valued at $100, at the Missouri Agricultural College. See our Seed Corn Offer on page 2.

FOUR BIG PAPERS 80 CENTS.

Send for Our Free Book and Learn of the Many Ways You Can Save Money About the Home by Using

JAP-A-LAC

Made in 18 Colors and Natural—(Clear) Renews Everything from Cellar to Garret.

Jap-a-lac is a stain, varnish and enamel combined. It comes already for use. You need no skill whatever to apply it. All you do is simply to spread it on with a brush It has a thousand and one uses. For example, there is nothing like it for putting a sanitary, permanent covering on your kitchen table It costs less than oilcloth, wears forever. Oilcloth isn't lasting and only sanitary until it begins to crack, and you know that within a few weeks of use it is bound to peel and within a few months it must be replaced. Every time you wash it it grows a little bit more smelly. By ordering a can of white Jap-a-lac today and applying it to the wood you can have a perfectly clean, waterproof table which can be washed in an instant and be kept always sweet and wholesome.

You can take your old chairs and with a few minutes' work have them looking brand new. You can paint your ice box or refrigerator. You can take the paper off your pantry shelves and give them a waterproof cover of Jap-a-lac which instantly puts them into a sanitary condition.

Jap-a-lac saves money and makes money for those who use it. It is unsurpassed for renewing floors, for restoring linoleum and oilcloth, for wainscoting rooms, for recoating worn out tin and zinc bath tubs, for brightening woodwork of all sorts, for coating pantry shelves and kitchen tables, for varnishing pictures (when thinned with turpentine) for gilding picture frames; for restoring go-carts and wagons, for repainting trunks and enameling sinks, for restoring chairs, tables, iron beds, book-cases and many other things—all of which are explained in a little book which you can have for a little request on a post card.

Jap-a-lac is for sale in, at least, one store in every town. If your dealer happens to be out of the color you want he can get it. Insist on Jap-a-lac. There is no substitute. You can't get the results you wish with anything else. There is only one Jap-a-lac and that is made by The Glidden Varnish Co. Be sure and send today for the free book—it gives all the facts. A post card will do. Write it now. Address

All Sizes—20c. to $3.00

The Glidden Varnish Co., Cleveland, Ohio—Toronto, Ont.

BLUINE MFG. CO., 123 Mill Street, Concord Junction, Mass

USED 20 YEARS; CANNOT BE BEAT.

Hempstead, L. I., April 29, '09, R. R. D. 2, Box 98. DR. B. J. KENDALL CO. Gentlemen:—Kindly send me your book. I have used your medicine for about twenty years, and find it cannot be beaten. Yours Truly, Daniel T. Stetson.

A Suggestion by the Editor.

The purpose of this paper is to be of service, of benefit to you—its readers. And so when an opportunity comes for us to make a recommendation that will be of advantage to you, we feel it our editorial duty to openly offer the suggestion to you.

In this present case we wish to tell you of a remarkable house that offers genuine advantages to our readers. We refer to the National Cloak and Suit Company of New York City, whose advertisement appears on page 3 of this issue. It will pay you both to read and answer this advertisement.

The "NATIONAL," as this famous house is familiarly known, has customers in every town and county in every state in America. It has been in business nearly a quarter of a century, and in some ways is one of the most remarkable business houses in the country. It is remarkable, first, because it pays all express charges on everything you buy, no matter whether ten cents' or ten dollars' worth. And furthermore, the "NATIONAL" absolutely guarantees to save you money, and to please you perfectly, or will refund every cent paid to them.

Now, the "NATIONAL" sells by mail all kinds of apparel for women, misses, girls and boys. Of course, their garments are first of all beautiful and very stylish and becoming; but equally important, they are reliable, durable and serviceable. And more important than all, their prices are very low—so low that all of our readers will save money by sending their orders to the "NATIONAL."

Now what we ask of each of our readers is this—that you each one write for the free "NATIONAL" Style Book offered in their advertisement. The "NATIONAL" at our request has reserved one of these Style Books for each of our readers, and is now holding it waiting for you to send your name and address. Write to the National Cloak and Suit Company, 280 W. 24th street, New York City, N. Y.

Inexpensive Wardrobes.

In planning her dressmaking a woman should keep in mind the fact that expensive clothes do not assure an attractive appearance, and that it is better to have two inexpensive dresses, which permit of a little variety, than one costly gown.

It is wise to make simplicity the keynote of every dress, and instead of spending all the available money on one or two, it is better to make it "go farther" with less expensive material.

Even the best dress when worn continually day after day becomes monotonous, and monotony in dress is as fatal to the appearance as monotony of thought is to the mind.

When, however, the wardrobe contains several dresses, it allows a welcome change on desired occasions and gives freshness and new life to the appearance. And, though inexpensive, just so the gowns are neat and becoming, they will lend an added charm to the wearer.

Of prime importance in the matter of serviceable dresses is the choice of material—it is necessary above all things that the material is of good, dependable quality, that will wear well, and, if it be a wash dress, will stand repeated washings without fading or losing its freshness and dainty appearance.

For this purpose nothing is more suitable and satisfactory than the many different styles of the well-known Simpson-Eddystone dress goods, which for sixty-eight years have maintained that high standard of excellence which made the Simpson name a by-word among the belles of our grandmother's day.

These substantial materials vie with the more expensive goods in elegance and beauty, as well as in originality and scope of designs and styles. And the fact that they are dyed in fadeless, permanent colors renders their use practical when less serviceable or less dependable goods would be worthless after becoming soiled, or ruined through washing.

The woman who wishes to plan her new clothes effectively on a small income can utilize these desirable materials to the best possible advantage; for instance, the silver-greys, hazel-browns and shepherd plaids, are all excellent.

Everyone can follow out her own ideas as to patterns and the style of trimmings, and each dress should of course possess its own particular touches of distinctiveness.

The materials ccan be obtained from leading dry goods stores, and in a great variety of designs.

Giant Melons in Asiatic Turkey.

United States Consul Wm. W. Masterson is located at Harput, on the river Tigris, in Asiatic Turkey, the region in which tradition includes the garden of Eden. He reports as follows to the Department of Commerce and Labor:

"Both the water and muskmelon of Diarbekir are the largest I have ever seen. Watermelons grow in Diarbekir each as large as a flour barrel, and muskmelons but little smaller, only the muskmelon is rounder like a pumpkin.

"These melons are raised in the bed of the Tigris, as after the spring rains are over and the snows have all melted from the mountains the river shrinks to comparative insignificance, and large tracts of the bottom land are thus exposed. This land is plowed and in each hill where the seeds are planted a quantity of pigeon manure is mixed in with the earth. There are people in Diarbekir engaged in breeding pigeons for no other purpose than to sell the manure to the melon growers.

"As the melons are growing over the moist soil of what was a river for six months of the year, no irrigation is necessary, and, though it seldom rains during the summer, the melon vines never dry up. The meat of these water and muskmelons is, however, very coarse and not nearly as sweet as the melons of smaller varieties grown in other districts of this country."

Another Corn Prize.

In the spring of 1910, The National Farmer and Stock Grower furnished to W. L. Norman, of Kingston, Tex., two pounds of Johnson County White Corn, grown by the famous champion corn grower, L. B. Clore, of Indiana. With this seed Mr. Norman raised about twelve bushels of corn, and with ten ears of it he won the second prize at the Texas State Fair, also a second prize from The National Farmer and Stock Grower. See our Corn Premiums offered on page 2.

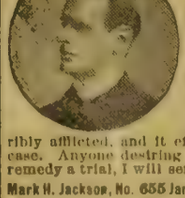
RHEUMATISM

A CURE GIVEN BY ONE WHO HAD IT



In the Spring of 1893 I was attacked by muscular and inflammatory rheumatism. I suffered as those who have it know, for over three years, and tried almost everything. Finally I found a remedy that cured me completely and it has not returned. I have given it to a number who were terribly afflicted, and it effected a cure in every case. Anyone desiring to give this precious remedy a trial, I will send it free. Address,

Mark H. Jackson, No. 655 James Street, Syracuse, N. Y.

Mr. Jackson is responsible. Above statement true.—Pub.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Light on the Farm.

Darkness has driven more boys and girls off the farm than all other influences combined. It is impossible to enjoy life with dark surroundings. Darkness is no longer fashionable. The cleanest and best light is the most economical. The first cost is moderate—the running cost is nominal. Turn to page 30 and read about "The Home-made Light From Crushed Stone." Then write to Dept. A—56, Union Carbide Sales Co., 157 Michigan Ave., Chicago, Ill., for booklets and particulars.

The Market For Roots.

Farmers' consignments of roots were selling as follows on the St. Louis market, late in February—sold by the pound: Golden Seal, $1.95; Ginseng—Wild at $4.50 to $4.75, and cultivated at $4.50 to $4.75—damp less; Lady Slipper, 15c.; Seneca, 32c.; Pink, 16c.; Black (dry), 4½c.; May Apple, 3¾c.; Snake and Kansas Black Snake, 23c.—inferior less; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½ to 5c.; Blueflag, 5c.; Sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 8c.; Spikenard, 3c.; Skullcap, 7c.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney, and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H - - Notre Dame, Ind., U. S. A.

Try It At My Expense

Take Immediate Advantage of This Free Offer and

Rid Yourself Of

CATARRH

Thousands suffering from Catarrh have been successfully treated by the use of my wonderful device. The

CO-RO-NA MEDICATOR

I will send it to you complete, ready for use, postage prepaid, so you may try it for five days.

FREE TO YOU ON TRIAL

If you have catarrh in any form you should not delay another day, but take immediate advantage of my **Liberal Free Offer** and endeavor to rid yourself of those annoying symptoms, such as:—**Hawking and Spitting, Discharge of the Nose, Sneezing Spells, Nose Stopped up, Bad Taste in the Mouth, Hoarse or Husky Voice, Dull Pain in Forehead, Hearing Bad, Failing Sight, Lack of Smell, Watery Droppings in the Throat, etc., etc.**

Take Advantage of this Offer

I want to send you my new and latest device, the **Co-ro-na Medicator,** so that I may prove to your own satisfaction that I have possibly the most successful treatment for Catarrh ever discovered. I will send it to you **on five days**

FREE TRIAL IN YOUR OWN HOME

and you do not pay me one cent until you have tried my treatment and have seen with your own eyes what it will do.

Send No Money

just your name in a letter or a post card and you will receive my **Co-ro-na Medicator** and a **five days treatment of my Co-ro-na Oil** by return mail all charges prepaid.

Try it for five days **at my expense,** and if you are satisfied at the end of that time send me my special introductory price of $1.00 and I will send you a **full month's supply** of my splendid **Co-ro-na Oil**—or if you are not satisfied return the **Co-ro-na Medicator** to me and the **full** trial will cost you nothing whatsoever.

I have such confidence in my treament that I gladly make this liberal offer so that every catarrh sufferer may prove for themselves that every claim I make is true. Write at once—today—right now.

C. G. PHILLIPS, PROP.
CORONA MFG. COMPANY, 16 Corona Block, Ashland, Ohio.

The Corn Market.

In our previous issue we stated that the corn market looked as though the bottom had been reached. This was not far wrong, but the corn market is not strong. On January 31st the May quotation closed at Chicago at 49¾ cents a bushel. On February 27th the closing May quotation at Chicago was 47⅝ cents. Here is a loss of nearly two cents during the month and a fall of 18½ cents, compared with a year ago. There is still a feeling that corn will continue to sell on the Board of Trade not far from the 50-cent mark.

St. Louis Cash Grain Prices.

These were the closing prices on the St. Louis market, February 28th: Wheat—No. 2 red wheat, 93 to 94c.; No. 3 red, 90 to 90½c.; No. 4 red, 80 to 85c.; No. 2 hard, 89½ to 97c.; No. 3 hard, 86 to 93c.; No. 4 hard, 78 to 83c.

Corn—No. 2 corn, 44c.; No. 3 corn, 43½c.; No. 4 corn, 42c.; No. 2 yellow, 44½c.; No. 3 yellow, 44c.; No. 2 white, 44½c.; No. 3 white, 43½c.

Oats—No. 2 oats, 30c.; No. 3 oats, 29c.; No. 4 oats, 28c.; No. 2 white, 32c.; standard, 31½ to 31¾c.; No. 3 white, 31 to 31¼c.; No. 4 white, 29 to 30c.

The above prices represent deliveries of grain and the cash received. Farmers in the country should deduct the freight charge to market to ascertain the value of grain on the farm.

Edward Baugh, Hog Salesman.

The picture above represents Mr. Edward Baugh, chief hog salesman for the firm of Clay, Robinson & Co. on the market at the St. Louis National Stock Yards, East St. Louis. He was formerly chief hog buyer at East St. Louis for Morris & Co., and at Chicago he bought hogs for the same firm. His experience as a buyer is invaluable to his patrons and the customers of his firm. It enables him to understand the force of buying as well as selling conditions. Anyone can take the market price when somebody will hand it to him; but resourceful men of skill, ability and perseverance are required in order to exert that influence on a market which salesmen should have when they sell hogs for other people. It is up to them to cause advances and to resist declines, to be an influence and a power on the market. Such a man is Edward Baugh, chief hog salesman for Clay, Robinson & Co. at the St. Louis National Stock Yards. He is also ably assisted by Mr. J. S. Mulberry, an efficient salesman and very popular because of his splendid record. They work together with the purpose in view of giving the best possible service under any and all circumstances. They are fully up to Clay, Robinson & Co. standards.

OVER-FATNESS KILLS.

Wonderful Success of a New York Physician's Treatment.

It is now admitted by the leading medical experts that corpulency (obesity) shortens life. Probably most over-stout persons die ten to forty years too soon.

Their fatness induces ailments of several kinds, principally fatty degeneration of the heart, kidney and liver trouble, chronic dyspepsia or other stomach disorder, rheumatism, gout and other serious diseases which become complicated by the pressure of fat around the vital organs.

There is also the danger of appendicitis, sunstroke, heat prostration, apoplexy, vertigo and other attacks, which may cause sudden death or lead to softening of the brain.

Fat people are never really well; they do not know how to enjoy good health because they do not possess it.

Fat women are never good-looking. They lose their figure, acquire double-chin, wrinkles, disorders of the female organism and general debility.

There is no need of despair, however, because Dr. Bradford has a perfected method of reducing the weight. In many cases, the fat man or woman can

REDUCE ONE POUND DAILY.

No inconvenient or torturing rules of shortening sleep, going without agreeable food or drink, or violent exercise. Neither are dangerous drugs given. In fact, Dr Bradford's treatment is the ideal. It is voluntarily recommended by a legion of persons who have taken it, proved its true worth and who cheerfully endorse this wonderful treatment.

This treatment for obesity not only gets rid of this fat speedily and permanently, but brings a good figure, facial beauty, brightness of eyes, and imparts those powers of personal magnetism which enable one to succeed in social and business life. Think of the joy of living healthily and for ten to forty years longer than if you are compelled to trudge under a great burden of unhealthy fat.

FREE TREATMENT.

The Bradford method is accompanied by a legal guarantee that it will be successful. Any reader of this paper who is over-fat can obtain a Proof Treatment, absolutely free, postpaid. It is only necessary to write a letter requesting same and it will come by return mail, in plain wrapper, nothing to show contents, with a valuable treatise, full directions, also numerous testimonials with names and addresses. This free offer is made to all who cut out and return this notice. Correspondence strictly confidential. Address, H. C. BRADFORD, M. D., 20 E. 22d street, 287 A, New York, N. Y.

Colorado Lambs Sell High.

It was February 20th that Clay, Robinson & Co. sold 969 Colorado lambs of 76 pounds average at East St. Louis for $6.40. This price was 40 cents per 100 pounds higher than any other lambs brought there that day, and 5 cents per 100 pounds higher than best price at Chicago and 30 cents per 100 pounds higher than top at Kansas City. They were marketed by the Colorado Valley Land Co., of Monte Vista, Colo.

Electric Railroads are Proving to be Big Money-Makers

I Am Building the Dan Patch Electric Railroad On To Rochester, 110 miles, and Offer You This Opportunity to Make Money With Me In This Great Enterprise

The First Electric Line to Tap the Wealth of Our Golden Northwest. Forty Miles Just Put in Operation to Northfield.

I Will Give You $500 in the Voting Stock Absolutely Free, in Addition to a Small Investment and I Believe this Free Stock Will Increase to Over $1,000 Cash Value.

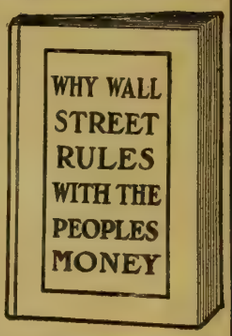
I BELIEVE I can show you the best electric investment opportunity that ever came to your notice—I firmly believe it and I have backed up my belief by a $100,000 investment myself. I don't want you to say "yes" or "no" until you give me a chance to talk with you a little while.

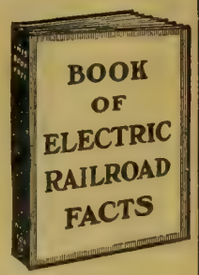
If you've got some money that you want to place where it will bring you big returns, or if you want to invest a little each month out of your income, give me your careful attention for a little while until I can lay before you an investment proposition that strikes me as a great big money maker for the people, and the indisputable facts bear me out in my judgment—I want you to have all the facts and then I believe you will want to put your money where it will work for you and you only.

Now, the first thing to do is to send you my big 40-page "Book of Electric Railroad Facts," which I'll mail you free and at the same time I also send you my other book called "Why Wall Street Rules With the People's Money." When you get these two books which contain all the facts about the Dan Patch Electric Railroad and about me, personally, then I'm willing for you to sit in the quiet of your home and pass judgment on the whole proposition.

I just want you to have these two free books that will open your eyes about banks and Wall Street and investments in general; and when you get these two books I'll stake my chances on whether you'll say "Savage is wrong" or "Savage is right," and it won't interfere with our feelings or friendship if you never invest a dollar or never write me again. I offer you these two books free—I want to show you how you can make your money work and earn for you.

Now just a minute, while I give you a few facts. Perhaps nine out of ten readers of this paper know me already, but to those who do not, I want to say that I've been doing a national and international business out of Minneapolis for the past 22 years.





My business is now the largest of its kind in the world—made so by the continued patronage of nearly three million, thinking, progressive, hard working farmers and stock-raisers. These people are my friends and customers—thousands have already invested in my new enterprise—some from your own State and from every State in the Union and every Province in Canada. I have built up a number of big enterprises here in the Northwest and now I'm building the biggest of them all. It is known as the People's Electric Railroad, owned and controlled by the people.

Dan Patch Electric Railroad

The Dan Patch Electric Railroad runs from Minneapolis to Rochester, and back from Lakeville to St. Paul—130 miles.

I am not merely "thinking" of building it now. The Northfield Division—over 40 miles of High Class Electric Railroad is now in operation.

I am working to make this the best constructed and biggest dividend-paying Electric Railroad in the country. High-class Electric Roads from New York to Spokane are great money-makers. I tell you all about it in my Big Book. This is the second time I have given the people a chance to share with me—my other new enterprise paid 8 per cent. the first nine months and 10 per cent. again the second year.

Now is your chance to share with me in this enterprise, the greatest of them all. I will give you $500 in voting stock in addition to a small investment. I want to send you the estimated net profit statement, showing how your investment can rapidly increase in cash value. This information is contained in my Big Book of Electric Railroad Facts. I want you to have it even though you never invest a dollar, and I am especially anxious for you to have my new Book, "Why Wall Street Rules With the People's Money."

Don't be backward about sending for these books. I want you to have them and they won't cost you a cent—they are free—some of these Wall Street secrets will open your eyes. I want you to see how the people's money works for Wall Street. I want to show you how to make your money work for you and for no one else.

M. W. Savage, President Electric Railroad Minneapolis, Minn.

Dear Mr. Savage:—I don't know whether I'll invest any money or not, but would like to have you send me your two Books—without any obligation on my part—entitled "Electric Railroad Facts" and "Why Wall Street Rules With the People's Money."

Send For The 2 Books Now.

MAIL ME THIS "FREE BOOKS" COUPON

I personally guarantee to protect your stock equally with my own and that it will make exactly the same per cent of profit. This is truly a people's road that is owned and controlled by the people.

I have just published a splendid photograph, 16x21 showing our splendid cars crowded with people arriving at Washburn Park Station. I will send you one free with the books. I want to tell you about this investment opportunity and how 4000 small investors have made it possible to build and operate this line without the help of Wall Street.

Founded 1842 by Wm. Simpson Sr.

Giant Himalaya Berry.

The Himalaya Berry Plant is an uncertain species of the Rosaceous Genus. The Rubeae Tribe, to which it belongs, is most abundant in those mountainous regions, beginning in Northern Italy and extending through Europe to the Caucasus, and from Persia eastward through the Hindu Kush and the Himalayas.

About sixteen years ago a collector sent to this country a small packet of seed which he had collected in his explorations in the Himalayas. These were tested on a plot of ground near Santa Rosa, California, and from the odd thousand which fruited there

was found one which seemed worthy of introduction.

A few plants were introduced about twelve years ago and given the name of the Himalaya Berry. Some of the original stock may be seen growing on a ranch in California; after twelve years the vines still show vigor and fruiting qualities.

Owing, however, to the Himalayas not being capable of as rapid propagation as other species of the Rubus genus, nurserymen sold seedling plants which never seemed to fulfill the promises made in the advertisements. and the Himalaya quickly fell in disrepute.

Of late years, growers who had a true strain of this remarkable berry have successed in obtaining a sufficient quantity of plants to give it a thorough test, and the results have far exceeded the original claims.

Luther Burbank says of it: "The Himalaya, I think, is to take a place which no other berry can fill."

The plant has a strong root system and differs from the generally known Rubus Villosus, or common blackberry, in that it does not readily sucker, the new cane growth starting at or near the root crown, generally from the main stalk or cane.

These canes, if permitted, will often reach a length of fifty feet in a season. Fruit laterals from three to five feet long are sent out from these canes and are gracefully pendant on the outside of properly-trained vines. Rather late in the spring, after the frosts are over, these laterals become a mass of delicate pink bloom which later gives way to an immense crop of very sweet, almost coreless black berries. The fruit ripens from July to November, and though hanging in clusters on the outside of the vine, it is amply shaded from sunburn by leaves of a beautiful olive shade, rather silvery underneath.

From three to five years is required for the Himalaya to reach perfection, and growers should not be hasty in passing judgment.

The vine should be considered a fruit tree and taken care of accordingly. It has always made good if given half a chance.

The Himalaya is adaptable to almost every variety of soil and climate, the former having more influence over prolificacy than the latter. The fact that it is succeeding in Florida, Alabama, New Mexico, California, New Jersey, New York, Michigan, Missouri, Montana and many other states speaks well for its future. It is a perennial to a marked degree, vines having passed through a winter of 21 degrees below zero unprotected.

The fruit compares favorably in size with the best of commonly-known blackberries, and as a shipper far outclasses any of them.

Fresh berries have been shipped over a thousand miles the past season and brought good prices.

There is practically no waste product, as the ripe fruit remains on the vines in good condition for a week or more, and if not wanted for market immediately can wait or be sent to the drier.

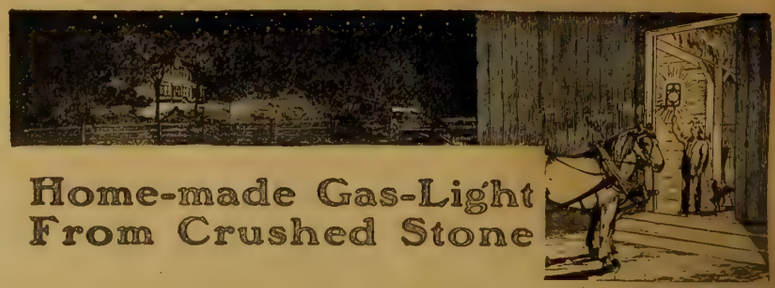
The Himalaya Berry is advertised in this paper by Mills' Seed House, Box 45, Rose Hill, N. Y. Send for catalogue.

The Spring Style Book.

The greatest and best ladies' outfitters are the National Cloak and Suit Company, of New York City. The advertisement of this house is on page 3. The National Cloak and Suit Company offer a special house dress of fine quality at a nominal price. They also offer to send the best style book free. There are 224 pages in the style book and it is full of the best patterns and up-to-date styles. Style and quality without extravagance go together in the style books of the National Cloak and Suit Company.

A Two-time Prize Winner.

In the spring of 1909, The National Farmer and Stock Grower furnished Mr. J. M. Gresham, of Rural Route No. 2, Smyrna, Tenn., a half-pound package of Yellow Dent Seed Corn, grown by Mr. D. L. Pascal, the famous corn champion of Iowa. This corn being sown and harvested, he selected a ten-ear lot from the yield, and by exhibiting it at the Tennessee State Fair he won the second prize in class for Yellow Dent Corn. Mr. Gresham also won a third prize at the Tennessee State Fair of 1910 with his Yellow Dent Corn. See our Corn Premiums mentioned on page 2.



Home-made Gas-Light From Crushed Stone

TWENTY years ago the oil lamp had already been driven out of the city into the country home, where gas could not follow—so we thought.

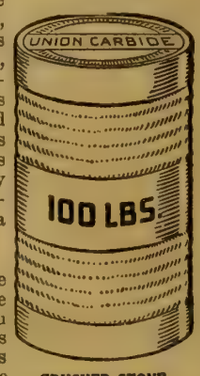
In those days we would have laughed at the idea of a country home lighted with gaslight.

But like the telephone and free mail delivery gaslight has finally left the city to become a common rural convenience.

In the year 1911, the up-to-date villager or farmer not only lives in a gas-lighted house, same as his city cousin, but when he drives home on a cold, wet night he actually lights up his barn, his barnyard or porches on his house with this gas-light by simply turning an "ignition" button on a post or wall.

* * *

And this change seems quite like magic when you consider that this rural gas-light is home-made— made by the family itself right on the premises.



CRUSHED STONE

Take fifteen minutes once a month to make all that can be used in a large house.

The magic is all in the curious manufactured stone known commercially as "Union Carbide."

This wonderful gas-producing substance, "Union Carbide," looks and feels just like crushed granite. For country home use it is packed and shipped from warehouses located all over the United States in sheet steel cans containing 100 pounds.

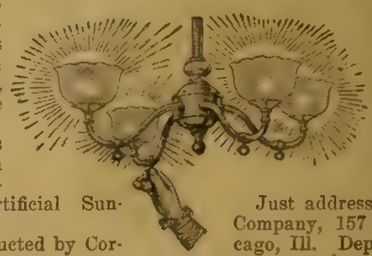
Union Carbide won't burn, can't explode, and will keep in the original package for years in any climate. For this reason it is safer to handle and store about the premises than coal.

* * *

All that is necessary to make "Union Carbide" give up its gas is to mix it with plain water—the gas, which is then instantly generated, is genuine Acetylene.

When piped to handsome brass chandeliers and fixtures Acetylene burns with an intensely brilliant, stiff flame, that the wind can't affect.

This flame makes light so white in color that it is commonly called "Artificial Sunlight."



Experiments conducted by Cornell University have proven that it will grow plants the same as sunlight itself.

Physicians recommend Acetylene as a germicide and a remedy for eye-strain, and it is used as an illuminant in fifty-four hospitals in New York City alone.

Then, too, Acetylene is so pure that you might blow out the light and sleep all night in a room with the burner open without any injurious effects whatever.

On account of its being burned in permanent brass fixtures attached to walls and ceilings, Acetylene is much safer than smoky, smelly oil lamps, which can easily be tipped over.

For this reason the Engineers of the National Board of Insurance Underwriters called Acetylene safer than any illuminant it commonly displaces.

In addition to all these advantages, Acetylene light is inexpensive.

An Acetylene light of 24 candle-power costs only about 4 cents for ten hours' lighting, while for the same number of hours regular oil lamps of equal volume cost about 6 cents in kerosene, chimneys and wicks on the average.

* * *

Consider this carefully and you will hardly wonder at the fact that there are today no less than 185,000 town and country homes lighted with home-made Acetylene, made from "Union Carbide."

Once a month some member of the family must dump a few pounds of "Union Carbide" in a small tank-like machine which usually sets in one corner of the basement.

This little tank-like machine is automatic—it does all the work—it makes no gas until the burners are lighted and stops making gas when the burners are shut off.

The lights located in every room in your house, on your porches, in your horse and cow barns, or barnyards and chicken yards if you like, will all be ready to turn on with a twist of the wrist or a touch of the button at any time of the day or night.

No city home can be as brilliantly or as beautifully illuminated as any one of these 185,000 homes now using Acetylene.

* * *

If you want to be up-to-date, enjoy modern conveniences, and keep the young folks at home, write us how many rooms and buildings you have. We will send you free an intensely interesting lot of facts, figures and booklets.

Just address Union Carbide Sales Company, 157 Michigan Ave., Chicago, Ill. Dept. A.— 56.

The Grand Sweepstakes Corn at the Illinois Corn Show was Reid's Yellow Dent, grown by J. H. Thrash, of Tolona, Ill., from his own pure-bred seed. The ten winning ears were selected from a field of fifty acres which averaged fifty bushels per acre.

One of the Rock Island agricultural demonstration trains made stops at twenty-four towns, held twenty-six meetings, and in 290 miles' travel the attendance was 12,975. On February 16th on the Rock Island lines eight meetings were held with a total attendance of 5,362.

SELECTED POETRY.

TOWSER MUST BE TIED TO-NIGHT.

Slow the Kansas sun was setting
O'er the wheat fields far away,
Streaking all the air with cobwebs,
At the close of one hot day.
And its last rays kissed the foreheads
Of a man and maiden fair,
He with whiskers short and frowsy,
She with red and glist'ning hair.
He with shut jaw stern and silent,
She with lips all cold and white,
Struggled to keep back the murmur:
"Towser must be tied to-night."

"Papa," slowly spoke the maiden,
"I am almost seventeen,
And I've got a real lover,
Though he's rather young and green.
But he has a horse and buggy,
And a cow and thirty hens.
Boys that start out poor, dear papa,
Make the best of honest men.
But if Towser sees and bites him,
Fills his heart with sudden fright,
He will never come again, pa;
"Towser must be tied to-night."

"Daughter," firmly spoke the farmer,
Every word pierced her young heart
Like a carving knife through chicken
As it hurts a tender part.
"I've a patch of early melons,
Two of them are ripe to-day,
Towser must be loose to watch them,
Or they'll all be stole away.
I have hoed them late and early,
In dim morn and evening light,
Now they're grown I must not lose them,
Towser'll not be tied to-night.

Then the old man ambled forward,
Opened wide the kennel door,
Towser bounded forth to meet him,
As he oft had done before.
And the farmer stooped and loosed him
From the dog chain short and stout,
To himself he softly chuckled:
"Bessie's feller must look out."
But the maiden at the window
Saw the cruel teeth show white,
In an undertone she murmured:
"Towser must be tied to-night."

Then the maiden's brow grew thoughtful,
And her breath came short and thick,
Till she spied the fam'ly clothes line,
And she whispered: "That's the trick."
From the kitchen door she glided
With a plate of meat and bread;
Towser wagged his tail in greeting,
Knowing well he would be fed.
In his well worn leather collar
Tied she then the clothes line tight,
All the time her white lips saying:
"Towser must be tied to-night."

"There, old doggie," spoke the maiden,
"You can watch the melon patch,
But the front gate's free and open
When John Henry lifts the latch.
For the clothes line tight is fastened
To the harvest apple tree.
You can run and watch the melons,
But the front gate you can't see."
Then her glad ears hear a buggy,
And her eyes grow big and bright,
While her young heart says in gladness:
"Towser, dog, is tied to-night."

Up to the path the young man saunters,
With his eye and cheek aglow,
For he loves the red-haired maiden,
And he aims to tell her so.
Bessie's roguish little brothers,
In a fit of boyish glee,
Have untied the slender clothes line
From the harvest apple tree.
Then old Towser hears the footsteps,
Raised his bristles fixed for fight.
"Bark away," the maiden whispers,
"Towser, you are tied to-night."

Then old Towser bounded forward,
Passed the open kitchen door,
Bessie screamed and quickly followed,
But John Henry's gone before.
Down the path he speeds most swiftly,
For old Towser sets the pace,
And the maiden close behind them
Shows them she is in the race.
Then the clothes line—can she get it?
And her eyes grow big and bright,
And she springs and grasps it firmly,
"Towser shall be tied to-night."

Oftentimes a little minute
Forms the destiny of men;
You can change the fate of nations
By the stroke of one small pen.
Towser made one last long effort,
Caught John Henry by his pants,
But John Henry kept on running,
For he thought that his last chance.
But the maiden held on firmly,
And the rope was drawn up tight,
But old Towser kept the garments,
For he was not tied to-night.

Then the father hears the racket,
With long stride he soon is there,
Where John Henry and the maiden
Crouching for the worst prepare.
At his feet John tells his story,
Shows his clothing soiled and torn,
And his face so sad and pleading,
Yet so white and scared and worn,
Touched the old man's heart with pity,
Filled his eyes with misty light,
"Take her, boy, and make her happy;
Towser shall be tied to-night."

PA'S THOUGHTFULNESS.

I don't know what makes pa so glum,
A day or two ago he come
Home from the job he has in town
An' sighin' as he settled down
In his arm chair he said: "My dear,"
Meanin' my ma, "I've somethin' here
That ought to make you awful glad;
An' children, when fate swats your dad
An' he is carted to the dump
Where tumblebugs and bees galump
You needn't wonder where you're at—
Your daddy has looked out for that.

"I have insured my worthless life,"
Pa said; "I want to tell you, wife,
That I ain't done no other thing
That made me feel so good, by jing!
I'm glad I done it! You will be,
When you have seen the last of me,
Beyond all want and every fear
Of goin' broke from year to year;
You'll never have to rub-a-dub
Nobody's clothes, nor kneel and scrub
Nobody's floors; I've fixed things right;
I'm feeling mighty good to-night."

"That's nice of you," said ma to pa,
"You're the best man I ever saw!
I hope you'll live a thousand years!
I wish you might, but this thing clears
A lot of doubts from off my mind
For us folks who'd be left behind.
If you keep livin' like you are
We'll never git a tourin' car,
No sealskin coat, and little Jim—
There'll be no college course for him.
I almost wish—" She heaved a sigh.
Then pa got mad. I wonder why?
—Chicago News.

OCCUPATION THE KEY TO CONTENTMENT.

They stood before the Angel at the gate;
The Angel asked: "Why should you enter in?"
One said: "On earth my place was high and great."
And one: "I warned my fellow-men from sin."
Another: "I was teacher of the faith;
I scorned my life and lived in love with death."
And one stood silent. "Speak," the Angel said;
"What earthly deed has sent you here to-day?"

"Alas! I did but follow where they led,"
He answered sadly; "I had lost my way—
So new the country, and so strange my flight;
I only sought for guidance and for light."
"You have no passport?" "None," the answer came.
"I loved the earth, tho' lowly was my lot.
I strove to keep my record free from blame,
And make a heaven about my humble spot.

"A narrow life; I see it now, too late;
So, Angel, drive me from the heavenly gate."
The Angel swung the portal wide and free,
And took the sorrowing stranger by the hand.
"Nay, you alone," he said, "shall come with me,
Of all this waiting and insistent band.
Of what life gave, you built your paradise;
Behold your mansion waiting in the skies."
—Ella Wheeler Wilcox, in The Oklahoman.

McGINNISS THAT WAS.

McGinniss is dead; but, begorry,
He left a great record behind;
He died at the height av his glory
An' he was the glorious kind!
His inimies called him a grafter,
An' maybe he was, but I know
He was head av the legions av laughter
An' I'm happy to think av him so.

He was brimmin' wid blarney an' banter,
An' buzzin' wid humor an' fun.
He rollicked through life at a canter
Whin it wasn't a race or a run;
To women—the best or the worst one—
His voice was a tindher caress.
He'd spend his last cint like the first one
Wid a manner no words cud express.

He was fond av good dinners and suppers,
An' fond av good liquor as well,
An' though he was oft on his uppers,
Be hivens, you niver cud tell!
For his smile was a warm one an' winnin';
His manner was gracious an' bland;
In virtuous ways or in sinnin'
Oho, but McGinniss was grand!

McGinniss is dead an' departed,
But he was a Man to the ind;
Big-handed, big-voiced, an' big-hearted,
A frind that was always a frind!
From New Year's clear through to December
He wint the whole route, good or bad,
Ochone, we'll be proud to remember,
An' sure to be missin' the lad!
—Berton Braley, in Harper's Weekly.

GENERAL FARM NOTES.

It is now about fifty years since the Missouri Pacific Railway was opened between Sedalia and St. Louis. From Independence and Lexington the connection was made by stage line.

From Carmi, White county, Ill., in the month of February, it was reported that Illinois farmers were sowing clover seed, and that practically every farm in the southern end of the state was being seeded in part to clover. Most of the fields sown are in wheat, and the clover will be allowed to "stand" when the grain is harvested.

L. A. Parsons, of Wellborn, La., and Cullen Thomas, of San Augustine, La., won first and second prizes in boys' classes at the National Corn Show, each exhibiting ten ears of yellow corn. Prize winners from Louisiana with white corn were Mourse Lacaze, Linton Caskey, H. P. Baker, Jr., Lones Gaspard and Clyde Loften.

Mr. E. D. Roberts, of R. F. D., Red Oak, Iowa, is advertising pure-bred seed corn of his own growing. He is one the foremost corn growers of his state and a prize winner at the National Corn Show.

Mississippi boys winning prizes at the National Corn Show, each with ten ears of White Dent Corn, were Vernon Lundy, of Lexington; Wm. W. Broome, of Lexington; Shepherd Darnell, of Lexington; Kinnie Divine, of Sharon; and Willie Bristes, of West. They won first to fifth, in the order named.

In the year 1910 the United States Agricultural Department printed and distributed 24,530,919 pieces of literature devoted to the improvement of agriculture.

The Georgia winners in the boys' classes at the National Corn Show were Horace Tanner, of Milledgeville; Ralph E. Davis, of LaGrange; Joseph Stone, of Center; and Hoyt Stone, of Center.

J. D. Elliott, of Ramsey; H. H. Scott, of Fort Payne; J. J. Phillips, of Jacksonville; Grover Shamblin, of Dew Drop; and Lofton Brock, of Cuba—all of Alabama—exhibited White Dent Corn at the National Corn Show in the boys' classes and won prizes in the order named.

If you want to save money [illegible] chase of fence, write Kitselman Muncie, Ind., for their free cat[illegible] are selling fence direct to th[illegible] days' free trial for 13½ cents their ad. in this issue on page

Thomas Tunis, of Appomattox, W. J. Edwards, of Crystal Hill, Va., winners in the boys' classes at the Nati[illegible] Corn Show.

Uneeda Biscuit
Always Ready
Wise foresight should lead you to keep in the cupboard a half dozen or more handy packages of
Uneeda Biscuit
They won't get broken, musty, soiled or soggy like ordinary soda crackers because their crisp, clean freshness is protected by the moisture-proof and dust-tight package.

Write for GRAND FREE MILLWORK CATALOG

Buy Building Material at 50c on the Dollar

Direct from Our Great Millwork Plant—No Middlemen

QUALITY, SAFE DELIVERY AND SATISFACTION GUARANTEED

"Uncle Sam" is Our Traveling Man

5,000 Bargains Ready

Doors, Windows, Mouldings, Flooring, Frames, Lumber, Lath, Shingles, Roofing—Everything!

We are selling high-grade guaranteed Building Material of every description at 50 cents on the dollar. If you want to save 50 per cent of the prices demanded by retail dealers, here is your chance. Simply put your name and address on the coupon and "Uncle Sam" will bring you our Grand Free Catalogs of over 5,000 Bargains—everything required to put up a new building or modernize an old one. Here in our great new fireproof plant, built of solid concrete, we carry the largest, finest stock of building material in the world.

Build That House or Barn NOW and Save Money in Big Chunks!

To celebrate the completion of our new fireproof plant, we have started a sale that has startled the country. So great are the price reductions, so vast and varied is the stock, so wonderful are our new facilities for quick shipment, that the public is simply paralyzed. If you are **ever** going to **build**, if you are **ever** going to **remodel** or **repair** your house, barn or other buildings, if you are **ever** going to buy Building Material, **now, now, now** is the accepted time—the supreme opportunity to save **big money**—to make every dollar go **twice as far as before.** Such stupendous bargains, such money-saving offers, such high quality for so little money, may never, never, never come again. Delay may cost you dearly.

A Flight of Stairs Complete for **$23.93**

Our prices save you from $60 to $125 on stairs.

THE W. K. KELLOGG NATIONAL CORN TROPHY.

The National Corn Show where this trophy was competed for is an event of tremendous magnitude, and every state in the Union growing corn had exhibits in the contest.

R. A. JAMES,
Winner of W. K. Kellogg National Corn Trophy For 1910.

A GENEROUS DONATION.

Mr. W. K. Kellogg, President of the Kellogg's Toasted Corn Flake Co., of Battle Creek, Mich., is interested in the corn crop because he buys 10,000 bushels of corn a day. He donated the trophy illustrated on this page for annual competition at the National Corn Show until won twice by the same grower. It is thirty inches in height, of sterling silver, bronze and enamels, a truly valuable and artistic creation, and cost one thousand dollars.

WORLD'S BEST EAR OF CORN FOR 1910 —Grand Champion Ear of the National Corn Show.

At the National Corn Show recently held at Columbus, Ohio, the trophy was won by Mr. R. A. James, of Charleston, Ill., which was Reid's Yellow Dent variety, crossed with Alexander's Gold Standard. The ear of corn is 10 inches long and 7½ inches in circumference. In the scale of points by which corn is judged it outclassed all other ears of corn in competition. In future issues of this paper it is the intention to publish, side by side, full-size illustrations of this and several other famous ears of corn.

Stomach and Lung Troubles

Rheumatism, Kidney and Liver Troubles

Weak Circulation and General Debility Have Been Cured By Magnetic Shields

In Hundreds of Cases After All Other Treatment Had Failed.

We Prove It To You

By the Words of Those Who Say They Have Been Cured With Magnetic Shields

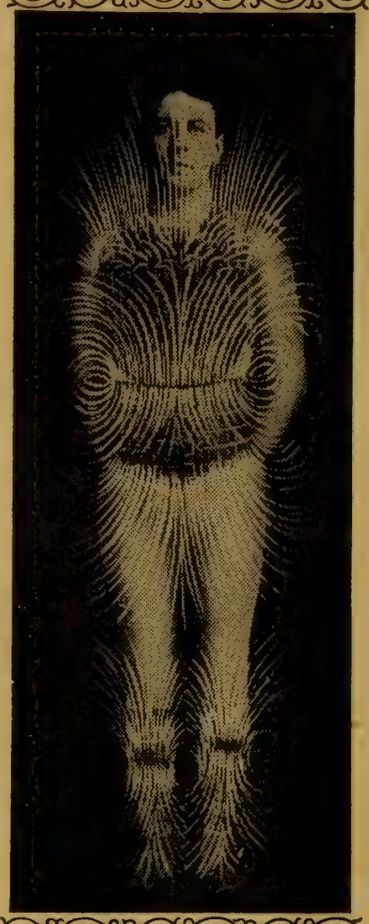
All we wish is an opportunity to show you the evidence, and after you have seen what wonderful work has been accomplished by Magnetic Shields, **YOU ARE TO BE YOUR OWN JUDGE** as to whether or not you want to use Magnetism in your own case, the same as others have. We do not urge anyone to buy Magnetic Shields; we simply give you the facts, and after considering the facts you follow your own inclination. It is your duty to investigate. It will cost you nothing to get the facts, and you will obtain much valuable information, free of charge, upon the subject of Magnetism, if you send statement of your case.

You Have Everything To Gain

By a careful, thorough investigation, for Magnetic Shields have done all we claim for them and a great deal more, or we certainly would not ask you to make an investigation and use the result of that investigation as the basis from which to judge of the merit of Magnetic Shields as a curative agent.

We Make Shields For Every Part of the Body For the Treatment of Every Form of Oisease

The accompanying cut shows how Magnetism is radiated from the Lung Shield, Belt and Lower Leggins into all the vital organs, as well as lower extremities, giving new life and activity to the circulation from head to foot, thus strengthening all the vital organs and large nerve centers and assisting nature in the work of eliminating diseased conditions by reason of the better circulation of blood that is established as soon as the Shields are applied. This set of shields contains over eight hundred powerful Magnetic Storage Batteries, that are guaranteed to hold their power and will never have to be recharged.



Read the Truth

More Forcibly Expressed in These Letters Than Any Statements We Could Make

"GOD BLESS DR. THACHER!" PARALYSIS OF LOWER HALF OF BODY OF SIXTEEN YEARS' STANDING

THACHER MAGNETIC SHIELD CO., CHICAGO, ILL.

Dear Sirs: It would take a large amount of space to give a history of my case from start to finish, but for the sake of suffering humanity I will give a few words to help along, if possible, the great work you are doing for the afflicted. In 1883 I was taken with malarial fever of typhoid form, causing complete muscular paralysis. By the aid of the best medical skill in the East, I became, after several years, able to sit up and use my arms, but my lower limbs remained paralyzed until after I put on the Magnetic Shields in 1899, sixteen years afterward. My case is a noted one in New York State, and all the medical fraternity decided I would never be able to walk again. Dr. C. I. Thacher said I could and would walk again, and he was right and all the rest were wrong. It is needless to say that I had spent money freely all these years without receiving results, until I found the Magnetic Shields. We who have been restored by its wonderful power begin to realize the great work being accomplished by Dr. Thacher, and we would be unjust to our Creator and to our fellow-beings, as well as being very ungrateful, if we did not use all our efforts and powers in spreading the grand truth, bringing greatest joy and hope to the chronic invalid, deliverance from disaster, transition from the old life to the new. I am one of the thousands who, with all my heart, can say fervently: "God bless Thacher and his great work." All personal letters, inclosing stamp for reply, will be promptly answered for those wishing minute data of my case. Yours truly, CLARENCE D. SMITH, R. F. D. No. 6, Rome, N. Y.

SERIOUS COMPLICATION OF LUNG, STOMACH AND KIDNEY TROUBLE. A MARVELOUS CHICAGO RECOVERY

DR. THACHER:

Dear Sir: It gives me great pleasure to testify to the perfect cure I have gained by using your wonderful Shields. After suffering fifteen years with stomach troubles, although doctoring the greater part of the time, I kept getting worse until I was the victim of a severe complication of stomach and kidney trouble, which a year and a half ago all seemed to go to my lungs. Had dreadful pains, lost my appetite, could not sleep, became so very weak I could hardly walk across the floor, and not able to do my work. At times when my pains were not so severe I would try to read, but could not for more than five minutes at a time, as I was very nervous. My family and friends thought I could not live another month. I was getting tired of taking medicine. Nothing helped me. I happened to see your advertisement in the paper, which read: "Magnetism Cures Without Medicine." I thought "While there is life there is hope." So just one year ago today I put on your wonderful Magnetic Vest, Leggins and Insoles. The result was a miracle, for in two days I felt relieved; in a week very much better; in three weeks entirely cured.

Words cannot express how thankful I am to you for your kind advice; also for the treatment, to which I owe my life. May you live long for suffering humanity's sake. May your great and sure cure be known a great deal better than it is today.

Yours respectfully,
MRS. O. RAY, 2316 Ridgeway St., Chicago, Ill.

Complicated Case of Piles and Stomach Trouble Restored to Youthful Vigor at Age of 64

Dr. Thacher, Chicago, Ill.

Dear Dr. Thacher:—It is now eleven years since I first made my acquaintance with the Magnetic Shields. I was then a physical wreck from indigestion and piles, which made life a burden to my existence. I had suffered with a weak stomach from my boyhood, and in the army I contracted the piles and other complicated conditions which disabled me from active work. One day I called at a house and for the first time learned of the Magnetic Shields. The book, "Plain Road to Health," had been sent to those people and I got it and read it. I recognized and felt the truth of your statements in that valuable work, and concluded that I would send for a Belt and Leggins. I soon felt a new impetus of life and general improvement. My piles left me in three days and I never had them since. I recovered my health perfectly, and am now in my sixty-fourth year, and I am as sound and active as I was at twenty. I wear the Shields every winter and I am always free from colds, grip, etc. I never have any "tired feeling" and "under the weather," as the majority of people tell about their feeling. I have no aches and pains because the Magnetic vibration of the Shields has re-established perfect circulation of my blood in every fiber of my body; hence my prefect vigor of youth at the advanced age of sixty-four years.

I desire to have this statement published that it may go out for the benefit of humanity. I shall gladly answer anyone wishing to know more of my case and the nature of this statement.

I am yours with love and gratitude,
N. AEBISCHER, Wausau, Wis.

We have hundreds of letters like the above, stating what marvelous results have been obtained in cases that were considered incurable in many instances. Do not be discouraged. Do not give up hope, even if you have been told your trouble could not be cured, as Nature's methods are wonderful and many cases are restored where medicine has failed to give beneficial results, as shown by the indisputable proof that we will supply you. Investigate our claims, for it is a duty that you owe yourself. All that we ask is for you to write us and send a complete description of your case and let us prove to you what has been done in some cases.

We will send you FREE OF CHARGE our new book, "A PLAIN ROAD TO HEALTH," by C. I. Thacher, M. D., and will advise you just what application of Magnetism will be required for your case. Write us fully to-day and we will take the same careful pains to advise you as if you called at the office and saw us in person.

WARM FEET A pair of FOOT BATTERIES, the very smallest shield we make, worn in the shoes, will produce warm feet and convince the most doubting skeptic of the curative value of Magnetism. They are good for Rheumatism, Cramps, Sore Feet, and all irregularities in the feet. $1.00 a pair, or 3 pair for $2.00. Send size of shoe when ordering FOOT BATTERIES. Write to-day and let us assist you all we can by Free Advice.

THACHER MAGNETIC SHIELD CO., Inc., Suite 272, 169 Wabash Avenue, CHICAGO, ILL.

The Curtis Bill.

Washington dispatches state that the bill of Senator Curtis, designed to force a settlement of the potash controversy, will be again introduced at the special session of Congress. While this bill, which amends the law relating to meat inspection and importation of adulterated food, is skillfully drawn to arouse the patriotism of the heedless, the only purpose of it is, frankly stated, to be to aid the fertilizer combination, and there is little likelihood that its provisions would be invoked in the aid of any other interest.

Before the bill is passed it should be amended so that its provisions cannot be invoked or applied in behalf of any trust, any corporation commonly known to be or to act as a trust, or any association of interests intended to control prices or to act in restraint of trade.

So far as the potash situation is concerned, the American farmers can choose between the German Syndicate, which has been placed under the most rigid government control in regard to production and prices, and aims to increase its American trade by selling direct from the mines to the farmer at reduced prices, or the American Fertilizer Combination, which is under no control of any kind and aims to restrict the consumption of potash, because it finds it far more profitable to control the farmer to pay excessive prices for his plant food in the form of filled mixed goods, containing not what is best for the soil and crop, but what will yield the biggest dividends on the grossly watered stock of the fertilizer companies.

Some Spring Work in the Garden and Orchard.

There are a few items of work in the garden and orchard in the spring that are are of great importance to the farmer. The right doing of these will mean a very material increase in profits. Because they are wrongly done, or not done at all, is a factor in small crop production.

There is no spading work or cultition work that must be done in the small fruit plantations and around the orchard trees. The writer has seen this work so illy done that damage rather than good must have resulted. He remembers one good-sized plantation of currant bushes that a farmer had spaded around every spring. The man that did the work had no notion of root systems, and so each spring went in and spaded up the ground to the depth of the spade. It thus resulted that every spring were cut off all the young roots that had been formed the summer before. The farmer applied large quantities of manure to this patch, but got only a relatively small crop of currants. He made the mistake of cultivating deeply where only shallow cultivation should have been given.

Spading around apple trees does not generally give this bad result, as the roots systems have most often extended far beyond the little circle spaded. However, young trees may be injured by too deep spading. The writer remembers a case where a man moved onto a place where there were many cherry trees that had never been spaded about. He thought they should be brought under the method to which he always had been accustomed; so he spaded them good and deep. The surface roots were mutilated and multitudes of small rootlets were cut off. The early spring rains were followed by a drouth, and the trees spaded about lost many of their limbs from the leaves dying. The roots were unable to take up enough moisture and plant food to supply all the branches. The result was a lot of trees, not one of which looked healthy. The spading had been too deep. When trees are not cultivated at all their roots tend to form near the top of the ground, and deep cultivation or spading is sure to work injury.

The same thought may be carried into the garden, where much cultivating of various kinds has to be done. When the garden plants have gotten a part growth and are filling the ground with roots, care should be taken to have all cultivation shallow, just deep enough to keep the weeds down and the top crust broken up. Not a thing will be gained by deep cultivation or deep hoeing or spading. Don't hire any man that comes along and tell him to go out and spade the weeds under. He will destroy enough roots to more than offset the good he is supposed to do.

To keep the ground in the orchard and garden clean, the cultivation should be attended to before the weeds really get started. The working of the soil will not then need to be deeper than an inch. It was this necessity for light cultivation that brought into existence the large number of implements known as weeders, some of them being small, to be worked by hand, and some large to be worked by horses. Such implements are of great value because they kill the weeds and yet save the roots of the plants.

FORESIGHT IN FARMING

In every business, foresight plays a vitally important part. Lack of it encourages failure, while presence of it furthers success. And so it is in farming, for farming is now the world's biggest business.

Foresight simply means the ability to see things beyond today, or tomorrow, or next week. It means thinking about this year's harvest—now.

Thousands of farmers are aptly demonstrating their foresight by looking over their present equipment. Those who are doubtful of the efficiency of their machines; who are not sure they will work uninterruptedly through another season are getting new machines. They know that they would need new machines in a year or two anyway. They have foresight enough to see that it does not pay to take chances of delays from breakdowns when the grain is ripe.

The same foresight that prompts these up-to-date farmers to select harvesting machines now, is also prompting them to select I H C Harvesting Machines. They know that these machines are right. The test of time has proved it. They have won their way to the top by their work in millions of harvest fields throughout the world.

Champion McCormick Osborne Deering Milwaukee Plano

All six are uniform in quality—each the best that long experience, correct principles, high grade materials, and skilled workmanship can produce.

I H C Service Bureau

The Bureau is a center where the best ways of doing things on the farm, and data relating to its development, are collected and distributed free to every one interested in agriculture. Every available source of information will be used in answering questions on all farm subjects. If questions are sent to the I H C Service Bureau they will receive prompt attention.

If ever necessary, exact duplicates of any part of each machine may be secured at your dealer's promptly. With any machine in the I H C line you can be sure of the harvest, and your profits.

It is the I H C resources—available ore mines, steel mills, timber lands, and saw mills, and the unequalled buying power, and output and manufacturing facilities—that insure the highest degree of efficiency in every I H C machine turned out.

Summing it all up in a "nutshell"—when you buy an I H C Harvesting Machine you are backed by many years of experience, by an organization that has the reputation of fair and honest dealing with farmers everywhere—a reputation that in itself is assurance of the highest possible quality.

Every day now brings you nearer and nearer to the real work. Every day from now on you will be busier and busier. Why not go to the I H C local dealer now—today? See the I H C harvesting machine that is best adapted to your use. Let the dealer explain all the facts to you. Then make up your mind to be ready for the harvest with the best equipment that money can buy. Do not overlook the very complete lines of haying machines and tools.

Be careful of your binder twine, too. Whether you want Sisal or Manila get the best. You will find that the I H C brands—Champion, McCormick, Osborne, Deering, Milwaukee, Plano, or International—in Sisal, Standard, Manila, or Pure Manila—are absolutely dependable.

Be sure you see the I H C local dealer. But if not convenient, mail us a request for any of the I H C catalogues and for any special information you desire.

Our Grape Premium.

Just at the right time we are enabled to make a special subscription offer that ought to bring in ten thousand subscribers in thirty days. The proposition appears on page 29. We are offering the Ladies' World for one year; The National Farmer and Stock Grower for one year; and eight two-year-old grapevine plants that are just ready to plant, all for one dollar. They are two-year-old vines from the best Chautauqua vineyards. The Ladies' World is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. The National Farmer and Stock Grower is the good stand-by; does not claim to be everything, but a clear-cut, practical, useful and interesting publication of value on any farm. We hope our readers will look up page 29 and act quickly.

The Corn Market Situation.

Having reached a low level in September directly it was known that the crop was enormous, the corn market has remained within five cents a bushel where it was.

On March 31st, at Chicago, corn for May delivery was quoted at 47½ cents a bushel, being 14¾ cents lower than a year ago. This is all the market information that is worth considering, except that the July quotation at 49⅛ cents and the September quotation at 50½ cents indicate that those who are best posted do not expect any further decline.

The United States Department of Agriculture reported that on March 1st of this year 1,265,634,000 bushels remained on farms, against 1,050,865,000 bushels a year ago and a ten-year average of 953,100,000 bushels. These figures are large, yet as before stated it appears that a decline of about 15 cents is all that the large crop calls for.

The Oats Market Situation.

The two large crops of oats in succession appear to have cost the farmers a clean 15 cents a bushel in price. Other influences are having a depressing effect on all grain markets. It is safe to presume that no farmer will sell oats at present prices unless he needs the money and has nothing else to sell.

According to the Department of Agriculture, on March 1st farmers had on hand 421,535,000 bushels of oats, against 363,159,000 bushels a year ago and 317,985,000 bushels on hand as a March 1st average for ten years. Considering that oats are figured at 32 pounds to the bushel, the actual weight is not large.

Oats are so low in price that it is hardly probable that there can be any further reduction in price; yet the traders are not at all inclined to look for an advance.

On March 31st the May option on the Chicago Board of Trade was quoted at the close at 30⅜ cents a bushel, or just 13 cents lower than last year. The July quotation closed at 30⅞ cents a bushel, or 10⅞ cents lower than last year, and the September quotation closed at 29¾ cents a bushel, or 9¾ cents lower than last year.

Quick Wealth In The World's Richest Wheat Lands

The Country Where The Railroad Works For The Settler

Automobile Stuck In One of the Wonderful Wheat Fields of Canada. *The Land That Grows Fortunes*

Let the Grand Trunk Pacific Select Your Farm and *the Soil Pay For It With First Crop*

10,000 Settlers Wanted at Once

Free Farms For Those Who Act Quickly, Read the Following, Then Write for Particulars

The Grand Trunk Pacific Ry. will assist to locate each of the 10,000 Farmers who apply at once.

One thousand miles of the Richest Agricultural land in the world ready for the plough on the main line of this new gigantic trans-continental railway.

Soil equal in fertility to that of the Great American Corn Belt. **First crop frequently pays all costs of the farm. Many pioneers retired with fortunes in five years.**

A Recent Home Seekers' Excursion under direction of the Grand Trunk Pacific Ry. carried 189 persons *of Whom 185 purchased and settled.* Much of the best land can be acquired **free** by homestead. To see means conviction and conviction means **Land,** a **Living** and **Wealth** for you.

The Grand Trunk Pacific Ry. has nothing to sell and can only prosper as those who own and cultivate property along its right of way prosper and to this end the best brains and millions of dollars of capital and all its organized facilities are for your use in selecting a home that **will make you independent.**

The independent man of today is the farmer. He supports the world and commands its wealth.

This is your opportunity to **let a great corporation do your work and** through its influence **earn your living. Be a master of the wheat lands. Act at once.**

The time is coming when this opportunity will pass and the **land you can now acquire free** or at little cost will bring $100 to $200 per acre. This great country must be settled at once and those who apply now will have the choice of location and will profit through quickly advanced values in land while **piling up annual fortunes from Ready Money Crops** of Potatoes, Onions, Vegetables, Berries, Alfalfa, Field Peas, Timothy, unsurpassed anywhere and the World's most wonderful crops of Wheat, Oats, Barley and Flax. **Send for free book "Farming, Ranching and Social Conditions in Western Canada."** It tells all about the soil, markets, social conditions and the quickly made fortunes in this land of opportunity. **Address for particulars W. P. Hinton, G. P. A. Grand Trunk Pacific Ry., Room 26, Union Station, Winnipeg, Manitoba, Can.**

Why the Grand Trunk Pacific Ry. Wants You

This great railway system has been built by the Grand Trunk Pacific that these most productive of all agricultural and grazing lands could be in immediate touch with the world's cash markets. This is the last **mammoth body of land upon the continent open for settlement.**

This railway company has nothing to sell, and is only interested in making you **successful,** through which success its freight and passenger traffic will be increased to the gigantic proportions assured for it by the wonderful wealth of the country. The interest is mutual.

The 10,000 settlers now advertised for will have every aid that the money, brains and unsurpassed resources of this corporation can supply, that each may be located to the best advantage that his needs and preferences demand.

Every man and woman that wants independence without years of sacrifice should write at once for full particulars.

What others have achieved before this railway was built and without its help, you can surely accomplish with its co-operation.

Of the millions of acres available, some of the best can be acquired by homestead. Other tracts can be purchased upon your own terms.

Climate ideal. Excellent schools and churches. Good roads and the cash markets of the world with unsurpassed transportation facilities.

Water For Our Hogs.

In our thirty-five years of breeding pure-bred swine we have tried to give our herd whatever we thought was best for their rapid development and have studied all the various rations that can be made up of the grains and grasses grown on the farm, as well as those that could be made from the various by-products of the mills. These we have fed in various ways, sometimes dry, generally mixed with water into a rather thickish slop or mush. We have sometimes been able to get separator milk from the creamery, but this is generally so stale and so diluted with the washings of the factory that it is so unfit for feeding a good pig that we abandoned it some years ago. We have many times tried to convince ourselves that with a wet feed our pigs did not need especial attention given to waterings, yet we have also given up this erroneous idea, and I presume that there are "others."

Now, I want to assure my fellow-breeders that pigs as well as older hogs will drink plenty of pure cold water even in winter, and when fed on a feed mixed with either water or milk. During the present winter we have fed wet feed in the morning about eight o'clock, warmed by a steamer, and at one-thirty o'clock in the afternoon we have driven our feed wagon over the entire line of pens, and find that our forty brood sows with about sixty pigs and hogs of various ages have been drinking almost two barrels of pure, fresh, cold water from the well, and have seemed to enjoy it as much as they did their warm feed in the morning. At night we gave them a feed of ear corn.

There is nothing that will quench thirst but water. I myself love to drink a glass of sweet milk at dinner, but I often find myself taking a drink of water almost immediately after it. The same is true of animals. The hogs may have just been fed even with warm, wet mixture, and yet they will turn to the other trough and take a few swallows of cold water. If this is not evidence enough that hogs need water even in winter, then I am mistaken. The question is how to furnish fresh water at all times.

It is said in Dieterich's Book on Swine that about one-half of a pig's weight is composed of water. A growing pig contains more in proportion, however, than does a mature, fat hog in proportion to weight.

To grow young pigs and get best results they must have sufficient water at all times or at frequent intervals during the day. If possible, it would be far better to have good, pure, fresh water where the pigs can go at will and drink as often as they wish. Pigs, like sheep, do not drink much at a time, but if water is where they can go at will, they will be found drinking a little quite often.

One will often notice pigs drinking from filthy pools or puddles, where the water is not fit for a well-bred pig to drink. This is where germs often get into the system of the animals and cause trouble, and soon disease follows.

I would urge that breeders and farmers who are trying to get good results in swine growing would give this matter of good drinking water for their animals more thought, and I feel satisfied that it would be found that better results would follow.

There are and have been many self-watering devices on the market that at first sight looked good, and the writer has had experience with most of them, but without entire satisfaction, as those that have valves are sure to get clogged by dirt from the snouts of the pigs, settling in the cup and clogging the fountain, which of course causes the fountain to empty itself quickly. Then there are those in which a hog or pig can get its feet, which also clog the works. There is good money for the man that gets up a self-watering device in which there are no valves or in which a pig cannot get its feet, and especially if such can be made so that it can be used in cold weather without freezing. We are looking for something along this line, and I believe it would meet with general demand among both breeders of pure-bred swine and also with the farmers and feeders for the general market, and particularly with big feeders, who can run large numbers of hogs in one pasture or feed lot. But for breeders who keep only a sow and litter of five to eight in a small grass plat, as do most of us, it would require many self-watering fountains to do us, yet I believe even then it would pay, and pay well.

Think over these matters about watering our hogs and I believe many will awaken to the fact that they have been neglectful in this important part of the caring of their herds.—A. J. Lovejoy.

The Howard Watch

Every one concedes that the railroad man must have an accurate watch.

His business requires it.

The Time Inspectors of 180 of the leading railroads of America have officially certified and adopted the HOWARD Watch.

But how about the man in any other calling?

Why should he be content with anything less than the standard of timekeeping by which the great railroads are run?

The HOWARD was the first American Watch. It was brought out in 1842—and it has been carried by more distinguished Americans than any other watch in the world.

Most men who buy HOWARDS are simply prosperous citizens who take pride in owning the finest thing to be had.

Then, too, the HOWARD has an *investment value*. What other watch do you know that will serve a man's lifetime and then represent a substantial part of its original price?

A HOWARD Watch is always worth what you pay for it.

The price of each watch—from the 17-jewel (*double roller*) in a Crescent or Boss gold-filled case at $40 to the 23-jewel in a 14-k solid gold case at $150—is *fixed* at the factory and a printed ticket attached.

Call on the HOWARD Jeweler in your locality and talk with him about the HOWARD Watch. Not every jeweler can sell you a HOWARD. The jeweler who can is a good man to know. Drop us a postal card, Dept. QQ and we will send you "The Story of Edward Howard and the First American Watch," an inspiring chapter of history that every man and boy should read.

E. HOWARD WATCH WORKS, Boston, Mass.

Sheep Sales at St. Louis.

In the Clay, Robinson & Co. Sheep Circular of March 30th we find it mentioned that the market at the St. Louis National Stock Yards was considerably higher than any of the other markets. This firm issues a market circular every week especially for sheep feeders. Write for it to Clay, Robinson & Co., National Stock Yards, Ill.

Read about the Southern cattle on page 21. They were sold by Clay, Robinson & Co. at St. Louis.

ONCE IN A LIFE TIME

is often enough to do some things. It's often enough to buy a wagon if you buy the right kind. The

ELECTRIC HANDY WAGON

lasts that long under ordinary conditions. First, the life of a wagon depends upon the wheels. This one is equipped with our **Electric Steel Wheels**, with straight or stagger spokes and wide tires. Wheels any height from 24 to 60 in. It lasts because tires can't get loose, no re-setting, hubs can't crack or spokes become loose, felloes can't rot, swell or dry out. Angle steel hounds.

THOUSANDS NOW IN DAILY USE

Don't buy a wagon until you get our free book, "Wheel Sense."
ELECTRIC WHEEL CO., Box 40 Quincy, Ill.

The Battle With Weeds.

With the coming of spring come the weeds, which must be fought throughout the season. The weeds are stronger than most of our plants, because the weeds in any section are there because it is adapted to them, while the cultivated plants are not so well adapted to the soil, and would often be exterminated in a year or two by the weeds if not protected by man.

The weeds that have been long in a locality have great power of endurance. Sometimes plowing under weeds and their seeds will preserve the seeds for subsequent years. In some cases seeds have been in the ground for twenty years or more and then produced plants when the ground was plowed up.

The writer helped plow a grass field that had been in sod for so many years that none of his acquaintances remembered the field as other than a hay field. Tradition said that formerly the land there had been ccovered with nettles. It was plowed up and planted in potatoes. But the nettles got up about as soon as the potatoes did, and soon the whole field was thick with them.

When weeds that are in seed are turned under, it should be so shallow that the seeds will rot as well as the plants that bear the seeds. The man that goes into a weedy field and plows it under deep is likely to have the work to do over again in subsequent years.

Where there are no old weed seeds in the ground the spring plowing of weeds can be deep if the weeds have no seeds left over from the previous year. This, however, is the case. Therefore, for weed destruction to be effective it is better to let the seeds sprout and then turn them under. For weed destruction spring plowing is better than fall plowing, as there are more ripe seeds on the ground in the fall than in the spring.

The most successful agriculturists we have wage a terrible warfare on weeds. The writer has in mind a very successful peach grower, whose orchard covers hundreds of acres. His weeders are going from early spring to late fall, at fixed intervals. He boasts that a weed never appears in his peach orchard. The ground is covered with a blanket of pulverized soil and in it the roots of his trees find no other roots to take the moisture and the plant food that the tree roots are seeking. Therefore the thrift that in some orchards appears in the weeds, in this man's orchard appears in the trees and their fruit. It is not surprising to learn therefore that in one year this man made $15,000 net from his orchard.

One of the saddest sights, agriculturally speaking, the writer ever saw was a five-acre onion field where the owner had neglected the weeds. He found other work pressing and let the weeds go as long as considered possible. Then just as he was about to attack the weeds with the cultivators, there set in a long wet spell with rains and high temperature. It was a fine thing for the weeds and soon they overtopped the onions and dwarfed them. A little while after the mowing machine was seen in the field and the ground was plowed for some other crop.

The Battle Against Weeds.

The fight against weeds in grain crops is becoming very much the same as the fight against the diseases and pests afflicting fruits and vegetables. The sprayer is brought into play and the grain crops are relieved of the uninvited competitor for the earth's fertility by the destruction of the weeds that are sprayed to death, while the grain touched by the spray is not hurt in any way. On many large farms weeds are destroyed with a solution of sulphate of iron applied as a spray. This practice is a paying branch of agriculture. The first weed to receive attention was wild mustard, then quack grass, Canada thistle, wild radish, dodder in clovers, etc. Sulphate of iron is a by-product of wire manufacture, and is sold cheap in bags. This subject of spraying weeds is best explained by a paper entitled "Eradication of Farm Weeds." It is issued free to farmers by the American Steel and Wire Company, of Chicago, Ill.

DAVID BRADLEY

Complete With Fenders and 4-Shovel Pin Break Gangs, **$21.95** Order No. 32X65

R. F. D. No. 6, Box 2, Milford, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—My Little Jap is far ahead of any cultivator I have ever seen. The seat bar guiding motion is the best thing out, and the advantage of being able to raise and lower the gangs with the balancing lever after having set them to exact depth with the raising levers makes it superior to all others. This is saying a good deal, but it's true. The good features of the Little Jap make me feel like striking out with it and working in fields along the road, so as to convince people of its superiority over all other makes.
Yours truly,
CHARLES TANSEL.

The David Bradley LITTLE JAP CULTIVATOR

is your own idea of what a cultivator should be; the perfect implement you have been wishing for since you plowed your first field. So far ahead of any other that it really should be called by some other name than cultivator. Every other manufacturer hoping for success is trying to copy its exclusive patented features. We only name them here. Our catalog tells all about them.

Pivot Axles and Seat Bar Dodging Lever; easiest, quickest, widest dodge. A clear view of the row at all times. The one successful cultivator for hillside work. No drifting; gangs work parallel and at even depth.

Balance Frame; adjustable for rows of any width. Seat and stirrups adjustable for boy or man, and machine adapts itself to heavy or light weight operator.

Depth Regulating Lever for each gang, and **Combined Gang Raising and Balancing Lever** that lifts both gangs at end of row without disturbing depth adjustment.

Short Hitch and Direct Draft; easy on team. Draft helps lift gangs, also keeps shovels in ground.

Sixteen Styles of Gangs. Fin break or spring trip shovels, surface blades, spring teeth or discs. Levelers, rakes and other attachments. Buy one cultivator and as many kinds of extra gangs as wanted.

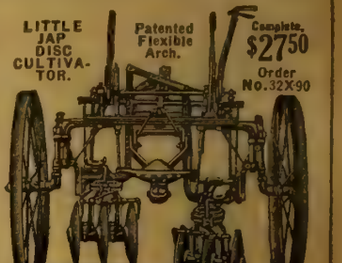
Wheels 42 inches high; wide tires; staggered spokes; long distance dustproof grease retaining hubs.

Materials throughout the best that money can buy. Highest grade steel and malleables used. $100.00 couldn't make it better.

Send for our Book of David Bradley Farm Implements, or see our big General Catalog for complete descriptions and prices of all styles of Little Jap Cultivators and special attachments. Other styles of Bradley cultivators from $9.93 up.

We can always furnish repairs for any David Bradley implement made since 1832 and ship the day we receive the order.

LITTLE JAP DISC CULTIVATOR. Patented Flexible Arch. Complete, $27.50 Order No. 32X90



R. F. D. No. 1, Mt. Vernon, Iowa.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I am fifty-two years old and did my first plowing with a single shovel plow, then the double shovel, next the walking cultivator and then the sulky plow. Have used more different kinds of cultivators than most men, and think I can plow corn as good as any man living, and I must say that the Little Jap is the best I ever used for good work and easy running, both on man and team. It is the only cultivator for the hired man. You regulate it and send him into the field and he has simply got to plow corn.
Yours truly,
A. H. KNAPP.

SEARS, ROEBUCK AND CO. CHICAGO

The Barley Crop.

Brewers are getting anxious about the malted barley crop. They have been the only buyers of any importance and for years have kept the price in cities down to from sixty-five to eighty cents a bushel. Farmers have received fifty to sixty-five cents a bushel. Towards the end of March, speculators of this year appeared to have cornered the market and brewers have had to pay up to $1.25 per bushel. This, it is said, will put up the wholesale price of beer.

California, Minnesota, Wisconsin, South Dakota and Iowa, in the order named, were the principal states producing barley in 1910, and these states produced 78 per cent. of a total crop of 162,227,000 pounds, or about 8,000,000 bushels less than during the previous year. But all states, more or less, are raising barley, and it may be a good idea to look closer into this paying crop.

DEERE & COMPANY, MOLINE, ILL.

Modern Abattoir in German China.

It is doubtful if in any city in the world the slaughtering of cattle for consumption is conducted under more sanitary and painstaking auspices than in Tsingtau. One can with perfect confidence eat the meat bought from the slaughtering plant, for every head is killed and prepared for the market under the personal supervision of a German qualified to act in that capacity. Soon after the occupation of Kiaochow by the Germans the necessity for the establishment of an abattoir along hygienic lines became apparent. The German Reichstag appropriated money to build the institution, which was done under the control and supervision of competent veterinarians, and it stands to-day a model of its kind in the Far East on a site far removed from the dwelling part of the city and close to the sea. The city's electric-power station and the tallow and hide warehouse of an American firm are its only neighbors. The refuse is carried direct to the sea, and the odors never penetrate the city. This is from a report by United States Consul J. C. McNally at Tsingtau to the Bureau of Commerce and Labor.

Flax Growing a Money Crop.

Flaxseed stands up as the farm product that is outselling all other crops. The United States Agricultural Department mentions the average price, March 1, 1909, at $1.41 per bushel; March 1, 1910, $1.93 per bushel; and March 1, 1911, at $2.40 per bushel. North Dakota raised 5,778,000 bushels in 1910 out of a total crop of 14,116,000 bushels. Minnesota came next with 3,540,000 bushels; South Dakota, 3,330,000 bushels. Other states raising flax in a small way are Wisconsin, Iowa, Missouri, Nebraska, Kansas, Colorado, Oklahoma and Western Texas. The crop was 10,000 bushels short last year.

And now comes H. M. Cottrell, the Agricultural Commissioner of the Rock Island Lines, advocating that dry-land farmers take up flax culture He says as follows:

"Flax averaged one-half a crop in 1909 and one-third of a crop in 1910 for the United States. The crop was short in 1910 in the flax-growing sections of the entire world. As early as November 1st, Chicago was forced to get flax from Argentine and Calcutta. Flax is now selling at two and a half times the ordinary price, and there is not nearly enough in the world to supply even urgent demands.

"Flax is one of the best dry-farming crops for the plains whenever the soil in the spring is moist enough to secure rapid growth. When the soil is dry in the spring, flax is a poor crop, no matter how favorable the summer season may be.

"In most sections of Western Texas, Western Oklahoma, Western Kansas and Western Colorado the soil is in good condition in regard to moisture, and if the farmers will get good seed and thoroughly prepare the soil for it, they can probably make large profits with flax this year. The dry farmers of the Southwest can market their crop before the crop from the regular flax-growing sections is ready and should get the cream of the high prices.

"Flax, on the plains, will average twelve to eighteen bushels an acre in a favoable season, using good seed and thorough preparation of the soil. Flax in Eastern Colorado commands a premium because of its high percentage of oil.

"**Preparation of Soil.**—Bright, plump seed only should be used. There is much shriveled and diseased seed on the market. Diseased seed sowed once will infect the farm for years, and the winds carry this infection all over the neighborhood. Immediately before sowing, treat all seed with 40 per cent. formaldehyde. Spread the seed thinly on a floor. After the seed has been spread, mix one-half ounce formaldehyde to one gallon of water for each bushel of seed. Thoroughly sprinkle the seed with one-fourth of the liquid, shoveling and mixing the seed and sprinkle again with another fourth of the liquid and mix again. Repeat until the seed has been sprinkled and mixed four times, taking care that every seed is thoroughly dampened. Quickly shovel the seed into a heap and cover with a canvas or sacks for two hours. Spread out, dry quickly, and sow within twelve hours.

"**Seeding.**—Sow after the danger of hard frost is passed, using a drill and seeding about twenty pounds of seed per acre and putting the seed one-half to one inch deep. Broadcasting puts the seed in at uneven depths, causing uneven growth and ripening.

"Write your Agricultural College to find the nearest point where good seed can be bought."

"Would you rather buy a new barn?"

—Asks the little Paint Man

Would you rather buy a new barn than pay for painting now and then? It costs more to build a barn than it does to paint it. A barn that is painted right at the right time will last five or six times as long as one that is neglected.

A barn of wood has a certain amount of durability which is roughly about 15 or 20 years, but that same barn will last 40 or 50 and more years if painted promptly and sufficiently often to keep on protecting the wood.

Paint is a preventive—not a cure. You cannot save a barn that has fallen into ruin by painting it. You must paint it while it is new and keep it painted.

The cost of the best paint and the cost of the best painter are less than the cost of renewing a weather-beaten barn. The best paints are Sherwin-Williams Paints—easy to apply—look well—wear well.

I have written a book about these things which explains the Sherwin-Williams way of saving money on a farm better than I can do it here. Its name is "Paints and Varnishes for the Farm." A free copy will be sent you at once if you write today.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

When exports are largest it often happens that prices are the lowest. A poor condition for the producer is sometimes an elegant period for the non-producer.

The Extra Session of Congress.

To consider and pass the so-called reciprocity bill in Congress, which is the entering wedge for farmers' products to be admitted free of duty from all parts of the world, will be the main business of Congress if the President of the United States has his way about it. After the House of Representatives has received the message and has entered upon the consideration of the treaty, a gentleman named Bryan will have more influence in the House on the situation than the President, although at present Mr. Bryan, who poses as a farmer, is in favor of passing the bill.

In the Senate, however, it is different. There still remains a small majority of those who were elected as Protectionists. If they stand by their professed principles the bill will not pass. But the majority is small and some of them are what are called Insurgents, but they were Protectionists when they were elected and cannot vote for the bill except by confessing that they obtained their election under false pretenses.

We hope that the bill will not pass. We hope that from one end of the country to the other the farmers will insist upon those who advocated protection standing up for it, and if they fail to do so we hope to see a Farmers' Party organized for the purpose of relegating to private life all those legislators who vote against the platform upon which they were elected.

A Demoralizing Proposition.

If the so-called reciprocity treaty with Canada is passed by Congress it will demoralize the grain-growing farmers of the United States to such a degree that for several years there will surely be reduced grain acreage. It will cause the utmost distress in the agricultural implement trade and it will disturb the whole country. Just as farmers are receiving lower prices for their corn because they have raised the largest crop ever known; just as oats are selling below cost of production by reason of two enormous crops raised in succession; just as cattle, hogs and sheep have been reduced in market value several cents a pound by weight of the supply, this meddlesome, stupid, uncalled-for proposition is sprung upon the farmers, and by the very politicians who have preached protection for farm products. There has been a great miscalculation. It appears to be a put-up job to sacrifice the farmer in the interest of the manufacturer, and even the interest of the manufacturer is endangered thereby. For every additional farm implement sold in Canada there will be ten less sold in the United States, and the progress in the line of improved agriculture will be set back to such an extent that will be astonishing. It is not a square free-trade proposition, give and take, between this country and Canada, but a surrender of the farmers' rights without reciprocal return. The National Grange is to be applauded as the first farm organization to jump into the breach and expose it.

A Neglected Market.

Before the Sphinx Club of New York City, on March 14th, 1911, Mr. G. B. Sharpe, Advertising Manager of the De Laval Separator Company, delivered a short address, and it was entitled "A Neglected Market." He referred to the farming interest as the market that had been neglected, and he advised business men to regard the farmer as he really is today, and not as he was years ago. He spoke almost as much of the improvement in the farmer personally as he did in regard to the farmer's surroundings. He said that business men would regard the farmer as a better customer when they understood him better as a man and as a land owner whose finances were improving year by year. He spoke of the increased earning power of the farmer and contrasted the same with the comparatively small gains in recent years to be observed in the material progress of the city people. Mr. Sharpe spoke also of the agricultural press and its influence for good with the farming population and of its value to merchants and manufacturers as advertising mediums. He spoke of the trolley fine, the telephone and of improved implements as helping to bring about the superior farm surroundings, but he said nothing of the invention which it is his personal duty and pleasure to exploit, the omission probably being due to the fact that it was not the proper time or place for such an exploitation, yet he could have said, and we will here say it for him, that in hundreds of thousands of instances in this great farming land of ours the prosperity of the farmer, as evidenced in splendid herds, fine barns, magnificent homes and good bank accounts, is due to the invention of one Dr. Gustav De Laval, whereby cream and milk are separated while both are sweet and fresh from the cow. This one invention introduced into the United States less than thirty years ago took the drudgery of butter-making off the farm, established the creamery interest, adding points in quality to the butter output of the country and bringing sweet cream into business circles as a transportable product. It is but justice to the inventive genius of Dr. De Laval to say that in the history of the world no greater victory by human being was ever won in peace or war.

Our Dictionary Premium.

Our Subscription Department is advertising Laird & Lee's Webster's New Standard Dictionary. This book is worthy the attention of all of our readers. It is just the right size and no one can fail to be satisfied with it. It is advertised on page 25.

When the government has succeeded in demoralizing the farming interest there will be hard times for some of the other interests. If the bogus reciprocity bill is passed, the extra session of Congress will cost the country many millions of dollars.

St. Louis Cash Grain.

The following were the quotations for grain at St. Louis, Mo., March 31st, 1911. The prices represent cash transactions for all grades on sale:

Quote: No. 2 red wheat, 85½ to 88½c.; No. 3 red, 84 to 86½c.; No. 4 red, 78½ to 81½c.; No. 2 hard, 85 to 95c.; No. 3 hard, 82 to 90c.; No. 4 hard, 77 to 82c.

Quote: No. 2 corn, 45½ to 46c.; No. 3 corn, 44 to 45c.; No. 4 corn, 42½ to 43c.; no-grade, 39½ to 40c.; No. 2 yellow, 45½ to 46c.; No. 3 yellow, 44 to 45c.; No. 2 white, 46 to 47c.; No. 3 white, 44c.

Quote: No. 2 oats, 31c.; No. 3 oats, 30½c., n.; No. 4 oats, 29½c., n.; No. 2 white, 32 to 32½c., n.; standard, 32 to 32½c.; No. 3 white, 31 to 32c.; No. 4 white, 30 to 31c.; No. 2 rye, 93c.

Henry Fricke, of Boonville, Mo., marketed two cars of clipped Western wethers at the St. Louis National Stock Yards, late in March, averaging 110 pounds, at $4.75 per 100 pounds. These were sold on the market by Sam White, salesman for Clay, Robinson & Co.

The PROVEN MACHINES

You don't "guess" when you buy the **Waterloo Boy Gasoline Engine** and the **Buttercup Cream Separator.** They have *proven* themselves for years and are daily making good in actual service. They have stood the test of the hardest work which shows whether a machine is built to last. They have earned their right to leadership.

The Waterloo Boy

Has a clean record of 18 years of making good. Read what users say about it. See your neighbor's engine at work. You'll find these vital points proven: The simplest, most economical engine to run, starts easy summer or winter, develops the most power for its weight and rating, don't get out of order, and repair bills practically nothing.

The governor speed lever, patented mixer, improved igniter, open jacket and interchangeable parts are all strong features of superiority. The very best of material and expert workmanship give durability to the **Waterloo Boy.** We are putting out over one hundred engines per day, and steadily increasing our capacity.

The Buttercup Cream Separator

Skims down to 1-100th of 1% of the cream—and that's record efficiency. It is heavy, strong and simple in construction and has helical gears of phosphor-bronze, the hardest gear metal known. It will be on the job good as new, after your house tumbles down. It has a big, low, convenient bowl, runs light and is easy to clean. It is the separator **you** ought to have at the price you **want** to pay.

We back up the merits of the **Waterloo Boy** and **Buttercup Cream Separator** with square dealing—you can count on exactly what we say. We've never failed to keep our promises.

We guarantee both machines for 5 years.

Our catalogs tell the whole story. They are FREE. Write for them today.

The up-to-date methods of asparagus culture are in this book. Sold by Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

THE BOOK OF ALFALFA by F. D. Coburn, of Kansas. History, cultivation and merits. Its uses as a forage and fertilizer. Soil and seeding, cultivation, harvesting, storing. Alfalfa as a feed stuff; in beef making; in the dairy; for swine; for horses and mules; for sheep raising; for bees; for poultry; for crop rotation, etc. Alfalfa from A to Z. An illustrated book of 336 pages, 6x9 inches, bound in cloth. Worth a million but sold for $2.00 and mailed postage paid. We also include one-year's subscription to The National Farmer and Stock Grower.

"FEEDING FARM ANIMALS." This is a 500-page book, bound in cloth, pages 5½x8 inches, and the price is $2.00, which includes delivery by mail. There are twenty-one chapters. It covers meat and milk production, general feeding and the care of domestic animals. It is claimed to be The Most Teachable Book by far ever written on the subject of live stock feeding. Send orders to Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

CELERY CULTURE. This is by Prof. W. R. Beattie, of the Bureau of Plant Industry, United States Department of Agriculture. A practical guide for beginners and a great help to experienced celery growers. It is one of the little books that are worth their weight in diamonds. There is no line of gardening that pays better. **CELERY CULTURE** is fully illustrated, bound in cloth, 150 pages, 5x7 inches. The price is 50 cents, including mailing. Sold by Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.

SQUABS FOR PROFIT by Wm. E. Rice and Wm. E. Cox, expert pigeon fanciers. It includes all particulars of how an original investment of $50 has grown to $3,000. The illustrations are simply superb. The plans and specifications for buildings are as complete as an expert architect can make them. The book contains 118 pages, 5x7 inches, bound in cloth, and will be sent postpaid for 50 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

STRAWBERRY CULTURIST by Andrew S. Fuller. This book contains the history, sexuality, field and garden culture of strawberries, forcing or pot culture. How to grow from seed, hybridizing and all information necessary to enable everybody to raise their own strawberries, together with a description of new varieties and a list of the best of the old sorts. The strawberry crop of the United States is worth more than all other small fruit crops combined. The **STRAWBERRY CULTURIST** is illustrated, 60 pages, 5x7 inches, bound in flexible cloth. Price, 50 cents, including one-year's subscription to The National Farmer and Stock Grower. Address, Hale Publishing Co., 3550 Vista Ave., St.Louis,Mo.

THE GOLDEN STREAM, issued by the International Harvester Company of Chicago, Ill., and mailed free on request of farmers and dairymen. This is a delightful publication of sixty-eight pages, devoted to dairy subjects. It contains sixty-five illustrations, consisting of champion dairy cows, barn interiors, milk houses, dairy herds, besides valuable matter for general farmers and dairymen.

PASSED OVER THE RIVER.

Thomas Loonan, for forty-seven years a prominent farmer and stock feeder of Hudson, Iowa, entered his rest early in March. He was born in Kings county, Ireland, in the year 1833, and came to America in 1864.

On February 7th, William N. Whitely, of Springfield, Ohio, passed to his rest in his 77th year. He was inventor, manufacturer and philanthropist. In 1867, in competition with Benj. H. Wardner, in a contest of reapers, he unhitched his horses and ran his own reaper, the Champion, from one end of the field to the other. He was a giant among men and the founder of the industries of Springfield, Ohio, and as a field demonstrator of agricultural implements never had an equal.

Captain Lee Hall died at San Antonio, Texas, on March 17th. He was always interested in the ranch business, but he was famous as a Texas ranger. Captain Hall was born in 1849 in North Carolina and arrived in Texas in 1879, where he soon became at home on the Mexican border, where he was a terror to rustlers.

Colin Cameron, prominent breeder of Hereford cattle, died March 6th at Lochiel, Arizona. He was manager of the San Rafael Cattle Company and one to whom much in the improvement of handling range herds should be attributed. He was foremost in the work done by cattle raisers' associations for the good of the interest he was identified with.

Is There *Grain* In *Your* Straw Pile?

All threshing machines are not alike. There is one different from all others. It has a different way of taking the grain out of the straw. **It beats it out** just as you would do by hand with a pitchfork. All other machines depend upon its dropping out.

This one different machine is the Red River Special and you should insist upon having it do your threshing. It will save all your grain and waste none of your time.

It saves the Farmer's Thresh Bill.

It has the Big Cylinder, the "Man Behind the Gun," the patented grate and check plate, the greatest separating device ever built.

The Big Cylinder drives the intermingled straw, chaff and grain against the separating grate, **beating** the grain through where the check plate catches it and delivers it to the grain pan and mill.

Ninety-five per cent of the grain is taken out right there.

The straw goes over upon the shakers which hold it and **BEAT** it until all the grain is **BEATEN OUT.**

In all other kinds the straw is hurried out of the machine and the grain is expected to drop out.

It doesn't. Thousands of green straw stacks every year loudly say it doesn't.

The Red River Special saves all this. Insist upon its doing your work this year.

It will save your thresh bill. **Full particulars furnished if asked for.**

To Whom It May Concern:

I, J. Knudson, farmer, of McHenry County, North Dakota, do depose and say that during the summer of 1908 I bought of Nichols & Shepard Company a threshing outfit, consisting of one 20 horse power, double cylinder traction engine and one 32x52 Red River Special Separator with wind stacker, self-seeder and weigher attached.

That on or about August 23, 1908, I started this outfit near a stack of old straw that had been threshed in 1907 by a——— separator, and to stretch the belts on the new machine I caused a small load of old straw from the stack in question to be run through the new machine, and was surprised to get over sixteen bushels of oats from this load of straw.

I afterward threshed out the balance of this stack and got 347 bushels of grain.

(Signed) JAMES KNUDSON.

Subscribed and sworn to before me, a Notary Public, in and for McHenry County, North Dakota, this 6th day of Feb. 1909.

(Seal) J. EDGAR WAGAR, Notary Public.

My commission expires March 27, 1914.

NICHOLS & SHEPARD COMPANY **Battle Creek, Michigan**

Builders of Threshing Machinery and Engines

The death of Captain John A. McBride, of Scotland county, North Carolina, a leader in agriculture, is mentioned by the Farmer and Mechanic as a great loss to the state, saying: "Captain McBride was a pioneer in good farming. In the year 1909, on ten acres of land, he produced thirty bales of cotton, weighing five hundred pounds each, to the acre. The reason of this was that he studied farming and understood it and mastered it just as a doctor masters medicine, or a lawyer masters law. His life and example were worth much to the state, and yet his modesty was as conspicuous as his worth."

At his home in New York City, on March 16th, at the good old age of ninety-two years, the veteran horseman, Frank Work, passed to his rest. He was of national prominence as owner of valuable trotters in the days of Goldsmith Maid and Dexter and as an associate of Robert Bonner, Wm. H. Vanderbilt and others of the old horse-loving brigade.

GENERAL FARM NOTES.

The New York Produce Review reports that the steamer Oceanic, which left New York for Southampton March 3, carried 5,514 packages of dressed poultry, valued at $39,360, and the St. Paul, which left for Southampton March 10, had 2,444 boxes, valued at $14,707.

During the year 1910, Chicago received 272,754 tons of hay; St. Louis, 242,481; Kansas City, 301,408; Cincinnati, 189,202; Cleveland, 81,921; Peoria, 47,819; Minneapolis, 46,330; and Milwaukee, 40,102. These are called the principal primary markets.

There are now 77,314 farms, averaging 333 acres to the farm, in South Dakota, against 52,622 farms of 332 acres ten years ago. The great increase, according to the census, is in farms of 100 to 174 acres, although there is a considerable increase in larger farms.

During the year 1910, at St. Louis, 3,878,462 bushels of potatoes were received and 1,842,905 bushels were shipped out, thereby placing local consumption at 2,035,557 bushels, besides some not enumerated coming from local market gardens.

In the period between January 1st and March 31st, 1911, New York received 934,595 cases of eggs, this being an increase of 332,974 cases over the same time in 1910. No wonder the market is lower this year.

Mrs. Ralph Hershfelt, of Carlyle, Ill., has Single Comb Brown Leghorns of a superior strain and is selling eggs. Her Buff Orpingtons are also true to type, and cockerels and eggs are both offered at reasonable prices.

THE LAND INTEREST.

It was reported from Galesburg, Ill., early in March, that actual sales of farms in one week amounted in gross total to one million dollars. The farmers who sell out are said to be moving to Canada, to the West, or to the Southwest, where lands are cheaper.

Ten acres of land in Southwest Texas sold for one thousand dollars an acre. There were ten acres near League City, in Galveston county, and known as the Yarborough Orange Grove. Three and a half acres are bearing Satsuma orange trees, six acres of two-year-old trees and almost one acre devoted to one-year-old budded stock. The improvements consist of a two-room house and a small barn. The owner sold $650 worth of oranges off the tract last year, and the estimated crop this year will be worth $2,000, with increasing possibilities yearly.

O'NEIL IMPLEMENT CO.,
La Salle, Ill.,

Have on the market **CONSERVING** Carriers and **EXPANSION** Spreaders that increase the value of **MANURE** and save so much time and labor that they are the best-paying investment a stock or grain farmer can add to his equipment.

The Acetylene Light.

On page 30 will be found an article entitled "Home-made Gas Light From Crushed Stone." This is an interesting subject addressed to farmers, and, surprising as it may seem, there are 180,000 farm houses already illuminated with this brightest, whitest and cleanest of all lights. For further particulars address Union Carbide Sales Company, Dept I 56, 167 Michigan Ave., Chicago, Ill.

The first Elgin butter quotation in April is 21 cents a pound, against 31 cents a year ago.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1911 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

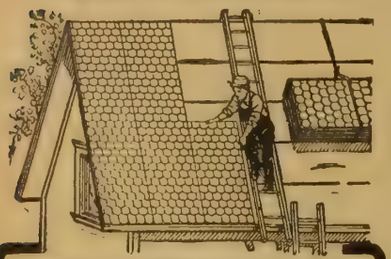
Buy This Money-Saving "REO" Steel Roof



Saves its cost five times over. Fireproof. Lasts longer than building. Never needs repairs. Outwears four wood shingle roofs. Wears six times as long as 3-ply composition roofing. Reduces fire insurance rates 10% to 20%.

Edwards "REO" Steel Shingles

are easy to lay. Just hammer and nails. No soldering. No tarring. Comes in stamped sheets of finest Bessemer Steel, 5 to 12 feet long, width 24 inches, either painted or galvanized.

Buy at factory-to-user prices. We pay the freight. We are largest makers of iron and steel roofing. Ask about our $10,000 Guarantee Bond Against Lightning. Write today for our new Free Money Saving Catalog 457. Send us the dimensions of your building.

THE EDWARDS MANUFACTURING CO.
407-457 Lock St., CINCINNATI, OHIO (44)

A Jersey Dairy Queen.

Sophie, 19th, of Hood Farm, Lowell, Mass., has just finished a test which she began at the age of four years and eleven months. She is the champion cow for milk and butter production between four and five years of age. She gave 14,373 pounds 3 ounces of milk, with butter-fat content 5.986 per cent., from which the butter estimate is 1,011 pounds 5 ounces. Her milk sold at retail at 10 cents a quart; brought $718.65, and her feed bill was $173.48. Her daily milk average for the year was 39.06 pounds, and her daily butter average 2.12 pounds. She consumed 14.9 pounds of grain a day. The cost of feed was estimated as follows, per ton: Bran, $28; corn meal, $28; gluten, $30; cotton seed, $32; alfalfa, $22; hay, $20; silage, $3.00; beets, 40 cents per bushel, and pasture $3.00 per month.

Cow Stable Notes.

It is as easy to keep the cow stable clean as to allow it to be dirty much of the time. We notice that in some stables the manure is removed only once a day. This is a bad practice, for the air becomes permeated with emanations from the manure. Clean it away as soon as it drops, if you are about, or anyone else, to do the work.

In the large dairies engaged in the production of high-priced milk, the manure is removed as soon as it is dropped. The result is that the air never becomes foul, and a blind man passing through the stable would never suspect that he was passing through a dairy barn.

It often takes more time and effort to do a thing the wrong way than it does to do it the right way. This applies to almost everything about the dairy barn.

A dairyman engaged in the production of certified milk says that he is getting white-headed trying to get men suitable to milk cows and keep dairy things as they should be kept. This is a condition that plays into the hands of the farmer that has only a few cows. His supply of help comes largely from his own family and is therefore reliable. When he makes up his mind that he wants to, he can compete successfully with the big dairy company that is trying to produce clean milk under adverse circumstances, so far as expert help is concerned.

The platform where the cows stand should be made so short that the droppings fall into the trench behind the cows. Their lying place will be then clean at all times. The man whose cows go into the pasture in the spring with dried manure plastering their flanks has not yet learned how easy it is to keep his cows clean.

The cow's flanks and udder should be washed before every milking, whether the cows are dirty or not. The washing will prevent the dust from being shaken into the milk The dust carries germs that hasten the souring of the milk. The dust itself is partly the cast-off material from the body, and this cast-off material is being constantly pushed away from the skin of the cow. Then, too, the washing keeps the loose hairs from falling into the milk, and the spring is when the cow's hairs become loose.

There are too many dark cow stables. They can be easily lightened. The simplest way is to make the present small windows large. The windows behind the cows should be of good size and placed at frequent intervals. Light and air coming in behind the cows will help to keep the stable in a sanitary condition.

The old scheme of throwing the manure out of a little window behind the cows should be everywhere abandoned. The manure that is piled up in the open air all winter is partly wasted by the sun, rain and wind. Make other arrangements for the manure accumulations and have them out of sight, if possible. A cement-lined manure receptacle will prove valuable.

The Bradley Implements.

David Bradley was a noted agricultural implement manufacturer. The entire plant he established is now owned and operated by Sears, Roebuck & Co., and every implement made heretofore is yet made and sold direct from the factory. Mention this paper and write Sears, Roebuck & Co., Chicago, Ill., for the book of David Bradley farm implements. See page 6.

A Guernsey Heifer Record.

At the Iowa Agricultural College the Guernsey heifer, Imp. Rougé, II., of the Brickfield, commencing work at 2½ years old, finished the year with a record of 10,962 pounds of milk, 5.59 per cent. fat, giving butter-fat to the amount of 611.08 pounds, equivalent to 713.76 pounds of butter. She is credited with $214.13 for butter at 30 cents a pound, and $25.87 for skim milk at 25 cents a hundred pounds. The total cost of feed was $88.91, leaving a net margin of $151.09. She is also entitled to credit for the value of her calf. She was an imported heifer.

Moisture Limit in Butter.

The Commissioner of Internal Revenue has issued a circular advising creamery managers that hereafter no excuse will be accepted for incorporating more than 16 per cent., the lawful limit of moisture in butter. The Commissioner goes on to say that the normal moisture content in butter made by the methods now employed ranges from 14 to 14½ per cent., and the margin between this and the 16 per cent. limit fixed by the regulations under authority of law is deemed amply sufficient to protect all butter manufacturers against variations above the normal content.

The Commissioner also states that manufacturers who seek to get as near the limit as possible will have to be sure to keep under the limit, otherwise they may expect prosecution, at which excuses will not avail.

A Seven-Year Record

WITH A SCORE OF

100 Per Cent.

Have you ever thought of the tremendous amount of work that a cream separator is asked to do? No other farm implement is used so constantly, and none subjected to more strain.

Do you know what it means—all that it means—when we say that a United States Cream Separator on the farm of Mr. Lewis Richards of Carroll, Neb., has run more than 5000 times, without missing a separation, and with no repairs?

Then, do you realize what it means to you—a dairyman—when we say, and are glad to prove to you, that this is by no means a great record for the U. S.? That U. S. Separators bought nearly 20 years ago, are doing duty today, as they did in their infancy?

The United States Separator is built to skim perfectly. It *does* skim perfectly. It is built to wear for a generation. It *does* wear for a generation. It is built to give the utmost satisfaction, at the lowest price at which complete satisfaction can be bought. That it does this, thousands of users are glad to tell.

Will you be one of the fast-growing number of dairymen who have separator perfection in their dairies? A post-card today will bring you the "honest truths." Ask for Catalogue No. 125.

Vermont Farm Machine Co. Bellows Falls, Vermont, U. S. A.

Value of a Famous Bull.

"No, it is not evidence of insanity nor that a man is merely a rich fool when he pays a long price for an admittedly good breeding animal in this age of progress. Some may have thought so when in 1906 Col. A. M. Bowman, a Virginia Jersey breeder, paid $10,000 for the bull Eminent, 2d, at the Cooper sale for that year. But listen to Col. Bowman. He writes to the Jersey Bulletin that since owning Eminent, 2d, he has sold sons and daughters from him amounting to a total of $57,000 and has twenty of his daughters still on hand. And Eminent is still busy. Of course, we can't all buy $10,000 bulls, but nine out of ten dairymen are losing money by not breeding to a better bull than the one that they have at the head of their herds."—Pacific Dairy Review.

DAIRY AND CREAMERY NOTES.

The United States Navy uses 612,000 pounds of butter in a year, and it is required to score 94 to 95 points, which indicates that the boys in the navy have pretty good butter to eat—better butter than a large number of creameries can make. This butter is not allowed to contain over 14 per cent. of moisture.

Guernsey cows, such are entitled to be listed in the Advanced Register, are averaging a fraction better than five per cent. butter-fat. The general average for the whole registration is 5.083 per cent.

In the official records of Holstein-Friesian cows just tested for admission to the Advanced Register we find 172 animals, of which one-half were heifers with first and second calves, giving 26 quarts of milk a day of an average of 3.54 per cent. fat, equal to 15.8 pounds of butter per week.

C. M. Winslow, of Brandon, Vermont, Secretary of the Ayrshire Breeders' Association and editor of the Herd Book, has issued a pamphlet entitled "The Ayrshire Cow." It is a gem of forty pages, containing the origin and history of the breed and records of individual cows. It is splendidly illustrated and interesting throughout. Dairymen should not rest a minute until they obtain a copy, which can be had by writing for it.

Do Your Cows Pay Their Board?

In a recent statement Tennessee Experiment Station says:

"Over 75 per cent. of the cows tested were not worth keeping."

Do you know which are your best cows? Have you *any* cows that are unprofitable?

An accurate test generally shows surprising results, and if you have not the means of testing the quality of milk, you cannot *know* which of your cows pay you a profit. One or two "boarders" will knock the profits from an entire herd.

Champion Milk Tester

THE $1.50 TESTER THAT DOES THE WORK

is the only *low priced* tester on the market that is simple, accurate, easily understood, cannot get out of order, and shows percentage of cream and butter fat at a glance.

Used and endorsed by leading farmers and dairymen.

Sent prepaid to any address upon receipt of price, **$1.50.** Sold on a positive guarantee to refund money if not satisfactory.

A Ten-thousand-dollar Calf.

It was announced recently that Daniel W. Field, of Brockton, Mass., had sold his seven-weeks-old Royal Purple bull calf, Aaggie Cornucopia Sir Colanthe, to W. H. Miner, of Chicago, the purchase price being $10,000, the highest amount ever paid for a young bull.

The bull's dam and sire are both world champions. The dam was Aaggie Cornucopia Pauline, owned by Mr. Field. Pauline is the world's champion senior four-year-old. The sire is Colantha Johanna Lad, also owned by Mr. Field. He paid $8,000 for the bull. Both sire and dam are products of previous world's champions.

Mr. Miner operates a farm of 7,000 acres at Chazy, N. Y. He is stocking his farm with the most valuable Holsteins money can buy.

Canada's New Milk Standard.

The government of Canada has defined new standards for dairy products, as follows:

Milk is defined as "the fresh, clean and unadulterated product obtained by the complete and uninterrupted milking, under proper sanitary conditions, of one or more healthy cows, properly fed and kept, excluding that obtained within two weeks before and one week after calving, and containing not less than 3.25 per cent. of milk-fat and 8.5 per cent. of milk solids other than fat."

Certified milk must contain 12 to 13 per cent. of milk solids, not more than 10,000 bacteria per cubic centimeter, from June to September, or 5,000 from October to May, and must be taken from cows semi-annually given the tuberculin test.

Cream must have not less than 18 per cent. of milk-fat, and must be free from any substance calculated to produce intensity.

The standard prescribed for butter is 82.5 per cent. of milk-fat, and not more than 16 per cent. of water. Cheese must have 45 per cent. of milk-fat, and its coloring must be harmless.

Holsteins Fill the Pail.

A correspondent of the Newark Evening News wrote a humorous article about Holsteins, of which the following is a specimen:

"If the Holstein is a big eater, she is a big producer also. Bread is never cast upon the waters in vain in her case. She pays it back lavishly with milk, in which, unfortunately, considerable of the waters have gotten mixed, rendering her milk thinner than that of any other cow. It is the only thin thing about the Holstein.

"Colonel Hayward, the genial banker and tennis champion of Branchville, owns a Holstein cow, which supplies the entire community with its household milk and supports a pen of calves besides.

"Another Holstein known as Jumbo, the property of Burson De-Bue, a prominent merchant of the town, is used as an auxiliary to the local fire department in place of a chemical. Jumbo responds to all still alarms. In proof of her efficiency it can be said that the hose company is hardly ever called out.

"Of the milk yield of Holsteins unbelievable stories are told. A buxom specimen belonging to a storekeeper at Andover is said to have filled a ten-gallon can daily for eleven months, when the owner, getting tired of waiting for her to dry up, sold her in order that he might have time to attend to his business.

"To milk a Holstein properly is a lifework. A summer boarder from Newark, descending from a train at Augusta one day last summer, saw an aged farmer milking a black and white cow, while his grandchildren, organized into a bucket brigade, carried the milk to a nearby spring house as fast as the pails were filled. When the summer boarder left on the train two weeks later the old farmer and his grandchildren were still at it."

Why Does the Fat Vary?

The relation of fat to milk is one of the unsolved problems of dairying. We do not know why, absolutely, but we know that a cow will vary from day to day. It is sometimes due to fright and unkind handling. If you take a cow that is ordinarily quiet and run a needle into her, or hit her with a club, or disturb her tranquility in some other way, the yield of milk will be very much less for that milking.

If she has what is called a nervous temperament, and is a very sensitive cow, there will be a very marked difference in the yield of milk, and fat will not be produced nearly so much.

In other words, the variation in the yield of milk is greater than the variation in the yield of fat. I remember the figures in one herd, in which one cow varied only four-tenths of one per cent. in a whole year, while another varied as much as three per cent. in her yield with no apparent cause.

Sometimes we ourselves do not feel so good as we do on other days. So of the cow. She may be a very sensitive cow, and the milker may be a little rougher on some days than on others and that may have some effect.

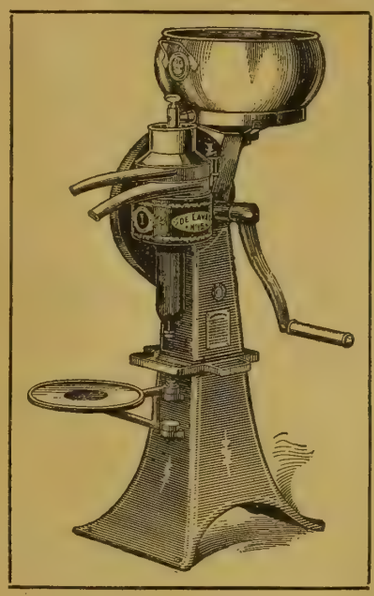
A multitude of influences are at work. The best dairyman is the one who understands the largest number of them. The tester under ordinary conditions is to be relied on for accuracy. The variation is not a variation of the tester, but a variation in the cow.—Prof. H. F. Van Norman.

98% of the World's Creameries Use

DE LAVAL CREAM SEPARATORS

Ten years ago there were a dozen different makes of creamery or factory separators in use. Today over 98 per cent. of the world's creameries use DE LAVAL separators exclusively.

It means a difference of several thousand dollars a year whether a DE LAVAL or some other make of separator is used in a creamery.



Exactly the same differences exist, on a smaller scale, in the use of farm separators. Owing to the fact, however, that most farm users do not keep as accurate records as the creameryman, they do not appreciate just what the difference between a good and a poor separator means to them in dollars and cents. Nine times out of ten the farmer can't tell whether or not he is wasting $50 to $100 a year in quantity and quality of product through the use of an inferior cream separator.

If you were in need of legal advice, you would go to a lawyer. If you were sick you would consult a doctor. If you had the toothache you would see a dentist. Why? Because these men are all specialists in their line, and you rely upon their judgment and skill. When it comes to buying a separator why not profit by the experience of the creameryman? His experience qualifies him to advise you correctly. He *knows* which separator will give you the best service and be the most economical for you to buy. That's why 98 per cent. of the world's creameries use the DE LAVAL exclusively.

There can be no better recommendation for the DE LAVAL cream separator than the fact that the men who make the separation of milk a *business* use the DE LAVAL to the practical exclusion of all other makes.

DE LAVAL WINS IN WISCONSIN.

At the Wisconsin Buttermakers' Convention held at La Crosse, January 21st to February 3d, 1911, the following were the high scores: I. W. Stryker, Nashotah, Wis., first, 96.50; G. P. Sauer, East Troy, Wis., second, 96.25; H. C. Raven, Clinton, Wis., third, 96.00. All are users of De Laval machines.

THE BROAD-TIRE LOW WAGONS.

The Electric Wheel Company, Quincy, Ill., has for many years been making a most excellent wagon of this kind. Many thousands are in use, but there are the strongest kind of reasons why the use should be universal. This Electric Handy Wagon is considered the typical wagon of its kind. It is not only a labor saver, but a wagon of wonderful

strength, and one that you will scarcely wear out in your lifetime. There can be no wheel troubles, no breakdowns.

If you want to get some up-to-date ideas along this line, some that will surely interest and profit you, take this matter up with the Electric Wheel Company. If you need a new set of wheels, that, too, is in their line. They will guarantee to fit your old running gears with their Electric Steel Wheels, and make practically a new Handy Wagon out of it. Write them before you settle down to your summer's work. If you purchase one of their Handy Wagons, or a set of their steel wheels for your old wagon, we know you will never have occasion to regret it. Address, Electric Wheel Company, Box 40, Quincy, Ill.

BEES PAY BIG

and require little care. All the little honey-gatherers and money-makers demand of you is to provide a home for them. They make the honey and you get the profit. What little work you must do can be made 100 per cent. easier and your profits 100 per cent. bigger if you have the

RIGHT KIND OF SUPPLIES

If you are a bee-keeper or are thinking of going into the bee business you ought to have our beautiful illustrated **New Bee Book**—just off the press. It's a complete guide to profitable bee culture. Tells you how to buy bees, what kind are best, where to locate the hives, how to care for them summer and winter, how to prepare the honey for market—in fact it tells you **all** you need to know to make bees highly profitable as a business or a side-line.

LOOK OUT FOR HOG CHOLERA.

The farmer or stock raiser who raises hogs for market is more or less on the anxious seat from the moment the litters are farrowed until the fat squealing porkers are safely loaded in a car and headed for the stock yards.

He asks himself, what assurance has he that an epidemic of cholera will not break out among his fattening herd when he least expects it and his pork profits go glimmering almost over night.

Until recently, the hog raiser was fully justified in asking himself that question, for he really had no such assurance. To-day, however, there seems to be assurance of the most positive sort that there is absolutely not the slightest danger of an epidemic of hog cholera, worms or other swine diseases if the proper precautions are taken. According to the testimony of many farmers and hog raisers who have tried it, the "proper precaution" lies in mixing a certain amount of Merry War Lye with the swill, or if the hogs are on a dry ration, with the drinking water, night and morning, each day. The unquestioned virtue of Merry War Lye as a hog remedy is due to an exclusive process of manufacture which renders it absolutely harmless to hogs when mixed with feed or water in the right proportions. It is the only lye which can safely be administered to hogs, and is specially prepared for preventing and curing cholera, worms and all hog diseases and adds wonderfully to their weight.

The daily use of Merry War Lye immunes and fattens hogs quicker and surer than anything else. It tones up the system, assists in the perfect assimilation of the food and prevents scouring. It saves feed, because every pound of corn or other ration fed goes into flesh and fat and none of it is wasted. And only the practical, experienced hog raiser knows the amount of feed that is wasted in a herd of wormy, scoury hogs.

In order to obtain the best results, Merry War Lye should be fed every day at regular feed time. Merry War Lye is most effective when mixed in the proportions of one tablespoonful with swill for ten hogs, or one-half can added to every barrel of drinking water or feed.

Every farmer and hog raiser owes it to himself to investigate the claims made for this remedy. It is certainly cheap enough; only ten cents a can or a case of twenty-four cans for $2.00, and at that price it is the cheapest pork profit insurance a man can buy.

Merry War Lye is for sale at nearly all dealers, but if it cannot be obtained at local stores, we earnestly advise everyone of our readers who raises hogs, either on a large or a small scale, to write to the manufacturers, the E. Myers Lye Company, Dept. 22, St. Louis, Mo., for full particulars, testimonials and information. Any dealer can secure Merry War Lye for you, however. See page 32.

The Sheep Industry and Legislation.

We are in sympathy with sheep raisers in their resistance to the removal of the duties upon wool and woolen goods. At this time wool is selling at comparatively low prices, and any further depression brought about by unnecessary legislation will result to the disadvantage of the entire country.

The alleged high price of wool and woolen goods and clothing is purely imaginary. The price of clothing, compared with current rates of pay for working people, is on a very moderate basis. The wool grower does not receive over $1.70 for the wool used in a suit of clothes, and the mill owner does not make half that much. The difference between $2.50 and the cost of a suit of clothes goes to railroads, commission firms, tailors, wholesalers and retailers. Taking off the duties now imposed will injure the sheep raiser, cut down revenues, reduce the operation of railroads, put mill operatives out of work and do damage from one end of the country to the other. Congress can do more damage in a day than it can remedy in twenty years. There is only one thing for sheep raisers to do and that is to get busy. Don't wait one minute. The voice of every friend of the sheep raiser should be heard in Washington. We understand that there is a movement to shake up Washington as it was never done before. Send telegrams to your representatives in Congress and to your Senators on April 10th, or as soon thereafter as possible. Letters are too slow. Legislators were not sent to Congress to represent the farmers of Australia, Argentine or Canada; don't hesitate to tell them so. Many of them need it. Many of them will be glad to know what you think about it.

Southern Cattle at St. Louis.

On page 21 will be found the advertisement of Clay, Robinson & Co., containing a very good illustration of a drove of Mississippi cattle sold by said firm on March 6th at the highest price paid on that market for Mississippi cattle. The particulars of the sale are given on page 21, therefore it is unnecessary to mention them again. We wish to remark, however, that this transaction was alike creditable to the raiser, feeder, salesman and the market, indicating that strictly good cattle are not limited to any state or section, and that quality in beef cattle will find a ready sale at remunerative prices.

Several years ago it was the privilege of the editor of The National Farmer and Stock Grower to address the Southern Live Stock Association at Agricultural College, Miss., upon the subject of "Live Stock Markets and Their Future." It was at a time when there were some doubts as to the stability and competitive features of the live stock markets. We then stated that if the stock raisers of the South would do their part they need not fear the result in market. We stated of our own knowledge that the markets for live stock had elements of stability which could not be done away with, and since then every word of the address has been supported by the sales that have been and are being made when good cattle arrive in market.

A WONDERFUL STORY ABOUT HORSES.

A simple little story about horses has done more to ameliorate the condition of the horse than any other factor. The effect of "The Story of Kate and Queen," by Prof. Jesse Beery, has been felt in every section of this country. This interesting story, charmingly told by the prolific pen of the greatest horseman the world has ever known, cannot help but be of interest to every reader of this paper.

The name of Prof. Beery is known and honored throughout the country for his wonderful feats of horsemanship. His fame as a horseman is equaled by his reputation as an author. In "The Story of Kate and Queen" Prof. Beery has put the results of his life-long work among horses. While the book was written to entertain, it is full of interesting bits of useful information that can be put into successful practice by anyone.

"The Story of Kate and Queen" has been offered absolutely free by its author, and will be sent to any of our readers upon receipt of two two-cent stamps.

Write to Prof. Jesse Beery, Box 446. Pleasant Hill, Ohio.

St. Louis Hog Prices.

On April 1st, at the St. Louis market, the top price for hogs was $6.95 per 100 pounds for a load weighing 195 pounds. The bulk of the hogs sold at $6.50 to $6.80 per 100 pounds.

R. T. Vaughan, Va. "Am pleased with the spreader."

Construction on the Farm.

Construction of buildings is made easy, simple and economical on the farm. There are manufacturers who have successfully overcome all difficulties. The first difficulty the farmer has to contend with is to draw suitable plans. This is done for him. Original plans cost much money, but the manufacturer has had many plans drawn and the farmer can buy the working plans complete for very little money. The farmer can buy plans of almost any house or outbuildings that he can imagine. He can construct the buildings at home, or he can buy the buildings ready-made. He can buy the lumber at home and buy the millwork at the factory. Foremost in doing all this work for the farmer is Gordon-Van Tine Co., 2482 Case street, Davenport, Iowa, and it will pay any farmer to send 10 cents to pay postage on their Home Builder's Plan Book.

Home-grown horseradish is selling loose from farmers' wagons at $6.25 to $6.75 per 100 pounds.

THREE-YEAR SUBSCRIPTIONS.

Orders For The National Farmer and Stock Grower Solicited.

Kindly sign the Blank Form Below and Become a Regular Subscriber.

We desire to invite attention to our three-year subscription proposition. We hope to obtain one hundred thousand additional subscriptions during the present year to continue for three years. It is practically a trial subscription and payable at the end of the first year. The subscription can be stopped at any time by paying for the period the paper is taken. This method of taking subscriptions is the invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper slips in a list of handy premiums for the subscriber to select one from, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

The Wheat Market Situation.

The shadow of the proposed admission of wheat free of duty from Canada is upon the wheat market. People fear to be caught with wheat on their hands.

At the time when the government issued the estimate of grain remaining in farmers' hands the statistical position was not unfavorable to those who have wheat for sale.

The United States Department of Agriculture reported that on March 1st about 179,690,000 bushels of wheat remained in farmers' hands, against 173,344,000 bushels on hand a year ago and against 154,031,000 bushels of wheat, the average amount on hand March 1 during ten years just passed.

There is little in the situation, except the fear of pending legislation, to account for the reduction of 28¾ cents a bushel from the price at which May wheat was selling for exactly one year ago.

The crop of wheat in farmers' hands March 1st is worth to the farmers who have it on hand forty-six million dollars less than it would have sold for on the selling basis of one year ago.

Notwithstanding the immense reduction in the price of wheat, it is safe to assert that not one single loaf of bread will be sold to a consumer for a cent less than it was selling for a year ago.

The responsibility for this discouraging state of affairs rests upon those who brought it about, and the full consequences are not yet apparent. When the government starts in to reduce the price of the wheat crop by law, the government will hasten the time when farmers of this country will abandon wheat growing to the Canadians and to Argentine and money will have to be sent abroad to get food to feed the people. It will not be easy to get back the money that goes out for food.

On March 1st of last year, at Chicago, wheat for May delivery was contracted at $1.47⅞ per bushel, a very moderate price, being less than two cents a pound. This year, on March 1st, the wheat for May delivery was quoted at the low and unprofitable price to the grower of 86⅛ cents a bushel, and at such a price bread in cities ought to reach the people at 2½ cents or less per pound. The May quotation is the most important of the year. The wheat crop of 1910 was 691,000,000 bushels and only 57,000,000 bushels less than the largest crop ever raised.

An Indiana Farm Calf.

The following is from our friend and patron Mr. E. S. Rigdon, of Wheeling, Ind., who says: "In the January issue I note the history of the grand champion steer Shamrock, II. I just wish to say we can grow calves down in 'Old Indiana,' and to substantiate my claim will send you the weights of Rose Budd, a grade bull calf, owned, raised and fed by the undersigned. These weights cover the time from weaning the calf until the 13th of this month. The calf is about three-fourths Shorthorn and one-fourth Polled-Angus. Rose Budd was calved March 13th, 1910."

Date.	Age, Days.	Weight, Pounds.
August 13, 1910.....	148	540
September 13, 1910...	179	548
October 13, 1910.....	210	660
November 13, 1910...	241	770
December 13, 1910....	271	890
January 13, 1911.....	302	980
February 13, 1911.....	333	1,070
March 13, 1911.....	364	1,140

Note—It will be remembered that Shamrock, II., weighed 1,120 pounds at the age of 315 days.—Ed.

Available Nitrogen

is *the* thing in practical fertilizing.

Nitrate of Soda

is the cheapest and most available form of Nitrogen for all crops.

"The Cost of Available Nitrate," Sent Free

It is worth dollars to you. In this book Prof. Voorhees shows how the American farmer could have saved $17,000,000 on the cost of nitrogen in 1909. Address

Luther Grinder Co., 848 Newton St., Milwaukee, Wis.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Nitrate of Soda Makes Great Strides.

A few years ago the Nitrate Propaganda began a campaign of educative advertising for a greater and wider use of Nitrate as a fertilizer.

The farmers' publications were very much opposed to having anything relating to the use of Nitrate appear in their columns except as paid advertising. Now hardly an issue of any farm paper appears without reference to the use and results of using Nitrate.

Dealers advertise that they have Nitrate for sale, correspondents write of the wonderful results gained by the use of Nitrate, editors recommend its use and reading notices are constantly appearing.

The publications of the Propaganda are now called for in millions, and the imports of Nitrate have trebled.

These changes are simply due to the fact that the American farmer is quick and sure to catch onto a good thing when once it has been pointed out to him.

No better way to point out the value of Nitrate as a fertilizer consisting of available food for plants could have been devised than that followed by the Nitrate Propaganda.

The results were compiled and published in book form. These were sent free upon request, as widely advertised. Not a sack of Nitrate was offered for sale—but these results of the profitable use of Nitrate were given away.

There was the ring of truth about these books and farmers and gardeners after reading them wanted to experiment for themselves.

The Propaganda collected results and added them to what was done by its own men and by Experiment Station Chiefs.

The value of the books was increased and to-day they form a necessary part of thousands of agricultural libraries from Maine to California and from Alaska to Florida.

The results they contain show that by proper cultivation and fertilization the yield of fruits, vegetables, grains, grasses and other crops are often doubled, many times trebled.

Returns like these will not stay in the background, and as a result thousands of farmers this year will use a top dressing of 100 to 200 pounds of Nitrate of Soda to the acre, and a far greater number than ever before will make sure that their fertilizer contains enough Nitrate to make a well-balanced plant ration—for without it there cannot be the highest possible development and fruition of the plant.

UTILIZATION OF FARM WASTES

Inaugurate a Rotation System, as Crop Repetition Takes Sustenance From Land—Fencing Means Profit.

Utilization of the wastes of the farm is a concrete proposition that the farmer is being confronted with in these days of conservation.

The sacrifices of farm material are most notable, eating into the aggregate profits. In numberless instances there are enough wastes to bring a handsome return on the investment if they were stopped.

Fencing the Leaks.

A great loss is caused by not having the farm properly fenced, so as to be able to raise all the pasture that is possible. Pasture land would be worth many times more if converted into beef, mutton, milk or horseflesh. Many farmers are compelled to begin feeding dry feed early in the fall, when there is a large amount of much better feed going to waste, all for the want of fencing.

The feeding of poor and scrubby stock, resulting from a big proportion of cross-breeding, is a waste. Feed good stock. The same amount of labor and feed is required for the raising of inferior animals as is needed to market the worthy and money-making kind.

Grow More Forage Crops.

Grow more forage crops, which assist in restoring or maintaining the fertility of the soil. With forage crops the money-making stock question is easily solved. Stock, with forage crops, revive the land, furnishing the all-necessary humus, whose presence means success and whose absence spells disaster.

Guard the manure—grand old source of land wealth. Manures approximating 25 per cent. of the value of the feed should not be allowed to deteriorate. The liquids should be saved, and these, together with the solids, should be evenly spread upon the fields.

Also, there is the waste arising from neglect properly to house the farm tools and machinery. Millions of dollars' worth of these implements annually are permitted to remain in the open or under a tree, where they rust and rot.

Waste of time and waste of opportunity are involved in other directions, such as repairing the fences, cleansing the gulleys of trash, swinging the gate that is down, and otherwise watching the corners.

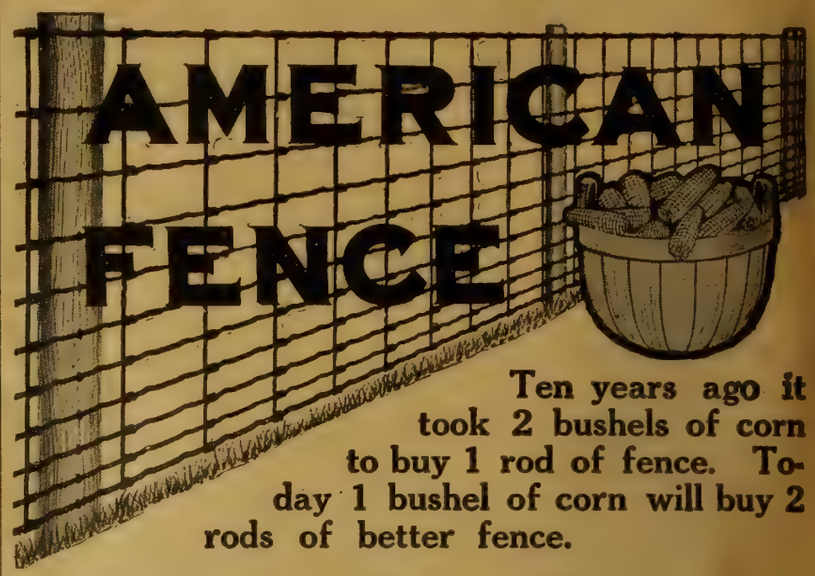
Instances of Profit.

But the greatest waste is in the failure to inagurate a system of crop rotation. If memory serves you well, recall the original fertility of the soil, and compare it with its present productive powers. Crop repetition year after year may have taken the very soul from the land.

Selling a 500-acre farm for $60,000 was an easy matter for a Nebraska farmer recently, because the richness of the soil created the land value. The richness was obtained through a liberal stock-raising policy. One hundred and twenty-five head of thoroughbred cattle were kept on the place constantly, and the manure that was produced was of sufficient quantity to require the daily attention of one man and a team. The corn yield on this property was eighty bushels per acre.

Here is another instance: An Illinois farmer cropped his land until its corn average was reduced to twenty-five bushels, and finally he sold the farm at the low price of $35 per acre. The purchaser realized the suicidal policy of the former owner, and promptly set to work to stock the place and rotate the crops. The same land to-day is worth $150 per acre, produces eighty bushels of corn to the acre and supports eighty cows. The wastes were stopped and financial benefit resulted.—From the Royal Fence News.

Higher Cost of Living Does not Include Fence



Ten years ago it took 2 bushels of corn to buy 1 rod of fence. To-day 1 bushel of corn will buy 2 rods of better fence.

Price Low—Quality Better Than Ever

Within ten years farm products have greatly advanced in market value while the price of woven wire fence has been reduced. These are the reasons: Newer and improved methods of digging the ore, shipping to the furnaces, melting into steel and making into finished products are in force. Ten years ago operations were on a small scale. Today the plan of operation is vast. The manufacturer is able to deliver the finished goods quickly, of better quality and at a lower price.

American fence is made better than ever. It is a thoroughly galvanized square mesh fence of weight, strength and durability. Large wires are used and the whole fabric is woven together with the American hinged joint (patented)—the most substantial and flexible union possible. Both wires are positively locked and firmly held against side slip and yet are free to act like a hinge in yielding to pressure, returning quickly to place without bending or injuring the metal.

Dealers Everywhere Stocks of American Fence are carried in every place where farm supplies are sold. The Fence is shipped to these points in carload lots, thereby securing the cheapest transportation, and the saving in freight thus made enables it to be sold at the lowest prices. Look for the American Fence dealer and get the substantial advantages he is enabled to offer. He is there to serve the purchaser in person, offer the variety of selection and save the buyer money in many ways.

Preservation of Barn-yard Manure.

The entrance of science into the domain of agriculture compelled the revision of the ideas as to the methods most profitable in the care of barn-yard manure. Science has shown how great is the loss when manure is exposed to the wind, the sun and the rain. But more important than this is the change of views as to the value of rotted manure as compared with fresh manure. It used to be thought that good crops could be grown only with the assistance of manure that had been rotted for from three to six months. The common agriculturist believed that a small pile of well-rotted manure contained in it all the fertilizing elements of the original pile of manure from which it came.

When the Experiment Stations were established, one of the first problems worked on by them was the manure problem. They began to analyze manure in all kinds of conditions and handled by many methods. One very important truth was quickly brought to light relative to well-rotted manure, and that was that such manure had lost a large part of its fertilizing value, and that it was worth much less to the farmer than fresh manure, except where quick growth of vegetation was desired.

We no longer read in newspapers and books the advice to use well-rotted manure. Manure that is exposed for three months will lose about one-third of its nitrogen. This is a great item, for nitrogen is one of the fertilizers of great importance to crops and one that has much to do with the size of vegetation. With many crops success depends on the abundance of nitrogen, and there are many soils also deficient in nitrogen. So we cannot allow the nitrogen to slip away.

The above figures are for manure exposed to the elements. By protecting manure the loss of nitrogen can be reduced about one-third. A pile of manure protected for three months will lose about 20 per cent. of its nitrogen instead of over 30 per cent. This shows that some loss will occur anyway, when the manure is out of the ground, and that it should be gotten into the soil as soon as possible after it is made.

But so far as the potash and phosphate are concerned, the protection counts for more. Ordinary manure left exposed for three months will lose about 30 per cent. of its potash and about 15 per cent. of its phosphoric acid. If the manure is protected there is very little loss of potash and phosphoric acid. So manure should be protected for this reason if for no other.

The use of gypsum in manure is not of much consequence if applied to the pile. It is of value, however, if used in the stables to catch and hold the liquid manure. It has hitherto been thought by many that the application of gypsum to the manure pile was of considerable value.

Exposed manure also loses much of its organic matter. This loss is a loss to the manure, even though the organic matter is composed largely of the carbon compounds. Carbon is now known to be used to a large extent by all bacteria, and thus carbon is an indirect fertilizer, where the soil bacteria are required to elaborate plant-food elements. When the organic matter has been plowed under its breaking up helps the soil organisms that help the crops.

The Senate and Cold Storage.

The United States Senate Committee on Manufactures of the last Congress before adjourning recommended that articles should be considered adulterated if kept in cold storage longer than the time stated.

Beef, seven months; veal, four months; pork, four months; sheep, four months; lamb, three months; poultry, three months; game, three months; fish, three months; eggs, three months; butter, three months.

Much of the report is devoted to cold-storage eggs. It states that the average quantity of such eggs in New York City each year is about 700,000 cases and in Chicago about 1,000,000 cases.

No eggs should be placed in cold storage, the report says, that are produced during the hot months. Such eggs are of an inferior quality.

Testimony showed, according to the report, that eggs produced during the summer would not keep in condition fit for use, even under the most favorable conditions, more than three months, and that often in less than a month they would be unfit for food.

Prize Oat Contest.

Through the Iowa Corn Growers' Association, the International Harvester Company of America has offered the farmers of Iowa the largest amount of premiums ever given for the best sample of oats.

The premiums amount to $4,000, and include several of the most improved farm machines, from a disk harrow to a large shredder, and also a scholarship in the Iowa State College of Agriculture at Ames. The award of prizes will take place during the Ninth Annual Exposition and Contest of the Iowa Corn Growers' Association, to be held next winter.

The policy of the association is to divide the state into classes, thus making it possible for every farmer in Iowa, regardless of the variety of oats he is growing, to enter the contest. Also plans are made whereby each section of the state can compete within itself.

These premiums represent another step in the policy of the International Company, through its I. H. C. Bureau, to encourage and assist the farmers of America in the raising of larger and better crops.

In addition to the $4,000 for oats, the Corn Growers' Association offers several thousand dollars in premiums for the best corn raised in the state. Last year these corn prizes amounted to more than $20,000.

GENERAL FARM NOTES.

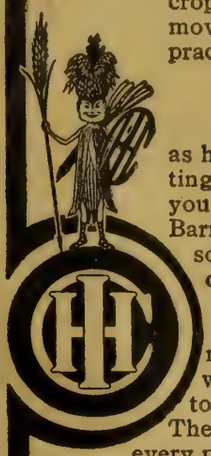
Issac F. Tillinghast, of Scranton, Pa., a veteran seedsman, has an advertisement in this edition, offering cabbage seed of his own breeding and a remedy for green worms in cabbage growing.

The state of Massachusetts has 36,512 farms, averaging 79 acres per farm, against 37,715 farms of 83 acres average ten years ago. This is a decrease of 3 per cent. in number of farms. In Massachusetts 31,758 farms are conducted by owners, 2,935 by tenants, and 1,819 by managers. Over 10,000 farms are 19 acres or under.

The Best Way To Conserve The Natural Resources Of Your Farm

YOUR land is your biggest asset. On its power to grow good crops depends your very livelihood. What are you doing to insure its continued fertility—your future prosperity?

There is a great national movement on foot now for "The Conservation of Our Natural Resources." Don't think this applies only to our forests and coal mines. The soil, too, has been drained of its natural wealth by season after season of bumper crops. For your own good, join the soil conservation movement now. Begin on your own farm. There is a practical, economical, profitable way. Invest in an



I H C Manure Spreader

as hundreds of other farmers have done. By distributing your manure with one of these efficient machines you can keep your land always in top-notch condition. Barnyard manure is rich in the elements that enrich the soil, and an I H C Manure Spreader enables you to distribute it in the way to use all of it to the best advantage. I H C Spreaders are so designed that the manure can be spread in just the right amount required by the condition of the soil—a heavy coat where it is most needed—a light top dressing where that is best. They are simple and strong in every part. Their dependability has been proved by years of service.

I H C Spreaders are made in three styles:

Kemp 20th Century
Corn King **Cloverleaf**

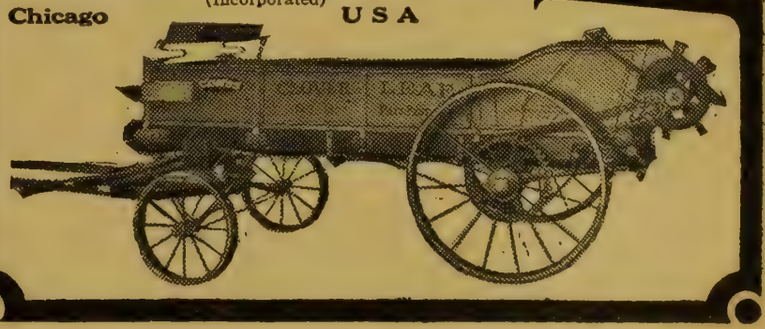
in sizes suitable for any size farm.

Call on the I H C local dealer and see the one best adapted to your needs. Ask him about the bigger profits I H C Spreaders are bringing to users. If you prefer, write direct for I H C Spreader catalogue and full information.

I H C Service Bureau

The purpose of this Bureau is to furnish farmers with information on better farming. If you have any worthy question concerning soils, crops, pests, fertilizer, etc., write to the I H C Service Bureau, and learn what our experts and others have found out concerning those subjects.

International Harvester Company of America
(Incorporated)
Chicago **U S A**



Acording to the Census Bureau there are 177,299 farms in Kansas averaging 244 acres per farm. Ten years ago there were 173,098 farms averaging 241 acres. The ten-year increase in number of farms is 2 per cent. Kansas has 110,742 farms conducted by owners, 65,231 conducted by tenants, and 1,326 conducted by managers.

The United States Census reports 30,741 farms averaging 171 acres in Idaho in the year 1910, against 17,471 farms averaging 183 acres enumerated during the year 1900. This is an increase of 76 per cent. in number of farms.

WESTERN

RANGE HORSE SALES.

Horse raisers are advised that sales will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,

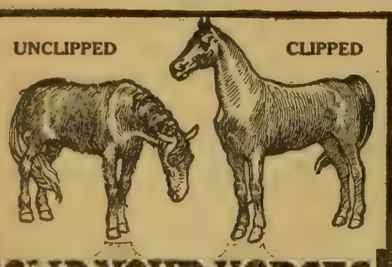
As usual, during the season of 1911. The First Sale will probably be held

THURSDAY, JUNE 15,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.



CLIP YOUR HORSES IN THE SPRING

Clipped horses have the best of it in every way. They not only look better, but they are fresh and full of life and vigor. Their feed does them more good, they rest better and do better work. They are not subject to coughs, colds, pneumonia, etc., which ruin many good horses. Clip before you put the horses at the spring work. You can clip a horse in 30 minutes with this

Stewart Ball Bearing Clipping Machine

It turns easiest, clips fastest and lasts longest of all clipping machines.
Anyone can operate it and do good work.
It has the famous Stewart one-nut tension knife—highest grade.
Price of machine, all complete, as shown, is only **$7.50**
Get one from your dealer or send $2.00 and we will ship C. O. D. for balance. Send today or write for our new 1911 catalogue.

Missouri Mules in Africa.

On February 6th, at Cape Town, South Africa, the South African News reported the arrival of 124 mules by the steamer Welsh Prince, that had been sold and shipped by the Joseph A. Maxwell Mule Company, of the St. Louis National Stock Yards. The item is as follows:

"By the S. S. Welsh Prince, which arrived at Cape Town during last week, there came a shipment of North American mules, which by those competent to know are adjudged to be the finest mules yet landed in South Africa. They were purchased by a well-known local farmer, who toured the state of Missouri to get them on behalf of Brice Brothers, of Springs, who hold the contracts for the supply of mules to the Johannesburg Corporation. The shipment consists of 124 mules, all of which are between four and seven years of age, and stand fifteen hands in height, this being the stipulation made by the Corporation, who further stipulated that they must all be bred in the state of Missouri, which is the finest mule-breeding country in the world."

"A representative of the South African News was given an opportunity of seeing the shipment, and he can bear out the opinion held by others who have seen them, that they are a magnificent lot, and have stood the trip from their American home well. Several days were taken up in their trip in railway trucks across the American Continent, and then thirty days at sea, and now they have another three-days' journey before them to Johannesburg. The passage across was not as nice as could be desired, the vessel experiencing heavy weather and for a period of eighteen days the mules were standing almost knee deep in water. On one occasion a heavy sea was shipped and a portion of the mule boxes washed away. The Captain of the vessel (Captain Sheppard) slowed the vessel down for three hours, and the whole crew set to, with a will, and, using some spare timber, erected other boxes.

"If we could breed mules like those in this country," said a well-known judge of horseflesh, "our fortunes would be made."

The shipment referred to is one of three which have been sold to South African contractors by the Jos. A. Maxwell Mule Company, of the National Stock Yards, each shipment arriving safely in first-class condition.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presence adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

The Record of Marion Patch.

Two world's records were broken at the Lake of the Isles Race Course on January 28, 1911. Bay Seth, owned and driven by E. C. Best, of Minneapolis, lowered the world's half-mile trotting record on the ice from 1:03½ to 1:01.

Marion Patch, driven by Harold Savage, age sixteen, lowered the world's half-mile unhobbled pacing record from 1:02½ to 1:02.

These records were made in two special races for the purpose of lowering the existing marks. The weather was favorable, a light breeze blowing down the course. The track was not in the best possible condition, but rather slow near the finish, owing to the fact that the Park Board had recently hauled heavy loads of dirt over it. These marks will go as straight-away records and are remarkable, owing to the fact that the course is slightly curved.

Each of these performances is considered phenomenal. Bay Seth clipped two and one-half seconds off the record with such ease that he is generally considered the best trotter that has ever appeared in that vicinity, by all means the best one ever worked on the ice. He is a bay gelding compactly built, an ideal type of the American trotter. He is eight years old, and two years ago made a dirt record of 2:11¼.

The record of Marion Patch is remarkable in that this mare is but five years old and had a tire dirt record of 2:24¼. She is a daughter of Dan Patch, and resembles him in many respects. She was trained and driven in this trial by Harold Savage, the sixteen-year-old son of M. W. Savage, who has not had as much experience as is usually the case of drivers in events of this kind. All things considered, together with the fact that this is her first season on the ice, the feat of this young mare and her young trainer and driver is unparalleled in the history of harness racing.

Her time by quarters was: Quarter, 30¾; half, 1:02. Bay Seth did the first quarter in 30¼.

The Monday and Tuesday Auctions.

During the last week in March, Holland, Nugent & Maxwell Bros. sold over a thousand horses in their two-day sale. They report that all good, useful horses from 1,050 to 1,200 pounds, of the driving type, are selling all right. This is the greatest auction sale of horses on the continent, and horse dealers should get on their list for weekly advice to shippers. Address, Holland, Nugent & Maxwell Bros., National Stock Yards, Ill.

How About Your Straw Pile?

The threshing of small grain is a process which is very important to the farmer and the thresherman. The question "Is there grain in your straw pile?" is a very pertinent one asked Nichols & Shepard Co., of Battle Creek, Mich. They are builders of threshing machinery and have a card addressed to you on page 9 of this paper.

DAIRY AND CREAMERY NOTES.

The Milk Reporter, issued at Sussex, N.J., says: "The milk standard of all the states in the Union, outside of New York, is 12 per cent. of solids, and not less than 3 per cent. of butter-fat. This is also the text-book standard."

In their attempt to secure pure milk for the inhabitants of London, the metropolitan borough councils have, in twelve months, removed no fewer than 1,290 names from the register of milk vendors. The milk vendors were putting something in the milk to stretch it.

The record of Missouri Chief Josephine, the Missouri Agricultural College cow, was 26,861.5 pounds of milk in one year, 2.76 per cent. fat, butter-fat content 740.4 pounds, equal to 868.7 pounds of commercial butter, an average butter production of 16½ pounds per week. Her milk production averaged about 8¾ gallons a day for the entire year.

The total entries in the Wisconsin Dairy Cow Competition have reached 506 cows. Of this number 211 are Holstein cows, 193 Guernseys and 102 Jerseys. All but 58 of the total number are pure-bred cows.

The average one-year production of 117 cows in Wisconsin dairy competition of 1910 was 10,294 pounds of milk and 1,245 pounds milk solids, of which 437.8 pounds were butter-fat. This amount of fat would make about 510 pounds of ordinary butter per cow.

get all the dope

If you're only thinking about a cream separator don't fail to do a thorough job so that when you buy you'll buy right. Look up the merits and faults of all the various kinds; ask everybody you see using a separator how he feels about it; get all the catalogs, and don't overlook the Economy Chief Dairy Guide for 1911. It's worth a lot of money to dairy farmers in every state. Ask for a free copy today.

Don't Have a Blind One

"VISIO"

Wonderful Discovery

DISEASES of the EYE successfully treated with this NEW REMEDY.

AN ABSOLUTE CURE for Moon Blindness, (Ophthalmia), Conjunctivitis and Cataract, Shying horses all suffer from diseased eyes. A trial will convince any horse owner that this remedy absolutely cures defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO," use it under our GUARANTEE; your money refunded if under directions it does not effect a cure. "YOU PAY FOR RESULTS ONLY." $2.00 per bottle, postpaid on receipt of price. Visio Remedy Ass'n., Dept. C, 1933 Wabash Ave., Chicago, Ill.

MILK FEVER OUTFITS, Dehorners, Teat Syphons, Slitters, Dilators, Etc. Received Only Award World's Fairs, Chicago, St. Louis. Write for Illustrated Catalogue. HAUSSMANN & DUNN CO., 392 So. Clark St., Chicago.

Fistula and Poll Evil

Fully ten thousand horses are cured every year with Fleming's Fistula and Poll Evil Cure and many of them are bad old cases that skilled doctors have abandoned. Easy and simple; no experience needed; no cutting to be done; just a little attention every fifth day—and your money refunded if it ever fails. Cures most cases within thirty days, leaving the horse sound and smooth. Valuable information and full particulars given in Fleming's Vest-Pocket Veterinary Adviser. Best veterinary book for farmers; 192 pages, 69 illustrations. Copy mailed free. FLEMING BROS., Chemists, 28 Union Stock Yards, Chicago, Ill.

From Bloomington, Ill., on March 22d., it was reported that T. A. Donald, of Logan county, Illinois, had made a contract to deliver 500 horses for the Cavalry Service of the United States Army.

Belgian Horse Breeding.

Consul H. J. Dunlap, of Cologne, Germany, reports to the Department of Commerce and Labor as follows:

"The whole world appears to be dependent for heavy horses for breeding upon Belgium, where the business is exceedingly profitable," states a recent report on the Belgian equine market, which further says that 19,561 horses and colts were exported in 1909 to Germany, 3,524 to Luxemburg, 2,412 to France, 1,910 to Holland, 1,370 to the United States, 1,219 to Switzerland, 672 to England, and 338 to other countries. From Germany many of these animals were sold to Austria, Russia, Denmark and Sweden for breeding purposes, and it is very probable that many of those sold to French and English breeders found their way to the United States and Canada.

"In order to recoup itself for this outflow, Belgium is obliged to purchase elsewhere horses of a lighter weight for domestic use. During 1909 there were 20,211 horses and 3,085 colts imported for working purposes, and 22,653 for slaughtering. Owing to the large export, work horses of the better class can not be used, because of high prices. The supply of these lighter horses comes partly from England, but larger numbers are brought from Russia, strange to say, coming through Holland. A few heavy animals are also imported from Holland and France, which are also disposed of as Belgians."

Special Sale of Horses.

A special sale of high-class saddle and harness horses will be held April 17, 18, 19, 20 and 21, at the St. Louis National Stock Yards. This will be a joint sale by all the commission interests at the yards, and there will be a magnificent array of horses to be sold at auction. The offerings will include coach horses, well-broken driving horses, roadsters, and some of them with speed, and all classes of saddle horses. Great preparations have been made for this sale. The offerings will be worthy of the most critical buyers. Entries are closed and catalogues can be had of Holland, Nugent & Maxwell Bros., or of Campbell & Reid and Western Sale Stables Co., National Stock Yards, Ill. It is estimated that about 250 splendid horses will be sold without reserve to the highest bidder.

The Price For a Draft Horse.

On the Monday and Tuesday auction at the St. Louis National Stock Yards, March 27th and 28th, Messrs. Holland, Nugent & Maxwell Bros. sold over a thousand horses at good prices. In the Tuesday sale one magnificent dapple gray gelding attracted great attention and admiration. He was five years old, seventeen hands high, weighed 2,180 pounds, was in perfect condition, as smooth and compact as a pony. He was consigned to market by Nugent & Robertson from Pawnee City, Neb., and after active, competitive bidding was sold by T. H. Holland, auctioneer, for $500 to Wheeler & McIlvain, of Boston, Mass. This is the record price of the market for a draft horse at auction, and it is doubtful if a better horse in the draft class was ever seen on the market.

Western Range Horses.

We are again authorized to announce that Campbell & Reid and Western Sale Stables Company will hold their sales of range horses and mules as usual during the season of 1911. The first sale will probably be held in the middle of June, depending upon condition of the offerings. Ranchmen who will have stock for sale will find it to their advantage to consign to these sales, because they are the best-conducted and the farmers and dealers look to them for supplies. Usually from 1,200 to 2,000 horses and mules are offered and sold with ample competition for all the offerings. St. Louis is the best market for range horses, and the only market that can realize their full value. For further particulars address J. J. Searcy, Manager, National Stock Yards, Ill.

HORSE AND MULE ITEMS.

Attention is again invited to the card of Walker Bros., of Oklahoma City, Okla. This is a firm dealing in draft and coach stallions and handling a fine class of pure-bred horses that will cause great improvement in the horse stock of the Southwest. Their manner of doing business is strictly in accordance with business principles. The card is on page 20.

The shipment of eighteen head of 1,750-pound Percheron horses from the Chicago market to Portland, Oregon, in the month of March, was an important incident. These horses were all geldings and were bought by William Thompson to sell again. The original cost was $280 to $325, with an average above $300.

At a sale held March 8th by Peter Hopley & Son at Lewis, Iowa, seven Percheron stallions averaged $732, and forty Percheron and Shire mares averaged $515. The top price for a stallion was $925, paid by T. E. Husted, of St. Charles, Iowa, for the black-grey Grenot, foaled March, 1906. The top-price mare was the International grand champion Percheron Amorita, foaled June, 1905, bought by Walter Roberts, of Atlantic, Iowa, for $1,400. There were no Shire stallions, and the top-price Shire mare was a bay, bought by Charles Summers, of Malvern, Iowa, for $965.

At the sale of Percheron horses held by H. G. McMillan & Sons at Sioux City, Iowa, thirty-four stallions sold for an average of $436.30, and forty-six mares averaging $619.25. The gray stallion Emperor, a yearling, by Calypso, sold to John Bierns, of Missoula, Mont., for $1,405. Three mares sold above $1,000, the top price being $3,500, paid by W. S. Corsa, of Whitehall, Ill., for the black mare Iolanthe. She had thirty-six first prizes and championships to her credit and was bred and raised by McMillan & Son, and the price is the record for an American-bred Percheron mare.

Our readers will remember that King Edward of England and Baron Rothschild sent over some magnificent Shire horses to this country several years ago, therefore will not be surprised to learn that King George, V., won his first blue ribbon at the recent Annual Exhibition of the Shire Horse Society in London. His horse, Hoe Forest King, led the class for stallions under 16.2 hands. The horse is a son of Lockinge Forest King, the greatest living sire of the Shire breed.

Hugo Heyman, proprietor of the Greater New York Mule Yard at No. 483 Flatbush avenue, Brooklyn, N. Y., is selling Missouri mules. Mr. Heyman is having a prosperous season in this branch of the trade, the rapidly-growing demand for mules in New York and vicinity having almost doubled his business thus far this year. Most of the mules sold by Mr. Heyman are selected by Gillen & Heiman at the St. Louis National Stock Yards.

During the month of March, Messrs. Trumans' Pioneer Stud Farm of Bushnell, Ill., sold to Mr. J. A. Hart, of Kirklin, Ind., the imported dapple-grey Shire stallion Farmer Grey (26,213). It will be remembered that this great colt was first and reserve champion at the Illinois State Fair and first and reserve champion at the International Show in 1910. It is very questionable if there is a Shire colt of his age to-day his equal in this country. When conformation, action, good, large feet, beautiful pasterns and hard, flinty bone, with silky hair, are taken into consideration, as a model draft horse he stands absolutely in a class to himself.

A world's record price for a baby jack, less than four months old, was set in Sedalia, Mo., on March 24th, when S. P. Huff, of Lamonte, Mo., made a sale to L. M. Monsees, of the Limestone Valley Stock Farm, near Smithton, for $500.

Officers of the United States Army who will attend the International Horse Show to be held at Olympia, near London, in June, will ride horses that cost $1,500 to $2,000 each. These horses were bought near Warrenton, Virginia, and the animals selected were the best in a country that is renowned for the production of hunting stock. It is hoped that the United States Army will make a good showing at Olympia.

HORSE AND MULE SALESMEN.

HOLLAND, NUGENT & MAXWELL BROTHERS,

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Contest of Dressed Fowls.

At the Boston Poultry Show, in January, the judging of utility poultry was a feature. Nine dressed fowls were judged by market men and by students and the decision was unanimous.

The fowls in the contest were Wyandottes, Plymouth Rocks and Orpingtons, and they were placed as mentioned.

The reasons given for placing the Wyandottes first were that they were lower set and had fuller breasts than the other birds. Each Wyandotte had a straight breast bone well covered with meat, whereas two birds in each of the other classes had crooked breast bones and lacked the meat covering of the Wyandottes. The Wyandottes were in better condition, better quality and showed quicker maturity than the other classes. They also had stronger heads, brighter eyes, fuller faces and shorter backs, denoting the strongest constitution. The Rocks excelled the Orpingtons in breast development, filling and covering—the Orpingtons being almost bare. The Rocks also had stronger heads, brighter eyes, finer quality and better condition.

Feed That Makes Poultry Profitable.

Poultry products are not so high in price as they were, nor are the grains and other things used in feeding poultry. But if the farmer has to use high-priced feeds for his fowls it greatly reduces the profits from his flock.

The farmer ought to pay more attention to pasturing his fowls than he does, as this will save enormously in the food bill. One of the very best poultry pasturages we have ever known is based on rape. Rape belongs to the same family as the turnip and the cabbage. Its leaves are as good a food for poultry as they are for other stock. Pastures are now being planted to rape for a sheep feed.

Essex rape is the kind that should be secured. Mistakes are often made in the seed, and bird rape is sold instead of the other kind. The bird rape has too little foliage. It branches out abundantly on all sides of the main stem. Fowls soon become very fond of it, and as soon as they are turned out in the morning they attack the rape vociferously. Throughout the day they feed on the green rape. This food in addition to their grain food makes a good ration and helps keep their digestive organs in a perfect condition. The rape should be sown in the spring, about the first of May, or earlier, if the danger of frost is not great. The seed will take root, even on unprepared ground, if it is bare of other vegetable growth. In a few weeks the fowls may be turned onto it and another little patch may be planted to rape.

Divide the poultry yard by a wire-netting fence, so that rape or other forage may be kept growing in one side while the fowls are pasturing in the other side. The rape may be sown over and over again till the fall frosts stop its growth. When the fowls have stripped the leaves from the stalks, just give a patch a rest and the leaves will soon grow out again. Rape is one of the most profitable things that can be fed to poultry.

In many places where poultry are being kept under about ideal conditions, pasturage is provided for poultry. In many instances oats are grown for that purpose, but it is doubtful if the fowls relish the forage from oats as they do rape. Lettuce is a green feed the fowls like very much, but there seems to be no particular reason for growing it where rape can be grown.

Every farmer that raises poultry and every person in the village that keeps poultry should have a bone mill, because this makes it possible to make use of bones, which can be easily secured. It is surprising to find how many poultry keepers there are who have no bone cutter and throw away the bones that come in the meat used on the table. In some families this must amount to several hundred pounds of bones a year, which would make several hundred pounds of excellent food for poultry. Then, too, the man that owns a bone mill can buy bones from the local butcher at a very low price.

Meat meal, one part mixed with five parts of ground grain, is the most profitable feed the writer knows of for young chickens. It will assist their growth mightily and bring them to maturity in a very short time.

At the Boston Show there was a Students' Fowl Plucking Contest, and the first award went to the Maine Agricultural College, represented by R. E. Jones and C. F. Dunlap. Every student had two birds to pluck. Mr. Jones finished his first bird in 9½ minutes and his second in 7 minutes. Mr. Dunlap plucked his two birds in 22 minutes, making the team time 38½ minutes. The Ontario (Canada) students were second in 53 minutes. The Maine students were complimented on the finish they gave their birds.

Number of Hens to Pen.

The Maine State Experiment Station made a test to ascertain the most profitable number of hens to be kept in a pen. All the pens were 10x16 feet, giving 160 square feet in a pen. The hens were Brahmas and Plymouth Rocks, and the test continued six months.

The hens were fifteen, twenty, twenty-five and thirty to a pen. The conditions and hens were as much alike as to make the test a conclusive one.

The pen with fifteen hens made a profit of 80 cents per hen, and the eggs layed numbered 976.

The pen with twenty hens made a showing of 1,208 eggs for the pen and a profit of 71 cents per hen.

The pen with twenty-five hens made a laying record of 1,328 eggs and a profit of 35 cents each hen.

The pen with thirty hens had an egg production of 1,200 and a profit of 30 cents for each hen.

This experiment shows distinctly that hens can be so crowded as to reduce the profit of an egg farm. The difference of twenty-five eggs per hen per six months is great. On the basis, the pen with fifteen to the pen, the profits of the total of ninety hens were $72; on the basis of thirty to the pen the profits were $36. In each case the actual cost of feed was deducted. The best authority on poultry says that plenty of room is as important as plenty of feed.

POULTRY NOTES AND ITEMS.

There ought to be more incubators in the country to hatch out these eggs which in country places are bringing but 10 to 13 cents a dozen.

During the year 1910, at St. Louis, the wholesale prices for eggs ranged from 14½ to 35 cents a dozen. The lowest price was in June and the highest in January.

During the year 1901 eggs from the country sold by the case on the St. Louis market at 6 to 25 cents a dozen. That was the range of prices for the entire year.

During the year 1910, at St. Louis, large numbers of eggs were bought at 19 to 20¼ cents a dozen and placed in cold storage for a rise in values. This year, in St. Louis, the speculators are trying to agree amongst themselves not to pay over 14 cents.

The total receipts of eggs at St. Louis during the year 1910 was 1,375,638 cases, against 1,395,987 cases in the year 1909. In the year 1910 there were 741,696 cases of eggs shipped out from St. Louis.

From the Rocky Mountain Husbandman: "Carlos Meigs, of the Yellowstone, reports $700 from a flock of 300 fowls last year. This is $2.33 1-3 cents per head and is a good business."

Mr. Earl Tibbetts, in the Poultry Standard, makes the statement that nine-tenths of all the large egg farms in the United States are stocked with the noble breed of Single Comb White Leghorns.

The egg speculators of St. Louis have decided that 14 cents a dozen is the cost limit of eggs for storage, and they need a half cent a dozen more for safety and handling, therefore the buying price is 13½ cents. This does not mean that they divide profits, but it is a recognized basic price. It really is a buying combination to keep down the price of eggs.

"Eggs are what I want, and I can say positively that the Single Comb White Leghorn is the queen of them all when it comes to shelling out the eggs; and, moreover, they are of good size and have white shells, the kind that are in demand in the New York and Chicago markets."—Earl Tibbetts, in the Standard.

Free Amatite Sample.

Farmers are conservative and reluctant to experiment with novelties until they have thoroughly investigated them. Some farmers are still sticking to the old-fashioned smooth-coated roofings which require regular painting simply because they don't know very much about the new mineraled-surfaced type. Probably they do not realize how easy it is to find out all about the new kind of roofing that needs no painting. All that is necessary to do is to write to the manufacturers of Amatite Roofing, asking for a free sample. It will be sent by return mail and involves no obligation whatever on the part of the inquirer.

Address the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans, Seattle.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid**, one that received the gold medal at the National Rose Society. The flowers are rich velvety red. Another one is **The Bride**, one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care. The flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose. The flowers are very large, and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete. It is unequaled for size of flower, fragrance or beauty. **Crimson Rambler, the** last of the collection, is a bright crimson flower that covers the entire bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled "**The American Beauty Rose.**" The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy, ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Sheep-shearing Contest.

On Friday, April 14th, the Animal Husbandry Department of the Ohio State University will conduct a public shearing exhibition with shearing competitions. The work will begin about nine in the morning and will occupy the greater part of the day, with an hour for dinner, from twelve to one.

In several different years shearing exhibitions have been held at the Ohio State University. The last exhibition, which was held in April, 1909, was the most successful. Not only were a large number of sheepmen present, but much interest was taken in the exhibit of hand and machine shearing. Arrangements will be made for a few prizes, and the opportunity will be given to study the use of the machines, and also for men who are experts with the hand shears to give an exhibition of their proficiency with this tool. The University will exhibit some interesting specimens of wool, and every effort will be made to make the day an attractive one for visitors.

The event will take place in the Live Stock Judging Pavilion, which will seat fully 500 people, and where everybody may be comfortable, no matter what the outside weather may be. All interested are invited by Professor C. S. Plumb.

The Wool Situation.

Boston authorities figure the wool clip of the present year at 275,000,000 pounds. This is about 25,000,000 pounds less than the average clip. Boston, being the terminal market, is waiting for the movement of the clip, and the only dealers contracting wool in advance of the clip are St. Louis operators. Buyers who will start from the East for the West to pick up anything they can get as cheap as they can will be prepared to bid low prices. A Boston market authority places the market basis at 10 cents lower than last year. One great influence which is feared throughout the trade is Congress.

SHEEP AND GOAT RAISING.

On March 13th, E. D. McIntyre, shipping from Topeka, Ind., sent in ninety-seven wethers that averaged 136 pounds on the Chicago market, which were sold by Clay, Robinson & Co. at $5.30 per 100 pounds. The price was five cents per 100 pounds higher than any other wethers sold for on the Chicago market since last June.

At the Paris Live Stock Show a lot of fifteen wether lambs, weighing 110 pounds, were the champions. They were Southdowns, a breed which is becoming very popular in France.

Early as it is in the season, it is reported that 10,000 pounds of mohair clipped from goats in Southwest Texas have arrived at San Antonio to the care of the Wool Growers' Central Storage Company. The principal consignor is E. R. Jackson, who ranches near Sonora, and who is mentioned as the largest grower of mohair in the state of Texas.

Captain B. L. Crouch, of Corpus Christi, in a letter to the Texas Stockman and Farmer, advises Texas sheep and goat raisers to send a delegation to Washington to look after their interests. The Texas Stockman and Farmer endorses this, saying that if they do not look after their interests no one else will.

At the Feeders' and Breeders' Show held recently at Forth Worth, Texas, Alex. Albright, of Dundee, Archer county, won thirty-six premiums with pure-bred Rambouillets, Cotswolds and Lincolns. The Lincolns are his favorites and do well in Texas.

Roberson Bros., of Frisco, Collin county, won the car-lot sheep championship at the Fort Worth (Texas) Farmers' and Feeders' Show, also the wether championship. They had a fine exhibit of yearlings.

The Shepherds' Journal says: "When a lamb refuses to suck, it is probably suffering from constipation, or it may be its teeth are bothering it, by being imperfectly cut. In the former case, give an injection of warm, soapy water, and in the latter rub the gums gently until they are cut through."

The Daily Live Stock World of Chicago mentions W. P. Adams & Son, of Odebolt, Iowa, as having fed and fattened 13,000 lambs and 2,000 sheep for market this winter. They buy their feeding stock at Omaha and ship their fat stock to Chicago.

Amatite Roofing on houses of D. M. Cook, Chicopee Falls, Mass.

Amatite ROOFING

When the Shingles Fail

Here are two houses which were originally covered with shingle roofs. Modern shingles are not made like old style shingles, but are of inferior wood on account of the increasing scarcity of lumber. Accordingly, shingle roofs gave trouble, and the owner investigated the whole subject of the roofing with the result that he found it cheaper to cover the whole roof with Amatite Roofing than to try to keep the old shingles in repair.

Amatite Roofing is so low in price, so easy to lay and so durable that it is by far the cheapest and most satisfactory answer to the problem of the leaky roof. With other roofings of the kind that require painting, this is not the case. To lay ordinary roofing over shingles and keep it painted would be just as expensive and troublesome as to keep on repairing the shingles. But Amatite Roofing requires no painting. It has a mineral surface to take the wear and tear of the weather.

Amatite Roofing costs nothing to maintain; that is why the owner of these houses used Amatite. On these houses, the Amatite is laid right over the old shingles, so there was no expense or trouble in ripping off the old roof.

Amatite, despite its mineral surface, comes in handy rolls like any other roofing and can be laid by any workman without previous experience.

Large headed nails and cement for the laps are supplied free of charge. Remember that Amatite costs less than ordinary roofing of equal wear and costs nothing whatever to maintain. It is rapidly displacing shingle roofs and painted roofings.

Booklet and sample free on request. Address our nearest office.

BARRETT MANUFACTURING COMPANY

New York Chicago Philadelphia Boston St. Louis Cleveland Pittsburg Cincinnati Kansas City Minneapolis New Orleans Seattle London, England

TRADE B MARK

STEEL SHINGLES EASILY APPLIED.

A new catalogue has been issued by the makers of the Edwards Reo Steel Shingles. This is a roofing worth studying. This is designed to satisfy the requirements of contractors and builders. It is becoming a very popular roofing with farmers. The shingles are stamped into sheet steel, the sheets are joined together without solder by an interlocking device, which is much better, that protects the nails and allows for expansion and contraction. It is easily applied, gives fire protection and is guaranteed against lightning. The first cost is about the same as wood shingles, and it is claimed that steel shingles will outlast wood shingles four to one. A hammer and a few nails are the only tools required to apply these steel shingles, and it is an easy matter for anyone to do what would be called a "finished job" by a skilled workman. All interested should write to Edwards Manufacturing Company, Lock street, Cincinnati, Ohio, and ask for Catalogue No. 457.

HONORS IN ILLINOIS GO TO DE LAVAL USERS.

At the Illinois Dairymen's Convention held at Elgin, Ill., January 17th to 20th, in the Creamery Class D. W. Annis, of Kaneville, Ill., won the highest score; and George Brayer, of Harper, Ill., second. Both use De Laval Cream Separators.

Shear Your Sheep with this Machine

It makes the job infinitely easier than with the old hand shears. It takes the wool off evenly all over the body. It never injures or mains sheep like hand shears and the evenness of work done by this machine nets you from 10c to 40c worth more wool per head.

This Stewart Ball Bearing Machine No. 9

is the only sheep shearing machine ever made with ball bearings throughout and with a ball bearing shearing head. It has all gears cut from the solid steel and made file hard. They are all enclosed in a dust and dirt proof gear case where they run constantly in oil. It turns easiest of all shearing machines and anyone can operate it and do good work. Any of your help can operate it well from the very start. The price, all complete, with four combs and four cutters is only **$11.50**

Get one from your dealer or send $2 and we will ship C. O. D. for balance. Write today for copy of our free copyrighted book, "Instructions on Shearing Sheep," by the leading American expert. DO IT NOW.

PRICE, $2.00.
Mack Bros. & Co. SPENCER, - IOWA.

THE TARIFF AND THE FARMER.

"The present tariff law was passed by a Republican Congress and signed by a Republican President, and that law took the tariff off of hides. What has been the result? The farmers and stock raisers are now receiving less pay for hides than they received before the duty was removed and the price of shoes has advanced."—Lampasas (Tex.) Blade.

"Let me call your attention to a few provisions of the bill which discriminates most unfairly against the farmer. Wheat is to be admitted free of duty, while flour is taxed 50 cents a barrel. If the object of this bill is to reduce the cost of living, why not reduce the tax on flour, which is what the people consume?"—Senator Dick to the local societies of the State Grange of Ohio.

"The bill admits all live stock and all other live animals, and poultry, dead or alive, free of duty, but it imposes a tax of 1¼ cents a pound on fresh meats, bacon and hams, and meats of all kinds, dried, smoked, salted, in brine, or prepared or preserved in any manner. Why should the farmer be thus discriminated against?"—Senator Dick before the State Grange of Ohio.

Senator Wm. E. Borah, of Idaho, says: "My opinion is that the American farmer is getting the worst of it. Very much the worst of it. All over the country."

"The millers of Minneapolis are whooping it up for reciprocity. They want free wheat from Canada. But why are they not willing to give up that 50 cents a barrel on flour?"—Cedar Rapids Republican.

"When the American farmer is compelled to sell cheaper the things which he produces, he is also compelled to buy less of the products of manufacture."—American Economist.

"The price of eggs has dropped to a very low point, but no one is blaming it to the tariff. Yet, when eggs were away up, because all the hens had quit laying and last summer's supply was in cold storage, no one thought of blaming anything but the tariff for the high price of hen fruit."—Binghamton Republican.

"And here let me point out that the price of wheat has fallen 30 cents per bushel since a year ago. Has the price of bread to the consumers of our cities fallen 25 per cent.? You know that it has not, and if as the result of reciprocity the price of wheat is forced still lower, it will not benefit the consumer, for flour is still taxed by a tariff duty of 50 cents per barrel."—N. J. Batchelor, Master National Grange, before the Senate Committee.

PURE-BRED STOCK ITEMS.

The famous herd of O. I. C. swine bred and owned by Alvey Bros., of Meriden, Kas., have won many premiums at the greatest Fairs. They will have some fine February and March pigs for sale. See card on page with other live stock breeders.

On March 10th, W. J. Davis & Co., of La Vernet Stock Farm, Jackson, Miss., held the first auction sale of Hereford breeding cattle in that state. The general average was $220 per head; $241 for bulls and $170 for females. The top-price female was Victoria, calved February, 1909, in Texas, and sold for $225 to Mississippi Farms Company, of Wiggins, Miss. The top-price bull was Shadeland Beau, calved in Texas, October, 1906, and sold to Sid Coleman, of Meridian, Texas, at $345. The states of Alabama, Louisiana, Arkansas and Mississippi furnished the buyers.

At Kansas City, on March 7th and 8th, a sale of Hereford cattle conducted by Dr. R. T. Thornton resulted in an average of $174.66 for fifty-nine bulls and $127.14 for thirty-five females. A. G. T. Cooper, of Dorance, Kas., paid $500 for Guy, 360,134, a fifteen-months-old bull consigned by Jas. A. Gibson, of Odessa, Mo. The top-price for females was $205, paid by O. S. Gibbons & Sons, of Atlantic, Iowa, and Frank Harlan, of Troy, Mo. T. P. Crawford, of Butler, Mo., paid $400 for the bull Beau Folly, 2d, calved November, 1909, consigned by S. J. Gabbert, of Dearborn, Mo.

At the Cattle Show in Paris, France, held recently, the grand champion lot of steers averaged 2,044 pounds. There were four head. One steer, not in this list, a Shorthorn cross on one of the native breeds, weighed 2,717 pounds.

A fat barrow, a member of the Craonnaise breed, a yearling, weighing 759 pounds, was grand champion in a Live Stock Show at Paris, France. Three in a pen farrowed in May, 1910, averaged 582 pounds. They appear to have some early-matured hogs in France.

Mr. S. Y. Burks, of Bolivar, Mo., is advertising pure-bred Poland-Chinas and Berkshires. He has both breeds and has won many prizes with stock of his own raising. He is a breeder in good standing.

Trumans' Pioneer Stud Farm of Bushnell, Ill., received their March importation of Percheron and Shire stallions in excellent condition. The Shire horses for the most part were purchased at the London Horse Show, and the Percherons are a specially-selected lot of three-year-old dark gray and black stallions. A visit to Trumans' is like going to a Horse Fair.

The St. Louis Wool Market.

This is a year in which it is very likely wool growers will find it to their interest to consign their wools for sale to commission salesmen. Prices are comparatively low at all markets and the speculators in wool who are traveling through the country looking for bargains are also figuring on several cents a pound profit. The sheep raiser ought to place his wool as near to the real market as he can in his own interest. Messrs. A. J. Child & Sons, of St. Louis, advertise for consignments and can be relied upon for skill and ability in selling the wool to the best advantage. This reliable firm has done business on the St. Louis market for thirty-seven years. Our readers will do well to write for their 1911 wool circular. Address, A. J. Child & Sons, St. Louis, Mo.

Steel Shoes For Farm Work.

Mr. Ruthstein, the inventor, wishes to tell you why one pair of his shoes will outwear six pairs of leather shoes in farm work; that they do not cause foot fatigue. Write for his free book. Address, N. M. Ruthstein, 154 Seventh street, Racine, Wis.

FARM AND RANCH LANDS.

ARKANSAS.—The new corn country and best alfalfa lands in Little River county; 1,000 acres Red River land; finest stock and grain farm in this section at a bargain. Hogs and cattle raised here cheaper than elsewhere. Address, **W. R. Cavett,** Shreveport, La.

TEXAS.—2,600 acres, 11 miles from Sabinal, Uvalde county; about half agricultural; balance excellent grazing. Price, $7.00 per acre; half cash; deferred payments to suit the purchaser. Address, **Albert D. Evans,** North Fort Worth, Texas.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WE GUARANTEE TO SELL YOUR FARM FOR CASH, no matter where located, within thirty days. Commission basis—no retaining fee—we get the money. Address,
PIONEER LAND CO., 6 Central Block, Decatur, Illinois.

FARMS WANTED! Don't pay commissions. We find you direct buyers. Write describing property, naming lowest price. We help buyers locate desirable properties FREE. **AMERICAN INVESTMENT ASSOCIATION, 55 Palace, Minneapolis, Minn.**

SPLENDID CROPS
in Saskatchewan (Western Canada)

800 Bushels From 20 Acres

of wheat was the thresher's return from a Lloydminster farm in the season of 1910. Many fields in that as well as other districts yielded from 25 to 35 bushels of wheat to the acre. Other grains in proportion.

Large Profits

are thus derived from the **FREE HOMESTEAD LANDS of Western Canada.**

This excellent showing causes prices to advance. Land values should double in two years' time.

Grain growing, mixed farming, cattle raising and dairying are all profitable. Free Homesteads of 160 acres are to be had in the very best districts; 160-acre pre-emptions at $3.00 per acre within certain areas. Schools and churches in every settlement, climate unexcelled, soil the richest; wood, water and building material plentiful.

For low settlers' railway rates and illustrated pamphlet, "Last Best West," and other information, write to Sup't of Immig., Ottawa, Can., or Can. Gov't Agt. (52)

The Gedge Automatic Fountain

is the most profitable article you can have on your farm. Use it to fatten your hogs and other stock more quickly. Pure water convenient to stock is as important as proper feeding. Learn all about the Gedge and our **Free Trial** offer. Send today for free Illustrated Booklet.

GEDGE BROS. IRON ROOFING COMPANY
2447 Fletcher St., Anderson, Ind.

Another Breed of Oats.

Messrs. Garton Bros., of Warrington, England, are renowned as breeders and improvers of good grains. Their improvements in oats alone have placed them in the foremost ranks of agricultural specialists. Professors of Agriculture who have devoted their lives to agricultural advancement admit the wonderful benefits derived from the Warrington seed farm. During the past season Messrs. Garton have introduced a new breed of black oats. Victor is the name. The Victor is the largest-grained black oat and the blackest-skinned oat in cultivation. Especially suitable for early sowing, owing to its extreme hardiness. The amount of protein or flesh-forming constituents which the grain contains makes it 25 per cent. more valuable for feeding purposes than any other oats grown.

It will be remembered that a few seasons ago we offered some sample oats produced by Messrs. Garton as a subscription premium and offered some prizes at State and National Fairs and Expositions. We consider a small quantity of the Victor oats capable of reproducing itself, so that our patrons can win prizes if they will exhibit the product in any state. We therefore advise our friends and patrons to at least obtain sufficient of these black oats for experimental purposes.

Do you wish to win prizes? If so, send us a dollar for two-years' subscription to The National Farmer and Stock Grower. We will also send you two pounds of Victor oats. From this you can raise your own seed hereafter and win prizes at County, State and National Fairs. We offer the same premiums that we do for corn on page 26. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Meritorious Farm Machine.

The McKinney Traction Cultivator Company, originating at Gainesville, Ga., have recently made headquarters at St. Louis to demonstrate a gasoline tractor for plowing, seeding and cultivating grain crops. This machine is new, inasmuch as it is designed to work rolling and uneven land and to be used economically on comparatively small farms. A demonstration on Saturday, March 25th, in a corn field on the outskirts of East St. Louis indicated that the invention was fully up to the standard claimed by the inventor. The first machines for the market will be made at the works of the St. Louis Car Company.

Home Mixing of Fertilizers.

By writing to the German Kali Works, Continental Building, Baltimore, Md., any farmer can obtain a booklet entitled "Home Mixing of Fertilizers and How to Do It." This is a very interesting publication, and every one of our readers can learn something from it. The whole story is told so clearly that it does not require an interpreter. The book includes a table giving the composition of all farm manures and commercial fertilizers, with formulas adapted to all crops and the amount of fertilizer ingredients taken from the soil by all farm crops. Send for it without delay.

Southern Stockmen, Attention!

There's Something Doing

"DOWN IN DIXIE."

Above is a drove of Mississippi-fed cattle which we sold at National Stock Yards, Ill., (East St. Louis), on March 6 at

$6.25 **Record Price for Mississippi . . Cattle on This Market . .** **$6.25**

This shipment consisted of 40 head of good Hereford beeves averaging 1,305 lbs., fed only about four months. The sale was an extraordinary one in view of the fact that prices are 75 to 80 cents lower than a year previous, when the same figure was reached in the Southern Division. These cattle were fed on the W. S. Lovell plantation at Palmyra, Miss. (O. Southall, Mgr.) Shrinkage was very light and the sale eminently satisfactory to the owner.

On March 15 WE AGAIN TOPPED THE WEEK'S TRADE at East St. Louis, selling 24 head of 1,054-lb. TENNESSEE cattle at $6.15.

SOUTHERN FEEDERS will do well to remember that our facilities for handling your business are exceptional. Having our own houses at East St. Louis, Kansas City, South St. Joseph and Fort Worth, as well as six other leading markets, you are at all times sure of unbiased advice and first-class service. Write us freely for any desired information.

FREE SOUVENIR
For Southern Stockmen

If you live south of "Mason & Dixon's line" and feed or ship live stock we shall be pleased to send you our beautiful 1911 "FLOWER GIRL SOUVENIR." It's well worth writing for.

(P. S.--If you don't happen to be a Southern man but want one of these souvenirs pretty badly we won't "draw the line" too closely.)

Blood Troubles And Skin Diseases

Quickly Succumb To The Beneficial Effects Of Stuart's Calcium Wafers.

Trial Package Sent Free.

Science has proven Calcium Sulphide to be the most powerful blood purifier known. Stuart's process of giving the system this great cleaner for the blood, has been called the best, for preserving the full strength of Calcium Sulphide.

Calcium Sulphide is not a poison. It is harmless, though greatly powerful.

Children may take it with freedom and their delicate organisms thrive with its use.

Skin diseases flee when the blood is charged with this great eradicator.

The blood at once feels its influence and eruptions cease and fade away almost beyond belief, so immediate is its action.

No matter what degree of eruptive skin trouble you may have, Stuart's Calcium Wafers will purify and enrich the blood. These little wafers go into the stomach just like the skin impurities get in. They tone up this organ, enter the intestines, are absorbed by the lacteals and lymphatics, are drawn into the blood, course quickly to every organ and atom of the body, and remove secretions and decay. The lungs are assisted, the liver is aided, the stomach re-inforced, and skin diseases are assailed from their source. All retreat for disease is cut off from the rear, and very quickly nature routs the effects of such maladies which appear in the form of pimples, eruptions, blackheads and scaly formations.

You have science backed up by years of actual proof when you take a Stuart Calcium Wafer. Not a mere feeble effort at relief, but a remedy of nature that has relieved human subjects greater in number by far than the entire army of America and Canada. For chronic or temporary blood disorders and skin diseases these wafers are without an equal.

If you will go to your druggist and ask him the virtue of Calcium Sulphide his answer will confirm these statements.

Stuart's Calcium Wafers, he will also say, are the most popular and scientific method of using this wonderful ingredient. They sell for 50c. per package, or send us your name and address and we will send you a trial package by mail free. Address F. A. Stuart Co., 404 Stuart Bldg., Marshall, Mich.

SWAT THE FLY.

F-L-Y Spells Death, Disease and Drudgery.

Every living fly is a crime against society. Consider for yourself the number of times you have seen flies feeding on sputum, on garbage, on filthy excreta from the privy vaults. It is disgusting — yes — but they like it.

From their breeding place in horse manure, they dance and prance over our meat markets, our fruit stands and bakeries. They scrape their feet, rub their wings and drop their specks on our sweet cake—yet we eat it. Do you like it? They creep and crawl leisurely in and out of the babies' sticky mouths.

Motchhikoff found 3,200,000 microbes in one cubic centimeter of water in which grapes had been washed. There is an enormous increase in the death rate of children from diarrhoeal diseases in the summer months. The fly is responsible for it. A single fly caught in New York carried 100,000 fecal bacteria in his mouth and on his feet. In New York alone 7,000 children die annually. They are our national wealth. Shall we kill them with flies?

In Denver, in the fall of 1908, fifty-six cases and six deaths from typhoid fever resulted from milk along the route of one of the milkmen whose milk was found contaminated by flies which had fed upon typhoid excreta from an uncovered vault.

Have you ever thought of the expense of disease and drudgery to a community? Dr. Daniel D. Jackson, Bacteriologist for the Department of Water Supply of the City of New York, says that it is conservative to estimate that the diseases transmitted through the agency of the house fly cut short the average span of human life in the United States by at least two years. During a generation this means a loss of 170,000,000 human lives, or 4,000,000 lives of the present average length, or a money loss of $20,000,000,000.

The life of a fly is about ten days. There may be twelve to thirteen generations in a summer, and the progeny of a single fly may be a sextillion (1,000,000,000,000,000,000) at the end of a season.

Let us join in a campaign to annihilate the fly from the nation—screen, poison and prevent.—W. G. Sackett, Colorado Agricultural College, Fort Collins.

The Woman Who Has a Chance.

There have been printed articles appearing lately in several publications, which have for their theme the opportunities which the city offers country girls These articles may be very good in themselves, but many of them are misleading because the girl who has always lived in the country does not know exactly how big the difficulties will loom, once she is in the city. Fifteen or twenty dollars per week seems to her a big salary (and so it does to many a city girl who is receiving six or eight dollars and scarcely keeping soul and body together on the sum) and she begins to figure what all she could do with it. But most of the country girls do not realize that were they to spend the whole of that salary on board and clothes alone, they could scarcely live as comfortably or as happily as they do right on the farm in their own homes. Any saving that amounts to much out of that wage must be done by self-denial. The opportunity—the great, big opportunity, spelled with capital letters—is within the grasp of the women on the farms. When one man can make over $15,000 a year selling chickens and eggs, isn't there a field for women staying in their country homes? He is a specialist. True. But he had to make a start and had to learn by doing. No inexperienced girl starting to work in the city lands a twenty-dollar-per-week job. If she gets eight dollars she may consider herself fortunate, and she may even be glad of an opportunity to start in at six dollars.

One man made $750 a week exhibiting a prize hen at poultry shows; another gets $20 a setting for some of his best stock; another sells his prize birds at $100 apiece and has disposed of about fifty at that price. Isn't there an opportunity?

Then there is squab raising. Commission firms find it hard to fill their orders. One Eastern firm calls for five thousand squabs daily.

The dairy is another place of opportunity. Scrub stock in any line will never bring a fortune. But no one who goes into a business to win is going to hang onto scrub stock very long. They may have to use it as a starter, but it will be replaced little by little by blooded stock until only a pure-blooded, selected strain remains. The little Jersey cow that yielded her owner over $500 profit in one year from the sale of her milk (at ten cents a quart) is an example of what the best will do. That is a pretty good record, but this little animal further covered herself with glory by presenting her owners with a bull calf that sold for something like $5,000.

One woman made a business of raising mushrooms, which she gathered and dried and shipped in barrels to the city. Another put sheep on some worn-out hills on her father's farm and the next winter sold lambs at $15 and over apiece.—Janet Thomas Van Osdel.

FAT is Dangerous

It is Unsightly, Uncomfortable, Spoils the Figure, Causing Wrinkles, Flabbiness and Loss of Vigor.

Let me send You my Proof Treatment absolutely Free. Would You like to Reduce Your Fat a Pound a day?

Note what my treatment has done for others; let me reduce your weight.

Lost 115 Pounds. Mrs. E. M. Reynolds, Lehigh, Iowa, writes: "When I began your treatment I weighed 285 lbs. I now weigh 170 lbs., & **never felt better** in my life. My bust measure is reduced from 54 inches to 38 inches; waist from 42 in. to 28 inches."

Permanent. M. E. King, 5634 Spaulding Ave., Chicago, writes: "By the Dr. Bradford Method. **I reduced 85 lbs.** eight years ago; haven't gained an ounce since. Rheumatism also cured."

Lost 112 Pounds. W. C. Newburn, Contact, Nev., writes: "I have lost 112 lbs., am **wonderfully benefited** in heart and general vigor. Can climb mountains easily now."

Lost 98 Pounds. Mrs. J. H. Wooldridge, Galena, Mo., writes: "My figure and appearance have been wonderfully improved; have lost 98 lbs. **Friends amazed."**

Many other testimonials from well known persons will be mailed with **FREE PROOF TREATMENT.**

I could fill every page of this journal with testimonials from grateful patients.

It is dangerous, unsightly, uncomfortable, and embarassing to be too fat. Excess fat weakens the heart. The liver, lungs, stomach and kidneys become diseased, the breathing becomes difficult and the end may come in **HEART FAILURE** and sudden death. You may save yourself from these **DANGERS.**

I want to prove to you that my treatment has positively reduced legions of persons to normal, no matter where the excess fat was located: stomach, bust, hips, cheeks, neck. Weight is quickly and safely reduced without tedious exercise or starving. Eat what you like. **Your figure will be beautified; wrinkles disappear.** Rheumatism, asthma, shortness of breath, kidney and heart troubles usually leave as the fat goes away. I will send you without a cent of charge to you my PROOF TREATMENT FREE.

FREE

Don't miss this offer. My PROOF TREATMENT is FREE. It should make you feel better at once. I will also send you **Free** my **new book of advice,** together with testimonials from many well known people. **Write to-day.** DR. H. C. BRADFORD, **287 B** Bradford Building, East 22d St., New York, N. Y.

NOTE.—Dr. Bradford is a diplomated, practising physician, licensed and registered by the State of New York. famous many years as a specialist in reducing fat and improving health by scientific, gentle, home treatment

Hard to Please.

Early in the season a man applied at a farm house for board, but the farmer slowly shook his head. "I'd be glad to keep you," he said, "but the city people are too hard to please."

"I'm not at all exacting," the applicant replied. "You will find no difficulty in pleasing me."

"That's what the last man who come along here said, but it wasn't so. Fact is, nothing pleased him. First he complained about sleeping in a bed with the hired man, and when we gave him a bed to himself in a room with four of the children he was still dissatisfied.

"Then he didn't like to use the towel we all used, and he wanted a wash basin in his room. Nothing suited him at all. I don't know whether you would be so hard to please or not."—Youth's Companion.

A Horse For Sale Again.

The late Senator Elkins used to tell a story of Bige Brown.

Meeting him one day in the main street, the Senator said:

"Bige, do you know of anybody that's got a horse for sale?"

Bige, chewing gum, gave the Senator a patronizing smile.

"Well, Senator," he said. "I guess Bill Hurst has. I sold him one yesterday."—Washington Star.

Consumption Book FREE

This valuable medical book tells in plain, simple language how Consumption can be cured in your own home. If you know of any one suffering from Consumption, Catarrh, Bronchitis, Asthma or any throat or lung trouble, or are yourself afflicted, this book will help you to a cure. Even if you are in the advanced stage of the disease and feel there is no hope, this book will show you how others have cured themselves after all remedies they had tried failed, and they believed their case hopeless.

Write at once to the Yonkerman Consumption Remedy Co., 4724 Water Street, Kalamazoo, Mich., and they will gladly send you the book by return mail free and also a generous supply of the New Treatment, absolutely free, for they want every sufferer to have this wonderful remedy before it is too late. Don't wait—write today. It may mean the saving of your life.

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over

the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Resolutions on Reciprocity.

The following resolutions were adopted by the Farmers' Institute Convention at Ottawa, Ill., February 22, 1911, and fully sets forth the views of the editor of The National Farmer and Stock Grower. The resolution refers to the state of Illinois, but it equally applies to all the states.

The Resolution.

Whereas, Scientific agriculture demonstrates that with improved methods of farming and treatment of the soil the products of the farms of Illinois can be doubled in the next ten years; and,

Whereas, For many years to come there will be a surplus and exportation of farm products to foreign countries, and until that time arrives there is no substantial reason for the free admission of the produce of the cheaper lands of Canada to our markets; and,

Whereas, We look upon the proposed reciprocity treaty with Canada as a one-sided affair, calculated to greatly enhance the value of the undeveloped lands of the Canadian Northwest to the consequent depreciation of our own agriculture; and,

Whereas, The prosperity of our own farmers means good times in all lines of business, and further depression of prices of corn, oats, wheat and live stock other than results from competition among people of our own community, is an unwise policy; therefore, be it

Resolved, That we, as representative farmers of Illinois in state convention assembled, believing it would be detrimental to the best interests of the people of this country and to agriculture in particular, do hereby protest against the ratification of the so-called reciprocity treaty with Canada and earnestly petition the honorable members of the Senate of the United States to carefully consider the interests of agriculture and to reject said treaty; and be it

Resolved, That these resolutions be forwarded to the President of the Senate of the United States, that they may be read in open session of the Senate.

Swinging in the Old Apple Tree.

While the hammock has a legitimate place among the lawn fixtures, it is lamentable that the old-fashioned swing is in many places almost obsolete. For genuine exercise the child can find more pleasure and benefit in its use than in all the hammocks and lawn swings that can be found. A good, stout rope and a strong limb render it safe under sane treatment. And the child should be taught what this treatment is.

If the seat is secured by the rope passing through holes in the end there will be no danger of its slipping out when the occupant is in mid air. If you have a child about the premises, hunt up a place for the old-fashioned swing and encourage the youngster in getting the most out of it. If a suitable tree is lacking, fix it in the porch, where there will be the added advantage of protection from rain.

While reckless swinging and high swinging are to be avoided, if the rope is strong there is really very little danger, providing the child is trained to continually hold with his hands. There are the various motions of either one or two when seated, each calling for the employment of a different set of muscles in keeping the swing in motion. Then by standing up they can get quite a different movement. When tired of swinging, the boys will quickly learn the hand-over-hand method of rope climbing, a practice which puts the muscle into the arms.

Again, the exercise keeps one in the open air. It may be active or only passive, as desired. It is social, at least to the point where chums may have a good time. It is a tip-top method of real, hard play. It is an excellent place to rest. It is inexpensive. It is a typical place for nature study, the birds soon learning to regard the inmate of the swing as a part of the tree itself. Give the boy an old-fashioned swing and he will soon convert it into a gymnasium.—Bessie L. Putnam.

Cleaning Laces.

White waists badly stained with perspiration can be cleaned by putting them in a strong solution of castile or any pure soap, then placing in the direct sunlight until the yellow is withdrawn. To make the solution, shave one bar of soap and dissolve this in one to three quarts of hot water. The dirt is removed from the lace not by rubbing, but by swashing up and down in a new soap solution, and it is then thoroughly rinsed in two or three clear, warm waters. The lace is next stiffened in weak gum arabic water—one or two kernels to one pint of water. The gum arabic is added to warm water and placed over hot water until dissolved. It is well never to wring lace, but rather to squeeze the water from it. To dry the lace, it is pinned on a woolen blanket, or pad, which has been securely fastened to a table. Each point is firmly pinned and the lace is left until perfectly dry. Much may be done toward giving the effect of new lace if each point is not only carefully pinned out, but, when dry, picked out with the fingers.

The Meaning of "Gold-Filled"

BY far the greater number of men and women who buy gold watches choose a gold-filled case.

Gold-filled means two layers of solid gold stiffened with a layer of metal alloy between. It makes a firmer case than solid gold, and it costs much less.

If the two plates of gold are heavy enough they will wear a lifetime. But you see the temptation to irresponsible manufacturers to roll the gold layers to a mere film and increase the center layer of base metal.

What is worse, the maker of the shoddy filled case can stamp it "Guaranteed for 20 years" or "Guaranteed for 25 years," and there is no law to prevent him.

A good many jewelers buy and sell by the guarantee.

Remember when you buy your watch to inquire about the case. Remember, also, that the guarantee stamp is no safe guide.

Fortunately, there is a way you can protect yourself—a way you can be absolutely sure of wearing qualities. Demand a filled case made by the people who make the finest solid gold cases in the world. That means a "Crescent Filled Case" or a "Jas. Boss Filled Case"—both made by the Keystone people, who produce the Keystone Solid Gold Watch Cases.

If you want to be doubly sure, don't trust your memory—cut these trade-marks out of the magazine and take them with you to the jeweler.

These marks are standard with the fine jewelry trade, and have been for 50 years.

THE KEYSTONE WATCH CASE COMPANY

Established 1853 PHILADELPHIA

Please mention National Farmer and Stock Grower.

Silk laces are cleaned by brushing or rolling in corn meal, or magnesia. The dirt adheres to the flour, or powder, leaving the lace clean. When treated in this way, laces need more frequent cleaning, but appear more like new lace. Yellowed, white silk laces may be steeped in a hot bath of milk and borax and bleached in the sun.—Maude A. Propst, Colorado Agricultural College, Fort Collins.

To Buy Groceries Right.

Our readers are well acquainted with the great merchandise firm of Montgomery Ward & Co., and will be glad to know that they have issued a new pure-food grocery catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

TESTIMONIAL TO THE U.S. SEPARATOR.

Writing under date of December 14th to the Vermont Farm Machine Company, Bellows Falls, Vermont, Messrs. Guy D. Power & Son, of Massena, N. Y., breeders of Ayrshire cattle, said: "Gentlemen:—The No. 15 U. S. Separator is doing perfect work. The bowl is easily cleaned and kept in order; flushes well and easily. The machine runs perfect and turns easily. We used the No. 5 United States constantly for twelve years and have seen many different makes near us, but this is the most perfect in every way we have ever seen." Note—Anyone desirous of learning more about the merits of the U. S. Cream Separator should write to Vermont Farm Machine Company, Bellows Falls, Vermont, and ask for Catalogue 125.

DEAFNESS CURED.

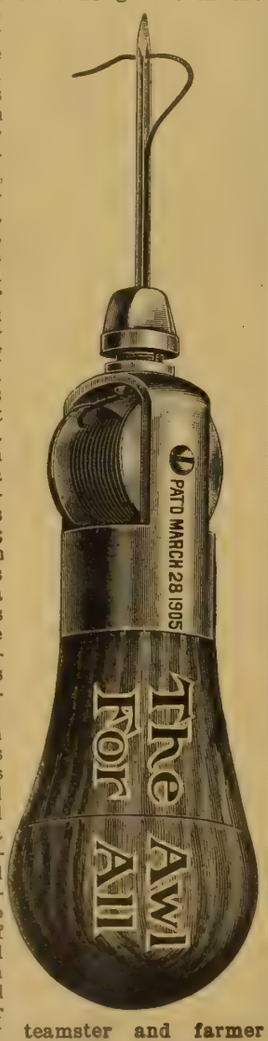
"I have demonstrated that deafness can be cured."—Dr. Guy Clifford Powell.

The secret of how to use the mysterious and invisible nature forces for the cure of Deafness and Head Noises has at last been discovered by the famous Physician-Scientist, Dr. Guy Clifford Powell. Deafness and Head Noises disappear as if by magic under the use of this new and wonderful discovery. He will send all who suffer from Deafness and Head Noises full information how they may be cured, absolutely free, no matter how long they have been deaf, or what caused their deafness. This marvelous Treatment is so simple, natural and certain that you will wonder why it was not discovered before. Investigators marvel at the quick results. Any deaf person can have full information how to be cured quickly and cured to stay cured at home without investing a cent. Write today to Dr. Guy Clifford Powell, 7984 Bank Building, Peoria, Ill., and get full information of this new and wonderful discovery, absolutely free.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

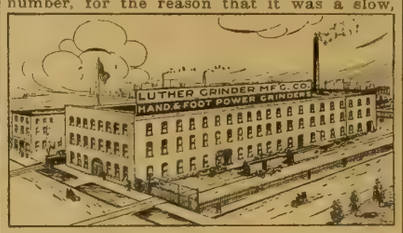


Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A GREAT FARM GRINDING MACHINE.

We are presenting herewith an illustration showing the plant of the Luther Grinder Manufacturing Company, where the Luther Farm Tool Grinder and parts which combine to make it a perfect machine, equal to the requirement of the farm, are made. Tool grinding has been and remains to a large extent a drudgery. By the employment of the Luther Farm Tool Grinder the sharpening of edged tools, plows, axes, scythes, ensilage knives, sickles, etc., may be done quickly and perfectly and in an extraordinary brief period of time. There is no hard work.

The success of the Luther Farm Special Tool Grinder is no doubt largely due to the fact that Mr. C. J. Luther, President of the Luther Grinder Manufacturing Company, was born and raised on a farm, was a boy behind the grindstone, and learned from actual farming experience what constituted a practical grinding machine for farm use. Years ago he became convinced that the grindstone was destined to become a back number, for the reason that it was a slow,



laborious and unsatisfactory method of grinding tools, and later found that the emery wheel, although being a somewhat better sharpening substance than the grindstone, was impractical, because it overheats and draws the temper from steel. When science discovered carborundum it solved the big problem of the right sharpening substance used in tool grinders, for the reason that it gives a perfect edge to tools, does not require any pressure, grinds so quickly it cannot heat metal, does not require cooling with water, and, best of all, is unlike any other sharpening substances in that it will not draw temper from steel. A booklet giving information as to prices and free trial offer may be had by writing to the Luther Grinder Manufacturing Company, 648 Newton street, Milwaukee, Wis.

Cleaning a Sweater.

Sweaters of any color may be washed and retain their shape and color to the last if carefully done, and it is not a difficult task, even for an inexperienced person; but like everything else of its kind, it needs a little care to prevent the sweater shrinking. A sweater should be washed when there is time to attend to it until it is perfectly dry, and the drying must be done at first "all of a heap," as the extra weight while wet draws them out of shape, and all the changes of water must be of the same degree of heat, and as warm as can be borne comfortably by the hands, and have plenty of hot water ready before beginning the work. Much of the success depends upon the drying process, as the garment must be pulled into shape three or four times while drying to keep it from shrinking, and it is always best to use rain water for washing the garments. First shake well to remove all dust and lint, then stir enough borax soap in the water to make a nice lather, but the soap should be dissolved in boiling water before using, and the garment may soak in the bath, covered with a cloth, for five or ten minutes. Clean the article by pressing and squeezing between the hands till it looks clean, then put through a light suds and then through two rinse waters, and never wring or twist a garment in the cleaning process, but put the article in a towel and press the water out in this way. After thoroughly cleansing and squeezing the rinsing water out, put the article on a clean, large platter and place near the stove and keep turning the garment and pulling gently into shape until perfectly dry; but at no time must the garment be held up and so given a chance to stretch. A sweater of any color may be washed through suds made with borax soap without fear of fading, and there is nothing better than this suds for cleaning baby sacques and caps and all such dainty articles; and if the article is not very soiled, a very light suds will clean it perfectly and leave it almost as soft as when new. A little bluing should be added to the last rinse water for all the white articles or for any garment that is any shade of blue, and they should be rubbed well through this water, as the color will be evenly distributed and the article will be all the same color.—M. A. T.

GRAND SUBSCRIPTION OFFER.

This glorious and beautiful picture is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

Mother and Child.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate little hands, and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the **Mother and Child Picture**, in colors, postpaid, and safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

THE KING HOE

A MARVELOUS TOOL

Changes the Old Hoe into a thing of Life and Power.

Saves Labor-puts 3 licks into 1, enabling you to get over double acreage—do the work better and with less muscle.

Saves Plants-Even a careless laborer will destroy no plants or injure roots when using the KING.

TRY IT AT NO COST

The King Chops and Weeds at Every Stroke

How It Operates-With one stroke the grass and weeds are cleaned from close up to the plants—the earth gently stirred and a slight hill made around stem of plant—and all without possible injury to roots or stem of plants. ("Weeding" attachment removed instantly when digging)

A FREE SAMPLE-To induce trials and for the purpose of quickly creating a demand for the Hoe, WE WILL SEND a SAMPLE King Hoe and 30 papers of "King's Royal Brand" vegetable seed, for the price of seed alone ($1.50). We pay Express on Extra Seed.

Agents-Allowed Exclusive Territory and Liberal Commission. Every one buys at sight.

T. J. King Seed Co. Richmond, Va.

QUICK HAIR GROWTH!

Brochure Free To You.

Would You Like Such a Result as This.

HERE IS THE TRUE METHOD

Let us prove to you that the Koskott Method of hair growing is the **genuine, scientific one.** We will send you a valuable brochure **FREE.** Our Method is directed at removing the cause, *dermodex folliculorum*—living micro-organisms—(germs), and opening the closed follicles so that the hair roots which are not dead, but dormant, (like a tulip bulb, or grass seed in a boule) are given fertility and a chance to grow. **Ours is the treatment that MAKES GOOD** or you can use it **WITHOUT COSTING YOU A CENT.** Koskott is for men's, women's & children's heads, to clear scalp of **dandruff,** stop **falling hair** and to promote **growth of new hair.** We especially want you to answer this if you have wasted time & money in liquids, washes, soaps, etc., which accomplish nothing. We want to **surprise & delight you.** Write (a post-card will do) mentioning you want our FREE BROCHURE.

FREE

Koskott Laboratory, 1269 Broadway, 515 B New York, N.Y.

NO MORE WHISKY ADVERTISING.

The TWICE-A-WEEK REPUBLIC of St. Louis, Mo., makes the announcement that no more whisky advertising will be printed in its paper. This will be good news to most of our readers. The TWICE-A-WEEK REPUBLIC is the oldest, biggest and best metropolitan semi-weekly newspaper in the United States, and by cutting out this line of advertising it should greatly increase its circulation in this community. The subscription price is 50 cents a year, but for a short time only they will make a special rate of three years for $1. Be sure to take advantage of this liberal offer, and by all means advise your friends and neighbors of the fact that all whisky and liquor advertising has been discontinued and that $1 will pay for a three-year subscription. Write for free sample copy. Send orders to The St. Louis Republic, St. Louis, Mo.

Don't Wear a Truss

FREE

STUART'S PLAS-TR-PADS are different from the painful truss, being made self-adhesive purposely to hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. Soft as velvet—easy to apply—inexpensive. Process of cure is natural, so no further use for trusses. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TODAY.

TRIAL OF PLAPAO

Address—PLAPAO LABORATORIES, Block 57, St. Louis, Mo.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for the troubles that you can depend on, and if you want to make a quick recovery, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you see it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

When Poor Lo Can't Win.

The late Green McCurtain, Chief of the Choctaws, had a high opinion of the business astuteness of white men.

"No Indian can get the better of a paleface," Chief McCurtain said to a Guthrie reporter during the recent Oklahoma investigation, "and when two palefaces get bargaining together then it is just like cutting diamonds with diamonds.

"Two Oklahoma palefaces once hunted in my camp. They spent the evening with me, and over the fire and the firewater they began to barter and traffic and to make deals and dickers. Finally Bill said:

"'Sam, let's trade horses—my bay for your roan.'

"'It's a go,' Sam agreed. 'The trade's a go. Shake on it, partner.'"

"They shook hands. Then Bill said, with a loud laugh:

"'Sam, I've busted ye this time. My hoss is dead. Died yesterday.'

"'So's mine dead,' said Sam. 'Died this mornin'. And, what's more, I've took his shoes off.'"—New York Tribune.

Why They're Short.

"Marriage," said George Ade, at a dinner in New York, "is a wonderful thing."

Mr. Ade laughed a cynical bachelor's laugh.

"Marriage," he went on, "changes people so. I met a man the other day who had recently married, and he looked so different that I said:

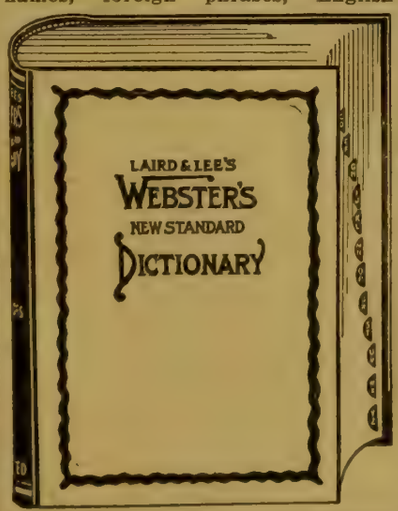
"'Why, my boy, I thought you were tall. But you're shorter than when I saw you last. You are actually short now.'

"'Yes, I am short,' he returned. 'I've married and settled down, you know.'"

WEBSTER'S DICTIONARY.

The Most Compact, Useful, Handy Book Ever Issued by the American Press.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; also contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English



word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces. Our offer to you: Send us One Dollar and we will send you the National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

What He Didn't Miss.

"How do you like this grand opera, Bill?"

"I can't undertsand what they are saying."

"That's all right. You ain't missing no jokes."—Pittsburg Post.

Exports of Swedish Dressed Beef.

Consul Stuart J. Fuller, of Gothenburg, Sweden, reports to the Department of Commerce and Labor that during the month of February, 1911, the abattoirs at Malmo exported 551,156 pounds of Swedish dressed beef, via Trelleborg and Sassnitz, to Berlin and Hamburg, chiefly, though some was destined for points as far south as Basel, in Switzerland. It will be seen from this item that the dressed-beef business is not confined to the United States or Argentine.

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone Watch Case. In order to understand this subject, see page 23. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

WHY THE BICYCLES CAME BACK.

Some people may not know it, but bicycles have come back. They went out because the manufacturers combined together and put the price up to twice what the machines were worth, and the consequence was that they went broke, one after the other. One manufacturer stayed in because he did not think it good policy to try and make 80 per cent. profit on one machine. The Mead Cycle Company is making dependable machines for one-third of what similar machines were sold for a few years ago. There never was any doubt about the bicycle; it was only a matter of getting a first-class machine at a reasonable price. Write to Mead Cycle Company, Dept. M 270, Chicago, Ill., and ask for catalogue.

HORSE OWNERS, DON'T HESITATE.

If you have any blemished horses, now is the time of the year to treat them and get them in condition for the early spring sales. Don't use "any old liniment," but procure one which is positive in its action and known to be an excellent preparation. Absorbine has been on the market for many years, and is popular among the horse trainers and horse owners. It will reduce bog spavin, thoroughpin, capped hock, big knee, etc., allay inflammation, and horse can be used during treatment. Write me about your case, so that I may give special instructions. Illustrated pamphlet sent free upon request. Absorbine at druggists, $2.00 per bottle, or sent direct, express prepaid, upon receipt of price. W. F. Young, P.D.F., 106 Temple street, Springfield, Mass.

A NOURISHING DELICACY FOR CHILDREN.

Children's appetites often are finicky things. There are times when nothing at all seems to suit them.

One cannot safely give them anything rich or heavy to eat, but there is one dish that will always appeal to them.

Just offer a child some Graham Crackers and milk and see how they will be welcomed. There is something so fascinating, so different about the delicious nut-like flavor of the Graham Crackers baked by the National Biscuit Company that they are looked on as a real treat.

They are packed in moisture- and dust-proof packages—you can tell them by the well-known In-er-Seal Trade-Mark—so that they retain all their original crispness, freshness and delightful taste when opened. Just get a child or grown person to try the National Biscuit Company Graham Crackers once and they'll be regarded as a delicacy ever after.

And since these Graham Crackers are made of the best of the wheat they're a nourishing and healthful delicacy, strengthening the digestion and appetite.

AGENTS EARN EASY $40 A WEEK selling my household necessity. Standard $1.00 value everywhere, which you can sell at 39 cents and make $90 Per Cent Profit. Everybody buys. L. T. D., Michigan, made $14 first day. W. A. W., Ohio, $64 one week, worked only 4 days. Mrs. C., Wisconsin, averages over $40 a week for a whole year. Write for terms, F. E. Greene, 28 Lake St., Dept. 71, Chicago.

Blood Poison

30-Day Treatment FREE

Remarkable Results Produced By New Vegetable Treatment Without Use Of Mercury or Potash.

The terrible results of mercury and potash on blood poison are well known. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms often break out, and you find that your bones have been rotting all the while. Your teeth may begin to loosen and your tissues, glands, brain and vital organs show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Medical authorities admit that this is so.

The remarkable new treatment, called the Obbac Treatment, is purely vegetable, containing positively no mineral poison whatever, no mercury, potash, narcotics or opiates. It has produced remarkable changes in only 30 days. Treat yourself privately at home, and become as free from taint as a new-born child.

The wonderful Wasserman Test, the only blood poison test known to scientists, has proven that a man has been completely purified by the Obbac Treatment.

Don't spend months and years of your precious life, and destroy your health forever by taking mercury and potash which doctors commonly prescribe. Write today. Send your name and address and complete description of your case to the Obbac Co., 1199 Obbac Bldg., Chicago, and they will send you at once in an absolutely plain, firmly sealed package, a full 30-day treatment absolutely free.

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. Large booklet containing valuable information FREE.

Raisins.

If canned fruit is scarce at this season, the time until fresh fruit is ready may be nicely patched out with raisins, which are reasonable in price if purchased in quantity. There are numerous changes and variations which can be made with them, thus obviating danger of this fare becoming monotonous.

A teacupful added to a plain cake renders it excellent and nutritious, even though lacking in butter and eggs. They also keep it moist and render it easy to keep cake ready for company, even if the family have little use for it every day.

When making bread, put sugar, raisins and spice if you choose, into one loaf and see how the children will relish it for the school lunch. It can be made quite sweet and serve for dessert, and if kept a week or two before using it will be all the better. Some with a large family of children find it economy to bake a cake in a large pan, thus have it ready for lunches for a week.

Those liking elderberries will find the pies wonderfully improved by the addition of just a few raisins. They give a richness in flavor which complements in the most pleasing manner the rather insipid flavor of the elderberries alone.

Oatmeal cookies made in the form of drop cakes are most appetizing and nutritious, having a nutty flavor enjoyed by all children; and if even a few raisins are added, the combination will be fully appreciated.

When making plain cookies, try mixing raisins with a part of the dough, or placing a single raisin in the middle of each cooky. This gives a pleasing variety, and you will note that the cakes with raisins are preferred by almost everyone.

SEED CORN PREMIUMS

Offered For the Fourth Year by The National Farmer and Stock Grower to Our Own Subscribers.

The National Farmer and Stock Grower originated the plan of corn improvement on farms by distributing small quantities of seed corn raised by champion corn growers and by offering additional awards when the corn grown therefrom wins prizes at State, Interstate and National Shows. We have originated about twenty-five thousand experimental corn breeding plots, from some of which county, state and interstate prizes have been won. The corn improvement originated by this paper has been so successful that it has contributed in no small degree towards the greatest corn crop ever grown — the crop of 1910.

Our Seed Corn For 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana. Mr. L. B. Clore has a son, Roy D. Clore, who grows his own, and with this very strain he won the grand championship prize at the National Corn Show which has just closed.

Four years ago we first contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

Our Subscription Premiums.

Anyone who will send us Sixty Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

The Premiums We Will Pay.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States, also at District Fairs.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

CONGO
NEVER LEAK ROOFING

Congo on Armour's Fertilizer Works, Buena Vista, Va.

Guaranteed Till 1921

THE year 1921 is a long way off, but a Congo 2-ply Roof laid in 1911 will be still in good condition then.

We don't merely *say* that Congo will last ten years; we *guarantee* it.

Our guarantee is not a mere formal "We-say-so;" it is a genuine Surety Bond issued by the National Surety Company of New York.

We can't do more than that to assure you that Congo really will last ten years.

When a man buys Congo he buys 10 years of protection.

Congo is easy to lay. Nails, cement and rust proof galvanized iron caps free in center of each roll.

Copy of 10 year Guarantee Bond and further information on request.

Congoleum We should like to send every reader of this paper a sample of Congoleum for flooring and wainscoting. It is fitted for use in homes, stores and offices. It is a perfect imitation of light and golden oak. Its surface has a high polish. It is unusually durable. The price is very low. Samples and further details mailed free on request.

UNITED ROOFING & MANUFACTURING COMPANY

Philadelphia Chicago Kansas City San Francisco

Bluing in the Laundry.

Is bluing a necessity? In the laundry, without the use of bluing, these conditions are essential if the white clothes are to be pure white: Plenty of fresh air, sunshine, a bleaching space (grass), clean, soft water, and time for doing the work.

However, these are the usual conditions: A crowded city, limited air space, no grass, atmosphere full of particles of soot and dust, and, on account of the crowded conditions, the work must be done at stated times or not at all. As a result, even with most careful washing, the white clothes are either gray or yellow.

To overcome this difficulty, bluing is used to give the clothes the desired tint of white. — Maude Propst, Colorado Agricultural College, Fort Collins.

OVER-FATNESS KILLS.

Shortens Life, Spoils Beauty, Brings Discomfort and Worry.

Usually an over-stout person dies from ten to thirty years earlier than one whose weight is retained at normal. Excessive fat causes the victim to become enfeebled and ailing and to die prematurely. The morbid fat gathers within the ribs and hardens, causing fatty degeneration of the heart—danger of sudden death after climbing stairs, shock, running for a train, etc. The double chin which people are apt to regard as merely an annoying defect in beauty, is the sign of a weak throat and voice, and is frequently the forerunner of catarrh, asthma or bronchitis. A big stomach denotes gastric and intestinal troubles. Large hips indicate ailments or weakness of kidneys, liver or other vital organs.

The victim of obesity becomes a sad, ailing, weak, ill-tempered person. The safe, reliable, guaranteed home treatment of Dr. Bradford will speedily effect a cure which will last the entire lifetime, bringing added years, attractive appearance, freedom from pains and discomforts, and real contentment. You can obtain a proof treatment, absolutely free, by writing to Dr. H. C. Bradford, 287 B Bradford Bldg., New York, N. Y. With this, the doctor will mail free a convincing array of testimonials and his book of advice.

It is advised that readers of The National Farmer and Stock Grower who are over-fat, or who have relatives or friends needing a reliable, perfectly safe treatment, take advantage of this unusual opportunity.

MEAD CYCLE CO., Dept. M 270, CHICAGO

Don't Put Paper On Your Pantry Shelves

It's a nuisance and a bother—doesn't look tidy, and quickly tears and soils—dust and grime slip underneath it. It isn't waterproof; every time you wash the wood, you must replace the paper, and you must leave your pots and pans hanging around for half an hour until the wood dries.

Coat Your Shelves With

JAP-A-LAC

Made in 18 Colors and Natural (Clear)

Renews everything from cellar to garret

And Make Them Sanitary and Wholesome and Attractive

Drop in at your local store and order a 20c can of White Jap-a-lac. You need no experience to use it. Any woman can apply it. It brushes readily and flows evenly and dries out quickly, leaving a fine, high, permanent gloss like the glaze on a china plate.

It wears for years without replacing. It won't dis color; you can wash it every day without affecting its finish. A damp cloth will remove any dust or stains.

Do the same thing with the top of your kitchen table and tear off that strip of dingy, smelly oilcloth. The oilcloth costs more than Jap-a-lac, and isn't nearly as good. It won't last one fourth as long, and you know, can't be kept really clean from the moment it begins to crack. Remember there is a different kind of Jap-a-lac for every kind of use.

There's a Jap-a-lac with which you can bring back that new look to your floors. It's as elastic as a coat of rubber. Won't crack or whiten, and keeps its glistening beautiful polish after months of scrubbing.

You simply can't keep house without Jap-a-lac

If you want to know of the hundreds of things for which you can use it send for our FREE Book which tells you ten times as much as this advertisement has room to discuss. When you buy Jap-a-lac, be sure that you get it. Jap-a-lac is a trade marked name. There's only one sort, and it's made by The Glidden Varnish Company. There is no substitute. Write or mail the coupon to-day for the FREE Book telling of the many wonderful things you can do in a few minutes' spare time with a little bit of Jap-a-lac. There is at least one Jap-a-lac dealer in every town. Write to-day to

All Sizes 20c to $3.00

NEW YORK. CHICAGO.

The Egg in Trade.

Recent legislation rendering the egg trade based upon weight rather than count has stirred up quite a commotion in New York City, commission merchants raising all sorts of objections to the new plan. While to one outside it seems like a just reward to those who take pride in furnishing large eggs, some would have us think that the scales which have been tampered with, will find in eggs their choicest prey; that children, accustomed to buying by the dozen, are thwarted by the new plan.

Just why these children cannot learn to adapt themselves to the new ruling as well as they can buy coffee by the pound, instead of stopping to count the berries, does not appear. We only wonder if they are shrewd enough to pick out the biggest eggs when buying under the old way.

But eggs, whether sold by weight or count, are still a lottery, as the consumer has found to her sorrow. Candling helps greatly, yet this process is sometimes abused. The methods of gathering are often lax, and, while there is no intentional fraud, the nestful of eggs found in the haymow may prove stale after they have been marketed; yet the huckster is innocent, and it is then impossible to locate the blame.

If all farmers' families would make it a rule to use the doubtful eggs themselves and sell only those known to be fresh, a stale product on the market would be more rare. One farmer who could not supply the local demand at a summer resort was asked to buy of his neighbors for them. "No, sir," was the prompt reply. "I guarantee every egg I furnish you. I could not do this if I bought from others." The egg which has a guarantee back of it will always command a high price. Let quality stand first, and then make the size as large as possible. Since they must be sold in the original package, eliminate the guesswork, and then strive for equality in weight.—Bessie L. Putnam.

Porch Plants.

Everyone wants some floral decorations for the porch, yet what they shall be is decided not so much by individual taste of the owner as is the location. If it is sunny, the nasturtium and geranium will revel in the warmth; while if shady, quite a different selection should be made.

Those having a south or east exposure may fill the window box with rich earth, using one-third well-rotted fertilizer from the stable in the bottom. Plant in this geraniums, both zonales and foliage varieties. But be sure that the colors harmonize. There are scarlet, and pink, and crimson, each charming in itself, but hideous in a combination. Select the color scheme which pleases, and stick to it. Perhaps on the whole there is none more pleasing than scarlet. The white-edged geranium is a fine trailer to be used for border. Dusty miller also combines beautifully.

A rex begonia makes a beautiful ornament for the porch, and there are numerous other begonias which may be used effectively. Some of these prefer a partial shade.

For a shaded situation there are few summer flowering plants more desirable than fuchsias, which may be had in numerous combinations of color. This plant thrives in a soil so rich that a geranium would die of indigestion. If liquid manure cannot be given it once a week, use as a substitute a tablespoonful of liquid ammonia to a quart of water.

The rubber plant is a stately one for the shaded porch, liking a rich, fibrous soil, plenty of moisure at the roots and a sponging or spraying of the great leaves often enough to keep them free from dust. Avoid injuring the terminal bud. The plant is more comely in shape without the branching, which is sure to follow this maltreatment.—Bessie L. Putnam.

The Fall of the Hen.

For many months past the hen has been among our most influential citizens. Men have flourished in affluency, or languished in poverty, according as she favored or slighted them. She even occupied the spotlight in the theater. Men wrote poems and dramas about her, and fair women dressed in her clothes, spoke in her cackle, and strutted her strut before wildly enthusiastic audiences.

But the hen has fallen. Prices of eggs away off—19 cents a dozen for fresh ones in Chicago the other day. The man with a yard full of hens no longer holds his head higher than the banker and the professional man. But there's a day after to-day.

The hen will rise again. They can't flood the market with cold-storage eggs forever. Nor will the foolish hen work overtime indefinitely.

In the meantime, the fortunate owner of a prosperous henyard can eat boiled eggs, fresh eggs, poached eggs, and, within reasonable limits, fried chicken, whenever he blamed pleases—which some folks cannot. The hen is still a good bet,—Toledo News Bee.

Teaching Pluck.

When baby tumbles down it is readily seen whether or not any serious injury is received. If there is the wise provision in advance against a bump upon the stove or some equally hard object and a protecting rug or carpet softens the fall, it is well to treat the accident as a joke. Laugh heartily and baby will soon join you. Perhaps next time it will be the first to see the funny side of the matter.

There are enough tears shed over serious bumps, and the child who learns early not to waste time crying over the little ones, not to expect mamma to come and gather it into her arms and pet it, but to bravely rise to its feet and try again, is developing the spirit which we call pluck. Next time it will balance itself with a surer poise; it will look out for the object which tripped it before; it will learn that this is a place where one must watch for himself where he is going; and the fun of jumping up and trying over again until it can go unaided is a game hugely enjoyed, with a bit of mamma's help and encouragement.—Bessie L. Putnam.

No. 6887.—Girl's Dress. Four, six and eight years. 3½ yards of material 27 inches wide, 2½ yards 36, 2 yards 44, for six-year size. The price of each pattern is 10 cents.

Please be sure to give the size of pattern ordered and write your own name and address plainly, that no mistake can be made to cause delay.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Bees Before Prayers.

An Episcopal missionary in Wyoming visited one of the outlying districts in his territory for the purpose of conducting prayer in the home of a large family not conspicuous for its piety. He made known his intentions to the woman of the house, and she murmured vaguely that she would "go out and see." She was long in returning, and, after a tiresome wait, the missionary went to the door and called, with some impatience:

"Aren't you coming in? Don't you care anything about your souls?"

"Souls!" yelled the head of the family from the orchard. "We haven't got time to fool with our souls when the bees are swarmin'."—Lippincott's.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is safe and sure cure for Leucorrhœa or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors, or Growths; also pains in head, back and bowels, bearing down feelings, nervousness, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that, it will cost you nothing to give the treatment a complete trial; and if you wish to continue, it will cost you only about 12 cents a week or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhœa, Green Sickness and Painful or Irregular Menstruation in young Ladies, Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write to-day, as you may not see this offer again. Address

The Farm Laborer's Loss.

"Well, George," exclaimed the English farmer as he greeted one of his laborers on New Year's Day, "and 'ow did 'ee get on last year?" "Ay, maister," was the reply, "t wur a bad year for I. I did lose my missus, I did lose my canary, and I did lose my dog. And it wur a good dog, too."—Farmer's Guide.

Popcorn is selling on the cob at St. Louis at $1.25 to $1.75 per 100 pounds.

Burbank's Crimson Winter Rhubarb.

A premium worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks. A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge

Burbank's Crimson Winter Rhubarb.

the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower. THIS IS A DOLLAR PROPOSITION. Send us One Dollar for two single one-year subscriptions to The National Farmer and Stock Grower, or for your own two-year subscription, and we will send by mail, prepaid, one copy of a booklet entitled "Rhubarb For Profit," and Six Roots of Burbank's Crimson Winter Rhubarb. Send your dollar quickly and the book and plants will be mailed you from Pasadena, California, where they are grown. This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish valuable premiums. This advertisement will not appear again. HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down, and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number. The price of each pattern is 10 cents.

For a Blouse or Gown.

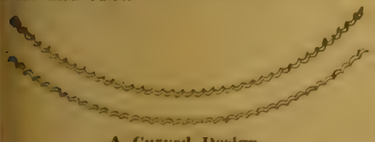
No. 570.—This is a suitable design for beading or embroidering a blouse or gown. Patterns for the front or sleeves are given.

For a Blouse or Gown.

No. 567.—This is a strictly original and striking design for embroidering or beading a blouse or gown.

Especial Blouse Design.

No. 562.—A very becoming blouse front design of chrysanthemums, suitable for beading or embroidery. The pattern includes collar and cuffs.



A Curved Design.

No. 571.—This is a simple curved design for scallops used for many purposes. Two and a half yards of each curve are given.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Rare Chance and a Remarkable Offer!

EIGHT STANDARD TWO-YEAR-OLD GRAPEVINES, THE LADIES' WORLD FOR ONE YEAR, THE NATIONAL FARMER AND STOCK GROWER FOR ONE YEAR.

This Grand Combination To You For Only $1.00.

This is a subscription offer. A live one for people who appreciate a good thing. It appeals to all who own or rent a small piece of ground. All people can have good literature all the year round and grapes in season. Just read this.

THE LADIES' WORLD is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. It is fully equal in value to any monthly family publication.

THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, and especially so to cattle, hog and sheep raisers, dairymen, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page.

EIGHT STANDARD TWO-YEAR-OLD GRAPEVINES. These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of:

NO. 1. MOORE'S EARLY—Black, bunch not quite as large as Concord; berry larger and very much like it in flavor and quality. Vine a moderate grower. Produces a fair, and with high cultivation a heavy crop. Ripens early. Succeeds best on rich soil.

NO. 2. CATAWBA—Dark red when fully ripe. Bunch large, moderately compact; berries medium to large; skin thick; flesh of rich, vinous flavor. Vine a good grower, hardy, very productive. Ripens late.

NO. 3. DIAMOND—White. Bunch large, compact; berries large, round. Vine a good grower, with thick, heavy foliage; hardy and productive; of fine quality. Ripens a little before Concord.

NO. 4. CONCORD—Black; early. Decidedly the most popular grape in America, and deservedly so. Bunch large, compact; berries large, covered with a rich bloom; flesh juicy, sweet, tender; vine a strong grower. For general cultivation the most reliable variety.

NO. 5. AGAWAM—Red or maroon. Bunch loose, berries large; flesh juicy, of a rich, peculiar, aromatic flavor; ripens about with Concord; vine strong, hardy and productive.

NO. 6. NIAGARA—White. Bunch very large and handsome; berries large, round; skin thin, tough, does not crack; melting, sweet, with a flavor and aroma peculiarly its own; ripens with Concord, sometimes a little earlier. Vine productive.

NO. 7. DELAWARE—Red. Bunch small, compact; berries small; skin thin but firm; flesh very sweet and refreshing; ripens with Concord or a little before. Vine hardy, productive; requires rich soil and good culture.

NO. 8. WORDEN—Black. Bunch very large, skin thin. Superior to the Concord in the following points: It is better in quality, has a larger berry, a more compact and handsome cluster and ripens five or ten days earlier. It fully equals the Concord in vigor, health and productiveness.

OUR PROPOSITION.

Send us **One Dollar** and we will send you **THE LADIES' WORLD** for one year; **THE NATIONAL FARMER AND STOCK GROWER** for one year, and we will send you by mail, securely packed, postage paid, safe delivery guaranteed, the **EIGHT TWO-YEAR-OLD GRAPEVINES.** Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The reward of hard work and valuable time at dress-making should be an enduring gown.

Simpson-Eddystone Silver Grey Prints

are durable tub proof calicoes that stand the rub because of their well-woven cotton cloth and deeply-dyed fast color. Their tasteful designs add to the value of these prints that have been the standard since 1842.

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philad'a

Founded 1842 by Wm. Simpson Sr.

Reading a Paper.

We were visiting at Aunt Sarah's, and as she was clearing off the sitting-room table, she called to Uncle Eph: "You've finished reading this last week's farm paper, ain't you?" And he replied in his quaint drawl: "No, I ain't. I got all the advertising to read yet."

That answer of Uncle Eph's served to enlighten me on a subject over which I had been pondering. Although Uncle Eph seems rather slow in most respects and has not a very quick grasp on new ideas, his farm and household equipment is up-to-date, and many a labor-saving device helps Aunt Sarah and himself to make light work of duties that otherwise would take much time and strength to perform. He reads his farm paper and with him reading means absorbing everything from cover to cover, including the ads. He has faith in his paper, and when it tells him of a good thing he investigates.

Uncle Eph, being of a slow mind, is conservative and always looks carefully before he leaps; consequently he usually lands right side up on good, solid ground. So after reading something that sounds good to him, he looks it up and seldom is he disappointed, for the reliable paper of to-day advertises in the interests of its readers as well as for the advertiser. Uncle Eph sends postals hither and thither in response to advertisements, and the catalogues and circulars he has on hand make a small library in themselves. But it is a part of Uncle Eph's business to keep in touch with improvements in farm machinery, new varieties of seed, improved strains of live stock, and comforts of the farm home, just as it is the aim of any other business man to be ever on the lookout for helps that will give him readier facilities for turning out work. So Uncle Eph considers it important that he come in touch with the men who are making a business of furnishing farm improvements. In Uncle Eph's own words: "It never hurts you none to send them a postal card, and no one can make you buy if you don't want to, and every once in a while you come across something that you've been needing powerful bad for years, and like as not you never even knew you needed it."—Janet Thomas Van Osdel.

Garden Notes.

The garden enthusiast is uneasy unless he can be doing things at the earliest possible moment. If a neighbor is getting his seeds in, the thought of being behind time oppresses him. But remember that there is no time gained in most planting if the ground is not in suitable condition.

Location and character of the soil may hasten or retard the proper planting for a week or more. A southern slope and a light, well-drained soil are ready some time before the stiff clay. And in trying to expedite matters with the latter time is lost and an injury done to the soil which will linger through the season.

If the ground is not dry enough to crumble at the touch it will take an immense amount of tillage to free it from lumps, and until they are removed small plantlets cannot thrive well. One may force nature along certain lines, but there is loss rather than gain in trying to hurry her in this.

True, a bed may be spaded up on one side of the garden for a few early onions, lettuce, radishes and peas, which will stand the late frosts and are not so fastidious if the ground is not in first-class shape. Still, they do not make the robust growth of the later planting, which is done right, and only as they extend the season of fresh vegetables can they be said to prove of profit.

Crop rotation is as necessary in the garden as in the field. If one corner has produced fine cucumbers, the tendency is to replant in the same spot. Yet while the garden is heavily fertilized each year, each species of plant makes a special drain upon certain chemical constituents of the soil, and a perfect balance can be more easily retained by shifting the different varieties from year to year.

If there are striking characteristics in different parts of the plot it may be well to consider them, yet the shifting about should not be lost sight of. Thus, if you have one especially warm sunny spot from which you are wont to gather early tomatoes a week earlier than your neighbors, and feel certain that to this special location the extreme earliness is due, remember that melons will also respond to rich soil and sunshine, and that by exchanging with them you will secure favorable soil for both and at the same time give the elements in each plot excessively drained by previous occupancy a chance to be replaced.

Different varieties of the same vegetable planted side by side are prone to "mix," and in this cross-breeding the result is usually, save under scientific direction, of less value than either parent. For this reason, if for no other, it is best to secure fresh seed from a reliable grower frequently in order to keep the stock pure.

Some find it cheaper to buy celery plants than to fuss with raising them. And where they are easily secured at planting time and the desired sorts are assured, this is in many instances preferable. The plants are slow in germination, and in the earlier stages of growth must be carefully handled. A quart berry box is convenient for starting seedlings, and when they attain the second leaf they can be transplanted into small pots, boxes of paper, or egg shells packed firmly side by side in a larger box. Then when the time comes for transplanting this can be done by tearing off the improvised receptacle wthout disturbing the roots.

TAKE a look at the picture above. Notice the prosperous farmer who has just returned from town after dark.

He is in the act of lighting up his barn and the space in front with same light his family is using in the house.

This he does without a match of any kind.

He simply walks up and pulls a little short chain, and presto, he has it—a flood of beautiful, white Acetylene Light.

If you have ever lived on a farm you will appreciate the advantages, the comfort and the satisfaction of a barn light that can be turned on without a match.

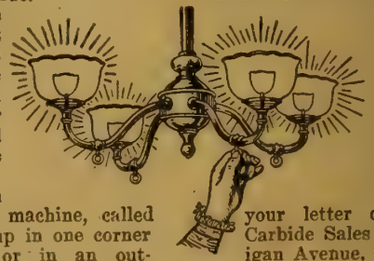
You can probably recall many a cold winter night when you came home numb with the cold, and with fingers all thumbs tried to unbutton two coats to find a match, which you tried to scratch on a damp board. After which you probably fought a few rounds with a smoky lightning-bug lantern, and put in an hour doing chores, that you could have done in half the time with such a light as the one shown in the picture.

* * *

In many cases farmers have a light put on the back porch where it can be instantly turned on to illuminate the yard, and a light in the cow barn to make milking easy, as well as one inside and one in front of the horse barn.

All these lights come in mighty handy, too, when there is trouble among the stock, or a sick animal to take care of through the night.

These barn and out-building lights are of course enclosed in solid globes, and can be fastened anywhere they are wanted—in front of the stalls, in the harness room, to the barn ceiling, to a post, or the top of any door, inside or outside.



It may surprise you to know that just such lighting plants as the one we have illustrated have been installed in over 185,000 farm and country homes in the United States.

In every case an automatic tank-like machine, called a generator, is set up in one corner of the basement, or in an out-building, and from this machine the Acetylene which makes the light is carried through common gas pipes to handsome chandeliers in every room in the house and to other lights located all over the place.

That's all there is to an Acetylene Light Plant. Just the generator, the pipes, and the fixtures.

Such a plant can be set up in from two to four days by any man who can cut and fit pipe, and without inconveniencing the family, or injuring walls or carpets.

* * *

As a matter of fact, enclosed Acetylene Burners, permanently fixed to walls, ceilings and posts and equipped to light by the pull of a chain without matches, are the safest lights ever installed on a farm.

Most fires on farms are caused by the careless handling of lanterns and matches by hired help.

Consequently, any scheme of lighting that can be operated without matches, lanterns or lamps reduces the risk of fire to the minimum.

And that is why the engineers of the National Board of Fire Underwriters have declared Acetylene Light to be much safer than the tip-over lights it is so rapidly displacing.

Add to these features of safety the fact that the light, volume considered, costs less than Kerosene.

And the fact that it is made from UNION CARBIDE, a form of crushed stone that will not burn and is as easily stored as brick.

And the fact that you, yourself, can in 20 minutes make all the Acetylene you need to light your place one month.

* * *

Sum all these facts up and you will see that this light is a convenience YOU WANT and that you should write to us today for estimate as to the cost of this wonderful rural gas light for your own farm.

We will gladly send figures and very interesting illustrated booklets, free. Just tell us where your place is located, give us an idea of its size, and address your letter or postal to Union Carbide Sales Company, 157 Michigan Avenue, Chicago, Ill., Department I. —— 56.

Gradually accustom the young plants to fresh air and keep them in a place not so warm, that they will become spindling. An occasional draught of weak liquid manure may aid in securing robust growth; but this must be applied with care, for the young plants are easily overfed, a condition quite as injurious to plant as to animal life.—Bessie L. Putnam.

The Louisiana Boy's Corn.

Stephen G. Henry, a seventeen-year-old boy, of Melrose, Natchitoches Parish, Louisiana, won first prize in Boys' Classes at the National Corn Show held at Columbus, Ohio, a few weeks ago, in competition with more than forty-six thousand boys, for the best all-round record as to yield, report of profits, quality of corn and essays on corn growing. He cultivated nine acres, and made 138 bushels on less than one acre at a cost of 13½ cents per bushel. During the past season young Henry also won first prize at Natchitoches Parish Fair, a gold watch offered by Governor J. Y. Sanders, and several premiums at the Louisiana State Fair at Shreveport. In addition, he won a trip to Washington, and in an address on corn growing before the Committee on Agriculture of the House of Representatives attracted much favorable comment.

SELECTED POETRY.

THE BIVOUAC OF THE DEAD.

The muffled drum's sad roll has beat
The soldier's last tattoo;
No more on Life's parade shall meet
That brave and fallen few.
On Fame's eternal camping ground
Their silent tents are spread
And Glory guards with solemn round
The bivouac of the dead.

No rumor of the foe's advance
Now swells upon the wind;
No troubled thought at midnight haunts
Of loved ones left behind;
No vision of the morrow's strife
The warrior's dream alarms;
No braying horn or screaming fife
At dawn shall call to arms.

Their shivered swords are red with rust,
Their plumed heads are bowed;
Their haughty banner, trailed in dust,
Is now their martial shroud;
And plenteous funeral tears have washed
The red stains from each brow,
And the proud forms, by battle gashed,
Are free from anguish now.

The neighing troop, the flashing blade,
The bugle's stirring blast,
The charge, the dreadful cannonade,
The din and shout, are past—
Nor war's wild note nor glory's peal
Shall thrill with fierce delight
Those breasts that nevermore may feel
The rapture of the fight.

Like the fierce Northern hurricane
That sweeps his great plateau,
Flushed with triumph yet to gain,
Came down the serried foe.
Who heard the thunder of the fray
Break o'er the field beneath,
Knew well the watchword of that day
Was "Victory or death."

Long has the doubtful conflict raged
O'er all that stricken plain,
For never fiercer fight had waged
The vengeful blood of Spain;
And still the storm of battle blew,
Still swelled the gory tide;
Not long, our stout chieftain knew,
Such odds his strength could bide.

'Twas in that hour his stern command
Called to a martyr's grave
The flower of his beloved land,
The nation's flag to save.
By rivers of their father's gore
His first-born laurels grew,
And well he deemed the sons would pour
Their lives for glory, too.

Full many a Norther's breath had swept
O'er Angostura's plain—
And long the pitying sky has wept
Above the mouldering slain.
The raven's scream, or eagle's flight,
Or shepherd's pensive lay,
Alone awakes each sullen height
That frowned o'er that dread fray.

Sons of the Dark and Bloody ground,
Ye must not slumber there,
Where stranger steps and tongues resound
Along the heedless air;
Your own proud land's heroic soil
Shall be your fitter grave;
She claims from war his richest spoil—
The ashes of her brave.

So 'neath their parent turf they rest,
Far from the gory field,
Borne to a Spartan mother's breast,
On many a bloody shield;
The sunshine of their native sky
Smiles sadly on them here,
And kindred eyes and hearts watch by
The heroes' sepulchre.

Rest on, embalmed and sainted dead,
Dear as the blood ye gave;
No impious footstep here shall tread
The herbage of your grave;
Nor shall your glory be forgot
While Fame her record keeps
Or Honor points the hallowed spot
Where Victory proudly sleeps.

Yon marble minstel's voiceless stone
In deathless song shall tell,
When many a vanished age hath flown,
The story how ye fell;
Nor wreck, nor change, nor winter's blight,
Nor Time's remorseless doom,
Shall dim one ray of glory's light
That gilds your deathless tomb.
—Thomas O'Hara.

OUR BUTCHER HASN'T HEARD OF IT.

They say that tenderloin is down
A point or so, and yesterday
That pork was selling in the town
For half of what we used to pay.
The corn crop's doing it, they say,
And every time there's word of it
The price of something gives away—
But our butcher hasn't heard of it.

They say that turkey's not so high
As it was sold a year ago,
And almost anything you buy
To eat is down a point or so—
That bacon, even, is so low
That all the things averred of it
Are such that anyone may know—
But our butcher hasn't heard of it.

Our butcher has not been advised
Of any such phenomenon,
And what was ever highly prized
He still contrives to dote upon—
Or whatsoever goeth on,
Or is, perhaps, inferred of it,
Or peradventure is begone—
Our butcher hasn't heard of it.
—Clark McAdams, in Post-Dispatch.

FARMER JOHN.

Home from his journey Farmer John
Arrived this morning, safe and sound,
His black coat off, and his old clothes on,
"Now I'm myself," says Farmer John;
And he thinks: "I'll look around."
Up leaps the dog. "Get down, you pup!
Are you so glad you would eat me up?"
The horses prick their ears to meet him;
"Well, well, old Bay!
Ha, ha, old Gray!
Do you get feed when I'm away?

"You haven't a rib," says Farmer John;
"The cattle are looking round and sleek;
The colt is going to be a man,
And a beauty, too; how he has grown!
We'll wean the calf next week."
Says Farmer John: "When I've been off
To call you again about the trough,
And watch you, and pet you, while you drink,
Is a greater comfort than you can think!"
And he pats old Bay,
And he slaps old Gray—
"Ah, this is the comfort of going away!

"For, after all," says Farmer John,
"The best of a journey is getting home;
I've seen great sights—but would I give
This spot, and the peaceful life I live,
For all their Paris and Rome?
These hills for the city's stifled air,
And big hotels, all bustle and glare,
Land all houses, and roads all stones,
That deafen your ears and batter your bones?
Would you, old Bay?
Would you, old Gray?
That's what one gets by going away!

"There money is king," says Farmer John,
"And fashion is queen; and it's mighty queer
To see how sometimes, while the man
Is raking and scraping all he can,
The wife spends every year
Enough, you would think, for a score of wives
To keep them in luxury all their lives!
The town is a perfect Babylon
To a quiet chap," says Farmer John,
"You see, old Bay,
You see, old Gray,
I'm wiser than when I went away.

"I've found out this," says Farmer John—
"That happiness is not bought and sold,
And clutched in a life of waste and hurry,
In nights of pleasure and days of worry;
And wealth isn't all in gold,
Mortgage and stock and ten per cent.—
But in simple ways and sweet content,
Few wants, pure hopes, and noble ends,
Some land to till, and a few good friends,
Like you, old Bay,
And you, old Gray,
That's what I've learned by going away."

And a happy man is Farmer John—
Oh, a rich and happy man is he!
He sees the peas and pumpkins growing,
The corn in tassel, the buckwheat blowing,
And fruit on vine and tree;
The large, kind oxen look their thanks
As he rubs their foreheads and strokes their flanks;
The doves light round him, and strut and coo;
Says Farmer John: "I'll take you, too—
And you, old Bay,
And you, old Gray,
Next time I travel so far away."
—J. T. Trowbridge.

IS IT WORTH WHILE?

Is it worth while that we jostle a brother,
Bearing his load on the rough road of life?
Is it worth while that we jeer at each other,
In blackness of heart—that we war to the knife?
God pity us all in our pitiful strife!

God pity us all as we jostle each other!
God pardon us all for the triumphs we feel
When a fellow goes down; poor, heart-broken brother,
Pierced to the heart—words are keener than steel,
And mightier far for woe or for weal.

Were it not well in this brief little journey,
On over the isthmus, down into the tide,
We give him a fish instead of a serpent,
Ere folding the hands to be and abide,
For ever and aye, in dust at his side?

Look at the roses saluting each other;
Look at the herds all at peace on the plain,
Man, and man only, makes war on his brother
And dotes in his heart on his peril and pain,
Shamed by the brutes that go down on the plain.

Is it worth while that we battle to humble
Some poor fellow-traveler down into the dust?
God pity us all! Time too soon will us tumble,
All men together, like leaves in a gust;
All of us humbled down into the dust.
—Joaquin Miller.

INTO THE FOREVER.

What may we take into the vast forever?
That marble door
Admits no fruit of all our long endeavor,
No fawn-wreathed crown we wore,
No garnered lore.

What can we bear beyond the unknown portal?
No gold, no gains
Of all our toiling; in the life immortal
No hoarded wealth remains,
Nor guilt, nor stains.

Naked from out the far abyss behind us
We entered here;
No word came with our coming to remind us
What wondrous world was near.
No hope, no fear.

Into the silent, starless night before us,
Naked we glide.
No hand has mapped the constellations o'er us,
No comrade at our side,
No chart, no guide.

Yet fearless toward that midnight black and hollow,
Our footsteps fare;
The beckoning of a Father's hand we follow—
His love alone is there;
No curse, no care.
—E. B. Sill, in Globe-Democrat.

Uneeda Biscuit
In Select Company
It's the very nature of a soda cracker to absorb moisture and foreign odors.
That's why the ordinary soda cracker remained so long in obscurity.
The advent of Uneeda Biscuit and the moisture-proof and odor-repelling package changed all this—for Uneeda Biscuit, the perfect soda cracker, keeps select company—its own.
To-day the goodness, the freshness and body-building virtues of Uneeda Biscuit are acclaimed in tenement and mansion.
Never Sold in Bulk

SPEEDING THE TRAIN.

There was a cow on the track. The shoe drummer, who had been cutting cards for the cigars, beckoned the porter.

"Boy, is that cow still on the track?"

"Yes, sah."

"How fast is the train moving?"

"'Bout fo' miles an houah while de cow am on de track."

"And how fast is the cow moving?"

"'Bout five miles an houah, sah."

"Well, here is a quarter. Take a few yards of rope up to the engineer and tell him to hitch the train to the cow. We might make better time."

Rubber Roofing

Warranted For Twenty-Five Years.
FREIGHT PAID To Any Station East of Rocky Mountains, except Texas, Colorado, New Mexico, N. Dakota, S. Dakota, Wyoming, Montana. Special prices to these states on request.

ONE-PLY - - - - Weighs 35 lbs., 108 Square Feet, $1.10 per roll.

Well, Folks, How Do You Like My Size? Just Look Me Over Carefully, and Remember That I Am A

Merry War Lye Hog

Healthy, Happy, Fat and Sleek

Was I Always In Prime Condition Like This? Well, I Should Say Not! Only a Couple of Months Ago I Was "Off My Feed", and Went Slinking 'Round the Lot With a Lack-Luster Stare In My Eyes, Losing Weight Daily and Taking Mighty Little Interest In Life. Things Began To Look Pretty Serious and I Could Almost See a Soap-Kettle "Finish" for Yours Truly, When My Owner Ran Across a Few Cans of This "Merry War" Lye. He Mixed Some of It With My Feed and

It Surely Saved My Life!

Right From the Very First Sip of Swill, "Merry War" Began To Tone Me Up. My Appetite Improved, and In a Few Days I Was Feeling Strong and Healthy, Taking On Firm Flesh and Juicy Fat Every Day. I Now Take "Merry War" Lye With All My Meals, and Know That I Am Safe From Worms, Cholera and All Those Pesky Hog Troubles.

Don't Lose A Single Hog!

With hogs bringing around $10.00 you can't afford to lose a single head from Cholera, Worms or other hog troubles. And there is no reason why you should, either, Mr. Farmer! With the aid of MERRY WAR LYE you can readily keep your drove in a perfectly healthy condition and render them immune from contagious diseases. Before MERRY WAR LYE was discovered, you used to hear it said: "Oh, Cholera is incurable," "You can't prevent your hogs coming down with Cholera," etc., etc., but now millions of Farmers and Hog Raisers know differently. For they have been convinced by the testimony of others or by their own actual experience that a little MERRY WAR LYE fed with the swill every day will surely keep hogs in a perfectly healthy condition, increase their weight and render them immune to all contagious diseases.

Merry War Lye Not An Expense

MERRY WAR LYE is not an expense. It is an investment that yields an actual profit, because it not only prevents hog losses from Cholera, Worms, etc., but also puts on many pounds of additional flesh and fat. So the best thing you can possibly do to insure your pork profits is to feed MERRY WAR LYE every day, just as regularly as you feed the ordinary ration of swill or dry feed. The price of MERRY WAR LYE is so small you will hardly notice it, yet a fair trial will convince you that it is absolutely the safest and surest protection against hog troubles ever discovered. Just read the testimonials below (only a very few of hundreds received) and you will see how MERRY WAR LYE is regarded by Farmers and Hog Raisers who have used it in many different sections of the country.

Follow Directions Carefully

MERRY WAR LYE comes in powdered form put up in cans with the convenient turning top covers It should be fed as follows: Mix one (1) tablespoonful MERRY WAR LYE with slop for ten (10) hogs, or one-half (½) can with barrel of swill. Stir well and feed night and morning. If your hogs are on a dry feed ration, mix one-half (½) can MERRY WAR LYE to each barrel of drinking water. The best insurance in the world against hog losses is to feed MERRY WAR LYE daily. It cleanses the system, tones the digestive organs, puts sick hogs in fine shape, and makes them absolutely immune to all contagious diseases. Thousands of Hog Raisers have proved by actual experience that MERRY WAR LYE both prevents and cures all hog troubles. You simply can't afford to be without it! Call on your dealer today.

"Merry War" Lye Insures Hog Health

Kills Worms—Prevents Cholera—Adds Weight

Mr. H. G. Acker, Chickasha, Okla., writes: "I have been feeding MERRY WAR LYE some two months, and it expelled worms from my hogs after the first few feeds. My hogs are apparently well and look fine. Their hair has a good, glossy color; they have good appetites. One of my neighbors, an extensive hog raiser, has recently used your MERRY WAR LYE, upon my recommendation, with good results."

Mr. J. W. Fountain, Bowling Green, Mo., writes: "I have found good results in feeding MERRY WAR LYE with tankage. It is fine."

Mr. B. S. Row, Gracemont, Okla., writes: "I had my groceryman order a case of MERRY WAR LYE for me. I have fed it to my hogs and have had good results. Also advised other hog raisers and they have fed it with marked results. It is a sure worm killer."

Mrs. Verna Thixton, Fortuna, Mo., writes: "We never had any sick hogs since using MERRY WAR LYE."

Mr. A. W. Davis, Hamlin, Iowa, writes: "I haven't had time to test MERRY WAR LYE much, but what I have is highly satisfactory. My hogs, over 100 head, are looking fine. MERRY WAR LYE is the stuff to cure cough and thumps and put hogs in a thrifty condition and I will never be without it while I raise hogs."

Mr. Adam Schultz, McLouth, Kansas, writes: "I have given MERRY WAR LYE a good trial, and it has made a marked improvement in my herd. Before I began feeding the lye I did not have any sick hogs, but they did not eat as they should when they are doing as they ought to, and they looked rough and their hair was rough and sometimes some of them would not eat at all, and some would eat a little and then go off and lay down; but after I had fed MERRY WAR LYE about eight or ten days, I could see a marked improvement in my herd. They began to all come out at meal time and take a hold as they should to eat. They jump and play as they did not do before. I fed MERRY WAR LYE, and they now look sleek and thrifty. I only fed nine cans to about 66 head, and they are every one doing fine. I consider MERRY WAR LYE the best remedy I have ever used, and the cheapest. I have spent a good deal of money at times, but I never got the results from any of the so-called Hog Cholera and Worm Cure remedies as I have from MERRY WAR LYE. My son got one-half of the two dozen cans and he has fed all of his to about 60 head and they are doing fine now."

Mr. Parley C. Crolley, Patrick, S. C., writes: "Accept my heartiest appreciation of your MERRY WAR LYE, as it is making my hogs look like new hogs."

Mrs. B., Aholt, Mo., writes: "I cooked potatoes, turnips, or any kind of refuse, such as cabbage and other roots; seasoned it, then turned it into barrels; put one can of MERRY WAR LYE in two barrels of the cooked food, which I thickened with shipstuff and fed twice a day. It surely prevented our hogs from getting the cholera, while our neighbors lost all of theirs."

Mr. H. F. Gustoff, Coon Rapids, Iowa, writes: "MERRY WAR LYE is the best destroyer of worms in hogs I ever used. It is all right."

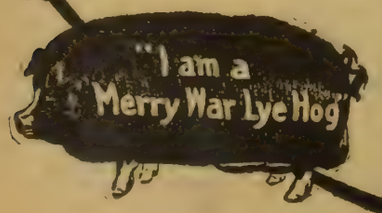
Mr. Alvin Trueblood, Salem, Iowa, writes: "I am well pleased with what I have fed of MERRY WAR LYE. It is the best thing I ever fed hogs."

Mrs. T. Akins, Hoxie, Ark., writes: "MERRY WAR LYE is all the LYE that we use. Before we began using it we had a lot of hogs with Cholera. We used MERRY WAR LYE and it cured our hogs."

Mr. Felix Davis, Gold Dust, Tenn., writes: "MERRY WAR LYE is O. K., for I use it on my own stock."

C. R. McClure, Bonesteel, S. D., writes: "As I have been using MERRY WAR LYE this summer, I thought you would like to hear of the success I have had with it. We have not a runt in our pens this fall; used MERRY WAR LYE in drinking water. We gave MERRY WAR LYE to our fattening hogs and they fattened much quicker than when we fed no MERRY WAR LYE. I recommend it highly."

Ask Your Dealer For Merry War Lye



Ask your dealer for MERRY WAR LYE—and INSIST on getting it! There are OTHER brands of lye put up for certain household uses, but only one—MERRY WAR—is absolutely SAFE and specially prepared for PREVENTING and CURING cholera, worms and all hog diseases.

So, if your dealer can't supply you, write us and we will give you the name of one who can; and will also send you a valuable book on "HOW TO GET THE BIGGEST PROFITS FROM HOG RAISING." Send for this book today.

MERRY WAR POWDERED LYE comes in 10c cans, or 24 for $2.00, at Grocers' or Druggists'. There are no substitutes for MERRY WAR LYE!

5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over

the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Model Orchards and Experimental Orchards.

Many people confound the terms "model" and "experimental." Experimental farms used to be thought of as model farms, and it took a great many years to get people to understand that there is a wide difference between having a model anything and an experiment. So it is with experimental and model orchards.

An experimental orchard is one in which an experiment is carried on. Often it is to find out something about the action of trees under certain conditions. Trees have been planted purposely too close together to give data to prove the injury of close planting. Of course, an orchard so handled will not give a profit, yet we not infrequently hear such experiments criticised because a profit was not shown.

But the model orchard should produce a profit, for it is to be a model of how an orchard should be planted and taken care of. It is probable that we are to have model orchards in all parts of the country.

The Department of Agriculture of the state of Pennsylvania has begun the establishment of model orchards in all parts of that state. Not only are the orchards being planted and cared for as orchards should be, but they are being used for demonstration orchards. In each orchard is demonstrated the best methods for preventing insect pests and the best methods for destroying them when they have gained access to an orchard.

Such demonstrations contain value as object lessons far beyond the written-about demonstration. The trees become living witnesses as to what scientific handling of trees can accomplish. It would be well if we could have a model orchard in every county, in which actual handling would show what there is in an orchard in a certain locality and what is not in it. It is frequently as important to find out what cannot be successfully done as to find out what can be done.

Few of the privately-owned orchards are handled in a way to serve for models. Very few of them, indeed, are even well handled. Most of them get a one-sided treatment from year to year, being owned by men that ride hobbies. The real model orchard must be handled by men that realize the benefit of giving an orchard an all-around treatment.

The difference between a model orchard and an experimental orchard came forcibly to the attention of the writer some years ago. A large orchard was being successfully handled on a leachy soil, deficient in humus. The writer asked the manager of the orchard why he did not plow under some leguminous crop to get air-nitrogen and more humus. The manager replied that the men that owned the orchard were interested in a certain fertilizer and did not want the other method tried. So really the orchard was being experimented with to show what it would do on a certain kind of fertilizer. But most people did not know that and thought of it as a model orchard. As a model orchard it was not as successful as it should have been, for the best things were not done for it.

We need model orchards all over the country to stimulate the orchard business. It is the easiest way to get into the minds of the people the great truths the investigators have been bringing to light during the past twenty years. Such orchards can be made "living epistles seen and read of all men."

Marketing the Grain Crops.

The Chicago Drovers' Journal says: "More ignorance exists in regard to the grain trade and the Grain Exchanges than any other line of business. This is shown in the statement made by some of the legislators at Springfield and at Washington. Whenever the trade wants any legislation, which is seldom, its motives are impugned, and it is looked upon as a move to help gambling. Grain Exchanges have a function to perform and do it in good shape. Where would the producer and the consumer get off, were it not for the facilities afforded by Grain Exchanges in marketing of the world's immense cereal crops each year? What would become of the farmer in an effort to market 20 per cent. of a 3,100,000,000-bushel corn crop, or a 620,000,000-bushel or a 650,000,000-bushel wheat crop? The world's wheat crop runs close to 4,000,000,000 bushels a year. How could it be marketed in good shape without commercial regulations which can only exist through operations of a commercial exchange? They bring buyers and sellers together from all parts of the world, so that they can exchange views and agree on terms.

"A large percentage of the world's crops are marketed through sales for future delivery. In other words, foreigners buy wheat and corn in December for shipment during February, March, and throughout the six to eight months. The ability to contract for future delivery is a great benefit to the producer and consumer. These facts are not fully understood and never have been, and a great many people do not care to understand. The speculative element in the trade at times is susceptible of abuses, like all other lines, but the percentage of abuse is not large, compared with the actual legitimate business. It is carried to excesses in periods of short crops, but is a great help in years of a large production.

"It is well to know that every bushel of wheat that is sold short must be bought back some time, and its purchase creates a buying power which acts as a sustaining factor to values. Without this buying at times there would be grain panics, the magnitude of which would bankrupt many farmers and merchants."

Save Your Thresh Bill

IT'S UP TO YOU to say what thresher will thresh your grain this season. It's your grain. You worked hard to grow and harvest it. You pay your thresh bill. You cannot afford to hire an outfit that will waste your grain.

You have worked hard for a profit and you should have it. You cannot afford to divide it with the straw pile. Your good business judgment tells you so.

Every bushel that goes into your straw pile is money right out of your pocket.

You can save the amount of your thresh bill by hiring a Red River Special to do your threshing. It will save more grain for you. It will waste less of your time. It will do your job quicker. It will clean your grain better. It will pay you.

It is the only thresher made which uses the only true and sure method of separation. It beats the grain out of the straw just like you would do with a fork.

The Big Cylinder, the "Man Behind the Gun" and the shakers which toss the straw up and **beat it** like you do with a pitchfork save all the grain for you whether it be wheat, oats, rye, barley, peas, rice, alfalfa, timothy, or any other grass seed.

I. J. Knudson, farmer of McHenry County, North Dakota, writes: "During the summer of 1908 I bought a Red River Special threshing outfit. On August 23rd, 1908 I started this outfit near a stack of old straw that had been threshed in 1907 by a ———— separator, and to stretch the belts on the new machine, ran a small load of straw from this stack through the new machine and got over 16 bushels of oats. I afterwards threshed out the balance of this stack and got 347 bushels of grain."

Have your threshing done this year with a Red River Special.

Insist upon it and your straw pile will not be like this one.

It will **save your thresh bill. Full particulars furnished if asked for.**

We can send you the testimony of hundreds of other farmers.

Ohio Farming Statistics.

The Census Bureau reports that Ohio has 271,383 farms, averaging 89 acres per farm. The total acreage is 24,074,000, and 19,210,000 acres are improved. The average value per acre, including buildings, is $68.57, and without buildings $53.33. There are 191,660 farms conducted by the owners thereof, and 136,735 of them are free and clear of debt. Tenants conduct 77,040 farms, and 2,683 are in the hands of managers. There are only 1,100 farms 1,000 acres and over; 782 farms ranging from 500 to 909 acres; 25,090 farms ranging from 175 to 499 acres; 68,707 farms of 100 to 174 acres; 87,973 farms ranging from 50 to 99 acres; 50,221 farms ranging from 20 to 49 acres; and 38,499 farms that are 19 acres or less. The farms increased one per cent. in size, and the farm acreage decreased two per cent. in ten years.

The Impossible Combination.

Andrew Carnegie, at a recent dinner in New York, said of a certain labor trouble:

"It is silly of employers to pretend, in these troubles, that they are always in the right. Employers are often in the wrong; often unreasonable. They often—like Mrs. Smith-Jones—ask impossible things.

"Mrs. Smith-Jones, taking a villa at Palm Beach, engaged for butler a stately old colored deacon.

" 'Now, Clay,' she said to the old fellow, 'there are two things I must insist upon—truthfulness and obedience.'

" 'Yes, madam,' the venerable servant answered, 'and when you bids me tell yo' guests yo's out when yo's in, which shall it be, madam?' "

Fertilizer Suggestions From Crops.

"For most purposes a 'complete' fertilizer is the best; that is, one containing nitrogen (expressed in the form of ammonia), phosphoric acid and potash. All plants and every crop require these three food elements in varying amounts, and where the soil is naturally deficient in any one of them, a fertilizer should be selected containing a large percentage of the deficient element. While no fixed rules can be stated, sometimes the crops themselves give suggestions; for example, when plants are pale green in color, or with small growth of leaf or stalk, a fertilizer high in ammonia should be selected. Potash develops the fruit and flavor, and if such crops as corn, cabbage, potatoes, apples, etc., are lacking in these respects, one of our brands high in potash should be used. Phosphoric acid aids general stamina and early maturity, is needed by all plants and is found in all our fertilizers. It produces in grain crops plump kernels and early maturity. Our many brands give a wide selection, and although all are well balanced in regard to this ingredient, it is a simple matter to use one with an extra content of phosphoric acid when needed."—From Bowker's Fertilizer Catalogue, 60 Trinity Place, New York.

Houses That Mar or Help the Landscape.

Farm-house architecture is one of the blessings that we are getting with the development of engineering in our colleges. We are not sure that our high schools should not take up this one phase of engineering, namely, architectural engineering.

Most of the houses in the country to-day have been designed by people having no knowledge of the principles of architecture. As a result, many of the houses are not pleasing to look at; some of them are not conveniently arranged; many of them are unhealthy, and some of them are so little durable that they are going to pieces half a century before they should show much deterioration.

A house that is well built in every way may last several lifetimes; and houses that have lasted more than a century are still quite common in some parts of this country and Europe. They show the possibility in house construction.

Beauty in house architecture has several values to the resident in the country. It is more lasting than it is likely to be in the city.

In growing cities many of the very best houses are soon caught in the zone between the built-up business portion and the good residence portions. This midway zone is continually being shoved out like a great wave to engulf the residences and render them undesirable. In time the most beautiful as well as the poorest of the buildings in this zone have to go to give way to buildings devoted to various kinds of business.

But in the country the well-built house may stand for several lifetimes. Therefore it is more important that the country house should be well built and beautiful than that the city house should be well built and beautiful.

The country house that helps the landscape must be well located, and a great many houses are badly located. It will pay almost any man about to build to pay a good sum for the advice of a landscape gardener of repute to tell him just where his house can be best located, to give the best effect in relation to the rest of the landscape. If it costs him a hundred dollars to get this advice, it may be worth a thousand dollars to him if he wishes at any time to sell his place, and before that time it will be a source of great pleasure to him every time he approaches the homestead.

Either the advice of the expert must be secured or the owner of the property that is to be built on must educate himself by the help of books or otherwise to know the principles that enter into the right location of farm houses. The latter method is one that should be encouraged, but it is one that is becoming effective but slowly. Ultimately every locality will have its local expert on such matters.

The outlines of the building or the group of buildings constitute an important factor, and a man having no experience in architectural matters should hesitate about designing his own house. Many of the farm houses we see are frights. They are often great, ungainly, double-storied boxes that offend the eye with their angles and squares, etc. Even their shadows increase their ugliness.

The house of beautiful lines and proportions and that is placed to the best of advantage to be looked at is an improver of the landscape and enhances the value of the community in which it stands.

St. Louis Root Quotations.

Recent quotations of root prices upon the St. Louis market were as follows: Spring-dug Golden Seal, $1.50 per pound; old worth more. Ginseng—Wild, $4.75 to $5.00, and cultivated $4.50 to $4.75; damp less; Lady Slipper, 15c.; Seneca, 32c.; Pink, 16c.; Black (dry), 5c.; May Apple, 3½c.; Snake, 22c.; stemmy and toppy less; Echinacea or Blacksnake, 15c.; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4½ to 5c.; Blueflag, 5c.; sassafras—Bark of root, 5c.; bark of tree valueless; Wild Ginger, 8c.; Spikenard, 3c.; Scullcap, 7 cents a pound.

INSURE THE HARVEST PROFIT

THE profit from all the work, time, and money you put into your grain fields in the spring and summer depends on the harvest. Preparing the soil, planting good seed, and caring for the fields while the grain is growing—all are important—but the harvest is most important of all.

You must appreciate how much depends on the harvesting machines you will use. You know that you cannot afford to risk using a machine that may break down during the few days in which you must harvest the value and profit of a hundred day's work. Why not take a lesson from the experience of millions of other progressive farmers by choosing one of the six famous I H C harvesting machines?

Champion McCormick Osborne
Deering Milwaukee Plano

Your time cannot be used to better advantage now than in looking over your present equipment and in investigating new machines if you are in the least doubtful of the capacity of your old machines to stand the strain of another season's hard work.

IHC
Service Bureau

The purpose of this Bureau is to furnish farmers with information on better farming. If you have any worthy question concerning soils, crops, pests, fertilizer, etc., write to the I H C Service Bureau, and learn what our experts and others have found out concerning these subjects.

Above all, your harvest must be carried on without interruption. The rapidly ripening grain waits for no man. Delays at harvest time are too expensive to risk. Your harvesting machines must be right.

It takes time to consider carefully before deciding on any harvesting machine. You not only want dependability, efficiency, strength, and durability, but you also want a machine backed by a reputation that insures all these things. You want a machine backed by an organization that insures your getting absolutely interchangeable parts quickly in case of emergency. Don't overlook that vitally important point.

Many years of experience and constant improving has placed I H C harvesting machines in a class by themselves. Whether you choose a Champion, McCormick, Osborne, Milwaukee, Deering, or Plano, you are assured of a machine that is built according to the best principles of construction worked out by I H C experts after years of careful observance of harvesting machines at work, under every condition, in the fields of thousands of farmers throughout the country.

Why not see the I H C local dealer at once? Now, while you are not nearly as busy as you will be later, is the time to give the harvesting machine question careful thought. Before another sunset insure the profit of a hundred days. Let the I H C local dealer tell you which of the six I H C harvesting machines is best for your requirements—Champion, McCormick, Osborne, Deering, Milwaukee, and Plano—all of the highest quality. Do not overlook their efficient lines of haying machines and tools.

Don't experiment with binder twine, either. Get one of the seven perfectly dependable brands of twine and be sure. Choose Champion, McCormick, Osborne, Deering, Milwaukee, Plano, or International—in Sisal, Standard, Manila, and Pure Manila brands.

If not convenient for you to call on the I H C local dealer this week, write at once for catalogues and any information you especially desire.

The Oats Market Situation.

This is written on the first day of May, 1911. The cash price of No. 2 oats is 9½ cents lower than a year ago. This is St. Louis basis for cash oats received in car lots and sold by exhibit of samples on the Merchants' Exchange. The closing price, April 29th, was 32½ cents a bushel, against 42 cents a year ago.

At Chicago, where the trading includes what are called futures, they buy and sell oats for delivery May 31st, July 31st and September 31st. These are called May, July and September options. The May deliveries are wound up and closed out on May 31st. Last year, on April 30th, the May oats option was quoted at 41⅛ cents a bushel, and this year, April 29th, at 31⅛ cents, a clean decline of 10 cents a bushel. The July oats option last April closed at 40½ cents, and this year at 31⅝ cents. Last year the September oats option was quoted, April 30th, at 38¾ cents, and this year at 31¾ cents, a decline of 7 cents.

Briefly stated, comparing the May, 1910, option against the May, 1911, option, the market for oats is 10 cents a bushel lower.

On a percentage basis, the reduction is about 24⅓ per cent. So far as farmers are concerned, the bulk of trading in oats is 25 per cent. lower than a year ago. There are several causes for it, the principal one being an oversupply. One great crop was raised after another. The surplus of oats above the quantity consumed by farmers and for sale in the usual way is greater than ever. Another cause is the proposed misnamed reciprocity treaty with Canada, which is in danger of being passed during the month of May. At this date Canadian oats admitted to this country must pay 15 cents per bushel customs duties for the support of the United States government. The proposition now before Congress is to make the Canadian farmer a present of this 15 cents a bushel and let him dump his surplus oats into the United States markets free and untaxed. Canada, so to speak, is long on oats and short on population, consequently the government at Washington, with the best intentions and the worst possible judgment, is straining every nerve to give the United States farmer the worst of it. If there is a fraction of a cent of profit remaining to United States farmers in the production of oats, the misnamed reciprocity agreement with Canada will shake it out.

Will Bring in Wheat.

A grain circular issued by a Chicago firm says: "There is no doubt that on the passing of the reciprocity agreement there will be a great movement of Canadian wheat into the Northwest and through the lakes to milling trade, which would curtail the use of our interior wheat and depress the price. While the administration is committed to the agreement, delay in its passage may yet bring us to the point where wheat for May delivery will have a sharp advance. In view of this the market is apt to be very nervous until this issue of free wheat is finally settled."

Malting Barley Prices.

Chicago Board of Trade item, April 24th: "Malting barley sold at $1.16 per bushel Saturday, the highest price in twenty-five years. Albert Somers, of Somers, Jones & Co., started the ball a-rolling by selling a car at $1.15, which stood as the high market until just before the close of the day, when the top price was paid. Owing to a scarcity of raw material it is expected that some of the malsters will be forced to close their plants, not only here but in the East. No relief from present high prices can be expected until the new crop begins to move."

Wanted at Once 10,000 Farmers

Free Farms for Those Who Act At Once. Independence and Quick Wealth. Read Below, Then Write Us.

You have read of the fortunes quickly made by the **Wheat Kings, Live Stock Breeders** and **Farmers** of Canada. You know of many thousands who, during the past few years, left the States and with little or no capital **reaped independent wealth on The Wonderful Canadian Plains. You can do as well.**

Many left prosperous farms or other enterprises and quickly bettered themselves because of the unusual conditions here which make it possible to **achieve in a short time** that which it takes many years to accomplish in the States. **You can do the same.**

For nearly 1,000 miles the **Grand Trunk Pacific Ry.** crosses an Empire which for natural wealth has no superior in the world. **You are wanted to help develop it.**

The soil is equal in fertility to that of the great American Corn Belt. Much of this land **can be acquired free** by the liberal homestead laws of Canada. More can be purchased at little cost. **The Grand Trunk Pacific Ry. will help you make a selection** and assist you to locate.

This great trans-continental line can prosper only in proportion to the prosperity of the settlers upon its right-of-way, and it is one of the most important features of the business of this Railway to see to it that each Farmer has every advantage and facility with which to accomplish the broadest possible success.

The Grand Trunk Pacific Ry. has nothing to sell. Its object is to quickly locate 10,000 additional Farmers along its right-of-way, and to do so in a manner that will insure their prosperity speedily and to the limits of the wonderful resources of the country in which **a single crop frequently pays all costs of the farm.**

A recent Homeseekers' Excursion under the direction of the Grand Trunk Pacific Ry. carried 189 persons, of whom 185 remained and settled. Where else has the advantages of a country appealed so strongly to the judgment of the majority?

The Climate is ideal. Excellent Schools and Churches. Good Roads, cash markets and unsurpassed transportation.

This is the last large area upon the continent open for settlement. **This land will soon bring from $100 to $200 per acre in the open market, thus multiplying your money** while it **annually piles up** handsome **profits** from **wheat, potatoes, onions, vegetables, berries, alfalfa, field peas, timothy, oats, barley** and **flax.**

Write today for the free book, **"Farming, Ranching and Social Conditions in Western Canada."** It tells the story of a **fortune for you.** Remember it is to your advantage to let the **Grand Trunk Pacific Ry.** help you. Will you join hands with this great corporation for mutual success?

Address, **W. P. Hinton, General Passenger Agent Grand Trunk Pacific Ry.,** Room 26, Union Station, Winnipeg, Manitoba, Canada.

Mexican Cattle For Kansas.

It is reported from El Paso, Texas, that Gen. Don Louis Terrazas, of Chihuahua, Mexico, has sold 40,000 head of cattle to Mr. F. H. Evans, who has a ranch near Garden City, Kansas. The deal is said to involve $1,600,000, which is probably a high guess. The delivery of these cattle will indicate peaceful conditions where the people are supposed to be at war.

Top-price Yearlings at Chicago.

At Chicago, on April 26th, Clay, Robinson & Co. sold for O. M. Meeker, of Attica, Ind., twenty-four head of Aberdeen-Angus and Shorthorn steers and heifers averaging 923 pounds at $6.25 per 100 pounds. A good many yearling cattle were sold at Chicago during the week, but this load handled by Clay, Robinson & Co. topped them all.

The National Beverage.

Coca-Cola has stood every test. The most enjoyable, refreshing, thirst-quenching beverage. Sold at every soda fountain in the United States. Also order of your grocer.

The Corn Market Situation.

The immense crop of corn raised in the year 1910 has by its own weight caused reduced prices.

To all intents and purposes corn is 10 cents a bushel lower than a year ago. This is a decrease in price in one year of 17½ per cent.

There is no use trying to attribute the decline to any other cause than the immense crop. There are other causes, but they need not be mentioned to-day. We will therefore content ourselves by considering the market as it is.

In previous mention of the corn market we stated that the trade expected corn to continue to sell around 50 cents a bushel. We also stated that it was reasonable to believe that corn had touched bottom. We continue to be of the opinion that people who buy and sell corn keep themselves pretty well posted in regard to crop conditions and the trade movement.

But they cannot trade and keep their secrets at the same time. When one man agrees to sell corn in September at so much a bushel and another agrees to receive it, and they both put up money to bind the bargain, it becomes a matter of record which cannot be hid from the public, and a number of such trades represents the view of the market which is backed up with actual sales.

On April 29th, on the St. Louis market, cash corn, No. 2, sold at 52½ to 52¾ cents a bushel, and the man who paid the money received the corn. This is 6½ cents higher than the close of business on March 31st and 8½ cents better than February 28th, when the quotation was 44 cents. It is, however, 11 cents lower per bushel than a year ago.

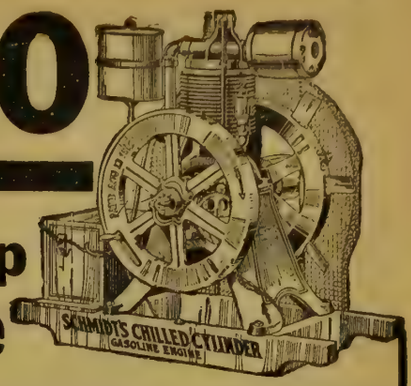
To the Chicago market we look for the prices which to some extent control values all over the country. On April 29th the May option was quoted at 52¼ cents, July at 53⅛ cents, and September at 52⅝ cents. In these three figures we have the consensus of opinion of the Chicago grain trade in regard to corn values for the next five months. These figures are subject to change, and do change nearly every business day, but it takes bona-fide sales to change them.

A Record-breaking Holstein Cow.

Pontiac Clothilde DeKol, 2d, a Holstein-Friesian Cow owned by the Stevens Bros. Co., Liverpool, N. Y., has broken all records for butter-fat production for periods of seven and thirty days. This wonderful cow, tested under the supervision of Cornell University, produced in seven consecutive days 646.1 pounds milk containing 29.766 pounds of fat, and in thirty days 2,588.4 pounds milk containing 116.229 pounds fat, the amount of fat for the week being 1½ pounds in excess of anything before known. Cornell University estimates that the fat produced is equal to 34.73 pounds of the best commercial butter for the week and 135.6 pounds for the thirty days.

Our State Universities assert that dairy farmers are losing millions of dollars every year through the use of scrub cows that do not produce one-fourth as much milk and butter as did Pontiac Clothilde DeKol, 2d. Holstein breeders are striving to lessen this great loss by making it possible for farmer-dairymen to so grade up their herds with the great milk and butter producing Holstein blood as to double the annual production of each cow. When this is attained, better milk can be produced more cheaply and yet at a greater profit, which will be to the advantage of both producer and consumer.

$7.50



And You Keep This Great Engine

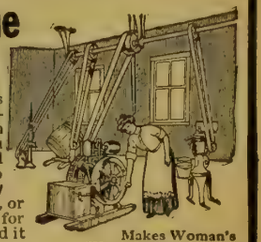
Yes, sir, that's right—you keep this engine for $7.50, a wonderful gasoline engine offer, an offer without a parallel. We ship you Schmidt's Chilled Cylinder Gasoline Engine on your simple request without an order or any promise from you. You use the engine 10 entire days, use it all you want to. Then if you don't want it, send it back at our expense. If you do wish to keep it, pay us **only $7.50 and the rest in the easiest monthly payments. We send you the engine free,** to prove that it is the greatest **air cooled** 3 horse power engine on earth. It is the only engine with the marvelous, powerful **chilled cylinder.** The only engine for farm use with a **spark retarder.** The new type gasoline engine that has revolutionized the gasoline engine industry. The only engine good enough to send out on **actual free trial** without a cent down in any way.

Ten Days' Trial FREE

This is the first genuine free trial ever offered on gasoline engines for farm and shop use. We want you to see that women and children can run this engine. Use the engine to run any machinery you have—the pump—separator—washing machine—corn sheller—grinder—anything. Engine is ready to run when you get it. We will send you prepaid our sensational offer and our very useful book "How to Use Power" free.

5 Years Guarantee Schmidt's Chilled Cylinder Gasoline Engine is absolutely guaranteed for 5 years in every piece and part. The biggest bank in Iowa backs our $1,000 challenge offer.

Long Time to Pay



If you like this engine after trying it out for ten whole days you can keep it and take long time to pay for it on **easy monthly payments,** or after using it free for ten days, just send it back at our expense.

Makes Woman's Work Light and Easy

How to Use Power To all who will write promptly we will send our useful book "How to Use Power" free. Send us your name and address today.

Schmidt Bros. Co. Engine Works, Dept. 3135, **Davenport, Iowa**

THE STRAWBERRY CULTURIST.

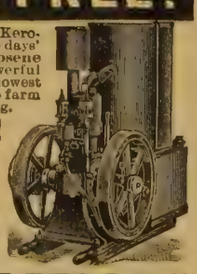
This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists.

It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book conains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for Sixty Cents. This is a splendid opportunity to get a good book for the cost of postage. An average crop of strawberries is 1,701 quarts to the acre. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

JOHNSTON MOWER drawn by automobile at the Washington University, St. Louis, Mo., did work in one day that usually requires three days. For catalogue of Johnston Harvester Co. Reapers and Mowers address the JOHNSTON HARVESTER CO., Box 117 B, Batavia, New York.

Use KEROSENE Engine FREE!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing.



Gasoline Going Up!

Automobile owners are burning up so much gasoline that the world's supply is running short. Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline. No waste, no evaporation, no explosion from coal oil.

Amazing "DETROIT"

The "DETROIT" is the only engine that handles coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Basic patent—only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h.p., in stock ready to ship. Complete engine tested just before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric-lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate amazing, money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, we will allow you Special Extra-Low Introductory price. Write!

Detroit Engine Works. 383 Bellevue Ave., Detroit, Mich.

Please mention Nat. Farmer and Stock Grower.

WITTE ENGINES

GAS — GASOLINE — DISTILLATE

Cheapest of all powers. One cent average cost per horse power per hour. Nothing can equal.

FIVE YEAR GUARANTEE

We build all sizes. Hopper jacket or water tank cooling. Inducements to introduce in new localities. Write stating size and style wanted.

WITTE IRON WORKS CO.
1653 Oakland Ave., Kansas City, Mo.

Please mention Nat. Farmer and Stock Grower.

THE LARGEST AND BEST LINE OF

WELL DRILLING MACHINERY

in America. We have been making it for over 20 years. Do not buy until you see our New Illustrated Catalogue No. 44. Send for it now. It is FREE.

Austin Manufacturing Co., Chicago.

Please mention Nat. Farmer and Stock Grower.

GET THESE BOOKS

If you raise stock for profit, you ought to read the latest edition of "Why Silage Pays." It is packed with surprising facts of profit-making possibilities in silage feeding, tells how and when to cut, gives endorsements of well known breeders and authorities and shows the Blizzard Cutter which we guarantee. With this helpful book we include our 1912 catalog, describing and showing various sizes of our machines. Both books sent free on request. Get them now.

"WHAT YOUR MONEY BOUGHT"

GREAT WOOD PRESERVER

The high cost of lumber now makes it necessary to preserve wood from rot, early decay and worms.

AVENARIUS CARBOLINEUM Registered

doubles the life of wood. Guaranteed. 30 yrs. on market. Nice color. Ready for use. Easily applied. Freight prepaid. Write for circulars.

Carbolineum Wood Preserving Co.,
Dept. 47, Milwaukee, Wis.

Please mention Nat. Farmer and Stock Grower.

Electric Handy Wagon

The farm labor saver that lasts a lifetime. Broad tired steel wheels carry any load. No wear-out to them. Don't be a wagon slave. The Electric saves thousands of high lifts. Best for hauling manure, grain, stone, fodder—everything you have to haul. Easier on the horses. Why not do your hauling the easy way? Send now for free book telling all about the one long-lived, steel-wheeled, real handy wagon. Address

ELECTRIC WHEEL CO., Box 40, QUINCY, ILL.

Pork Production With Forage Crops.

Bulletin No. 95, issued by the Missouri College of Agriculture, is a pamphlet of about forty pages by Prof. F. B. Mumford and C. A. Willson. It gives an account of experiments for the purpose of ascertaining which forage crops are most adaptable for swine; to determine the amount of pork that can be procured per acre with various kinds of forage and grain crops when hogged off, and to work out forage-crop rotations adaptable to hog farms.

The general plan of the experiment with the details from year to year afford a splendid study for the interested hog raiser, and should be studied from a copy of the bulletin to be obtained by writing to the Director Agricultural Experiment Station, Columbia, Mo.

The chapters devoted to "Hogging Off Rye" and "Hogging Off Corn" are specially interesting and instructive.

The following conclusions are arrived at by the experimenters:

1. The use of forage crops in the production of pork has been shown to be a more economical method than full feeding in a dry lot on heavy grain rations.

2. Blue grass made the most profitable gains in May and June. When supplemented with grain at the rate of from 1.5 to 3.0 pounds per head, the average profits per acre for the whole season, with pork at 6 cents, were $17.71.

3. Blue grass is profitable until the middle of August or until the grass becomes dry and unpalatable.

4. The amount of pork produced per acre with alfalfa was 596.8 pounds.

5. Red clover ranked among the first as a hog forage because of the palatableness of the feed throughout the season, and also because of its adaptability to rotations. The average amount of pork produced per acre was 572.2 pounds. Corn fed to 6-cent hogs on clover was worth 98 cents per bushel.

6. Rape fits well in hog forage-crop rotation, if clover is sown with it for the following year. In this experiment, it averaged a production of 394 pounds of pork per acre.

7. First-growth sorghum is adaptable for hogs, and furnishes excellent feed through July and August, when other forages are affected by dry weather. Hogs should be turned on when the sorghum is eighteen inches high.

8. Cowpeas gave an average return of 224.9 pounds of pork per acre.

9. The returns from an acre of rye grain, when hogged off, are practically equal to the returns when sold as grain. If, however, the added fertility be taken into account, they are greater.

10. The average amount of pork produced per acre, where corn was hogged off, was 395.2 pounds, which, with pork at 6 cents, would give a gross return of $23.71 per acre. If the humus and fertility which were retained on the land were taken into account, the returns would be much larger.

11. The number of hogs that may be kept on each acre of forage will depend upon the abundance of forage, but in general not more than ten to twelve head should be used.

12. The greatest returns have been obtained when grain was fed in addition to the forage at the rate of 2 to 3 per cent. of the weight of the hogs per day. The amount fed per head per day should be increased as the hog increases in size.

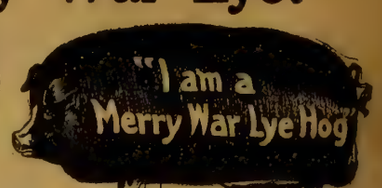
13. A very good plan in feeding 80 to 100-pound hogs on forage would be to feed per head, per day, during May 1.75 pounds of grain; during June, 2 pounds of grain; during July, 3 pounds of grain; and during August, 4 to 5 pounds of grain.

14. Gains made on forage are made at 20 to 30 per cent. less cost than gains produced with grain and dry-lot feeding. With pork at 6 cents the average value of a bushel of corn fed to hogs in dry lot was 66 cents; and the average value of a bushel of corn fed to hogs on forage was 80 cents, after a $10 charge had been paid for rent, taxes, etc.

15. When forages and grain crops are fed on the land which produced them, the minimum amount of fertility is removed, and the physical condition of the soil improved.

Don't Lose A Single Hog! Feed Merry War Lye!

With hogs bringing around $10.00 you can't afford to lose a single head from cholera, worms or other hog troubles. And there is no reason why you should, either, Mr. Farmer! With the aid of MERRY WAR LYE you can easily keep your drove perfectly healthy.



A Great Fattener and Health Preserver

Before MERRY WAR LYE was discovered, you used to hear it said: "Oh, Cholera is incurable," "You can't prevent your hogs coming down with Cholera," etc., but now millions of Hog Raisers know differently. For they have been convinced by the testimony of others or by their own experience that a little MERRY WAR LYE fed with the swill every day will keep hogs in a perfectly healthy condition, increase their weight and render them immune to contagious diseases.

Feed "Merry War" Every Day

MERRY WAR LYE comes in powdered form in cans with the convenient turning top covers. The time to feed "MERRY WAR" is every day. Make it a regular part of the daily ration and keep your drove in fine condition.

Follow these directions carefully: Mix one (1) tablespoonful MERRY WAR LYE with slop for ten (10) hogs, or one-half (½) can with barrel of swill. Stir well and feed night and morning. If your hogs are on a dry feed ration, mix one-half (½) can MERRY WAR LYE to each barrel of drinking water.

Not An Expense

MERRY WAR LYE is not an expense. It is an investment that yields an actual profit, because it not only prevents hog losses from Cholera, Worms, etc., but also puts on many pounds of good healthy flesh and fat.

So the best thing you can possibly do to insure your pork profits is to feed MERRY WAR LYE every day, just as regularly as you would the ordinary ration of swill or dry feed.

At Your Dealer's

While most up-to-date dealers handle MERRY WAR LYE, some dealers may offer you some other brand. If so, don't accept it, but explain to the dealer that while there are brands of Lye that are good for certain uses, yet there is only one kind—MERRY WAR LYE—that is safe and specially prepared for use in preventing and curing sick hogs.

So, if your Dealer can't supply you, write us and we will give you the name of one who can; and will also send you a valuable book on "HOW TO GET THE BIGGEST PROFITS FROM HOG RAISING." Send for this book today.

MERRY WAR POWDERED LYE comes in 10c cans, or 24 for $2.00, at Grocers' or Druggists'. There are no substitutes.

E. Myers Lye Co., Dept. 22 St. Louis, Mo.

Western Pork Packing.

According to the Cincinnati Price Current, pork packing in the West for the year closing March 31st was 21,755,000 hogs, against 24,162,000 hogs the previous year, and 28,996,000 hogs packed two years ago. These figures represent the largest and smallest pork-packing records in the last fourteen years.

Also, according to the Cincinnati Price Current, the packers had to pay $424,000,000 for the 21,755,000 hogs; they paid $397,000,000 for the 24,162,000 hogs, and they paid $358,000,000 for the 28,996,000 hogs. This shows that it is not the largest crop that brings the farmer the most money.

The Poland-China Improvers.

"Prior to about the year 1870 the Poland-Chinas averaged larger than now, were inclined to coarseness, or sponginess of bone, had much heavier, drooping ears, and were spotted with about even proportions of black and white. Since then the tendency each year has been to breed them with more black, until now those in highest esteem have identically the color and markings so long characteristic of the Berkshires, viz., solid black, with white feet, white tip of tail, a little white on or about the face and jowl, and occasionally a splash of white elsewhere. Their ears are medium or small in size, but still drooping, and are pliable and silky. A. C. Moore, of Fulton county, Illinois, and D. M. Magie, of Butler county, Ohio, were the men who, by judicious selection, careful breeding and extensive exhibiting and advertising probably did most to bring this stock of hogs, in its early days, to wide and favorabble public attention." — From Coburn's "Swine in America."

Razorbacks and Improved Hogs.

In the summary of a hog-feeding experiment by Prof. John C. Burns, of the Texts Agricultural College, we find that there was practically no difference between the "razorbacks" and the improved hogs as to the quantity of feed required to produce the same amount of gain. The improved hogs gained much more rapidly, thereby making the much larger gain in the same length of time. They sold for 65 cents more per 100 pounds and were more profitable by $1.48 per head. They dressed out 2.38 per cent. higher.

On April 1st the Missouri State Board of Agriculture reported the number of hogs on feed 80.9 per cent. of an average year; cattle on feed, 75.5; and brood sows, 101.4 per cent. of the usual number in the state.

On the St. Louis wholesale market consignments of peanuts are selling at 3 to 3½ cents a pound.

COMMERCIAL FERTILIZERS.

Comparison of High and Low Grades by the Missouri Agricultural Experiment Station.

There is a great demand for cheap fertilizers. Too many farmers are asking for the fertilizer cheap in price, regardless of the plant food value. Some farmers claim they are getting better results with a low-grade fertilizer containing 0.82 per cent. nitrogen, 7.00 per cent. available phosphoric acid and 1.00 per cent. potash, purchased at a cost of $19 per ton, than they do from the same number of pounds of raw bone meal costing $30 per ton. It is needless to dispute such statements as this. There are many other factors to be considered in crop growing besides the commercial fertilizer used.

The values reported in this bulletin were agreed upon at a conference with the fertilizer manufacturers in 1908. A study of the results of the analyses will show that for nearly all high-grade fertilizers, the valuations given represent approximately the cost of these fertilizers delivered to the consumer in most parts of the state. These high-grade fertilizers represent the best of the fertilizer material, therefore it can be reasonably said that the valuations used, i. e., four dollars per unit (twenty cents per pound) for nitrogen, seventy cents per unit (three and one-half cents per pound) for total phosphoric acid, one dollar twenty cents per unit (six cents per pound) for both available phosphoric acid and potash, represent about what the farmer should expect to pay for plant food in the form of commercial fertilizers.

If, on the other hand, these same valuations are applied to the low-grade fertilizers, it will be seen that these fertilizers will cost the farmer from five to ten dollars per ton more than they should. This does not mean that in these cheaper fertilizers the plant food is worth more per pound than in the high-grade fertilizers. On the other hand, it can be shown that in many cases the plant food is of much less value.

In order to furnish a low-grade mixed fertilizer containing nitrogen, 0.82 per cent., available phosphoric acid 7.00 per cent., potash 1.00 per cent.; or one containing nitrogen 1.65 per cent., available phosphoric acid 8.00 per cent., potash 2.00 per cent.; or a steamed bone containing nitrogen 1.65 per cent., total phosphoric acid 20.00 per cent.; or an acid phosphate containing 10 per cent. available phosphoric acid, it is necessary to use low-grade material **or to add ground cinders, molder's sand or some other inert substance as a filler.** The addition of this filler makes an increased cost to the manufacturer which the consumer must pay. The price which the farmer pays for the fertilizer is based on the delivery at his railroad station. The manufacturer must, therefore, add the extra cost of freight on this filler which in no way increases the value of the plant food but must necessarily increase its cost. In addition to this, the farmer must haul the added filler from the station to his farm when he could just as well have taken so much dirt from the roadside to apply on his land. For illustration, take the low-grade mixed fertilizer mentioned above. This is reported by many dealers as being their best seller at from nineteen dollars to twenty-one dollars per ton. At the values used, this fertilizer is worth as follows:

0.82 per cent nitrogen at $4.00 per unit	$ 3.28
7.00 per cent. available phosphoric acid at $1.20 per unit	8.40
1.00 per cent. potash at $1.20 per unit	1.20
Total value of this fertilizer.	$12.88

This grade of fertilizer usually contains from one-half to one per cent. insoluble phosphoric acid. If this insoluble phosphoric acid is from bone, it should be given a value of forty cents per unit, which would increase the value of the fertilizer twenty to forty cents per ton. More than 90 per cent. of the phosphoric acid in the mixed fertilizers is from rock phosphate treated with sulphuric acid, and it is quite probable that this insoluble phosphoric acid should be considered as practically of no value.

The amount of plant food in the above fertilizer can easily be obtained from good high-grade material as follows: Nitrogen (0.82 per cent.), 16.4 pounds per ton, can be obtained from 125 pounds of dried blood, 110 pounds of sodium nitrate, or 200 pounds of tankage. Seven per cent. available phosphoric acid, 140 pounds per ton, can be obtained from 1,000 pounds of 14 per cent. acid phosphate or from 875 pounds of 16 per cent. acid phosphate. One per cent. potash, twenty pounds per ton, can be obtained from forty pounds of good commercial sulphate of potash. This makes a total of from 1,025 pounds to 1,240 pounds of good fertilizer material. **The balance of the ton, 975 to 760 pounds, is useless filler, upon which the farmer pays freight because he demands a cheap fertilizer.**

This, however, is not the worst part of the story, for in these cheap fertilizers, garbage tankage and muck filler are used to a considerable extent to supply the bulk and at the same time to furnish considerable portion of the nitrogen, the most expensive ingredient of the fertilizer. Special investigations at the New Jersey Experiment Station and elsewhere have shown that much of the nitrogen from such sources is not readily available as plant food, and that in many cases **such nitrogen is worth less than one-third of that obtained from high-grade fertilizer material.**

Many farmers say they cannot afford to spend more than one dollar and fifty cents per acre for fertilizer on their corn or wheat, which means they are using about one hundred and fifty pounds per acre of the low-grade fertilizer above mentioned. A better fertilizer containing 2½ per cent. nitrogen, 24 per cent. phosphoric acid from bone and 4 per cent. potash can be bought for about $30 per ton. The guaranteed valuation of this fertilizer is:

Nitrogen 2½ per cent. at $4.00 per unit	$10.00
Total phosphoric acid 24 per cent. at $0.70 per unit	16.80
Potash 4 per cent. at $1.20 per unit	4.80
Total	$31.60

One ton of such a fertilizer costing thirty dollars **will contain over two hundred and fifty pounds more of total plant food than two tons of low-grade fertilizer costing forty dollars for the two tons.** The one ton of high-grade fertilizer contains about six dollars' worth of plant food more than the two tons of cheap fertilizer, making a saving to the farmer of about sixteen dollars, with only one-half as much to haul from the station. If he uses one-half as much per acre of the high-grade fertilizer, he is using more plant food with an actual saving of at least sixty cents per acre.

"Just get the cost of duplicating any one of your farm buildings"

—Says the Little Paint Man

Just get the cost of duplicating any one of your farm buildings and compare that cost with what the building cost you originally. Then you will realize the importance of making your buildings last as long as possible.

The only thing that prolongs the life of a farm building is paint—not only prolongs its life, but improves its appearance—and paint costs so little.

Find out what lumber costs today, find out what building costs, and then send for that little book, "Paints and Varnishes for the Farm," which will tell you how to get the kind of paint that offers the best and longest protection for everything about your farm that needs paint.

If you should also ask for the Portfolio showing color schemes for the exteriors of farm buildings, you will see how well buildings can be made to look without any extra cost for paint. The same paint that protects them will also beautify them if it is Sherwin-Williams Paint and it is properly selected as to colors.

Address THE LITTLE PAINT MAN, care of

Lightning Protection For Farm Buildings.

The season for electrical storms will soon be upon us, and with it comes the question of proper protection against lightning.

So much fun has been made of the farmer and the lightning-rod agent that the farmers have come to the conclusion that lightning-rods are a fake, but this is far from the truth.

A good lightning-rod is the best protection against damage from lightning. It is a well-known fact that lightning will take the easiest path to the ground. This may be a high tree, a church spire, a chimney, or a telephone wire. It is reasonable to assume if a lightning-rod is a good conductor of electricity and makes a good contact with the ground, that it will protect property.

A good lightning-rod should be made of copper or iron, of ample cross-section, with a point projection above the roof of the buildings and the lower end well grounded. A good rod for this purpose, if of copper, should weigh six or eight ounces a foot; if of iron, it should weigh about two pounds a foot. The lightning-rod should be well separated from the building by porcelain or glass insulators. To ground the rod, it should be riveted and soldered to a large copper plate three feet by three feet, so as to make good contact, the plate buried in charcoal in a damp place.

If an old rod is already in place, go over it carefully to see that it is not broken, as a broken rod is worse than none, because lightning will start down the rod and leave it and enter the building where the rod is defective.

Directions For Personal Safety During Thunder Storms.

Do not stand under trees, near wire fences, in doorways, or near cattle, chimneys, or fire-places, and never use the telephone during electrical storms.

Lightning strike is not, as a rule, fatal. If a person is struck by lightning, do not give up hope, but stimulate respiration and circulation, keep the body warm, rub the limbs rapidly, give water, wine, or hot coffee, and send for a physician.—F. A. Delay, Colorado Agricultural College, Fort Collins.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly
By THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.

Entered at Postoffice at St. Louis, Mo., as second-class matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

It will always be necessary for farmers to raise crops, and it may also be necessary for the farmers to place the crops right on the tables of the people. Some day the wheat grower will also have to be the miller, the baker and the retailer. This appears to be the only way to serve the interest of the producer and the consumer.

Our Grape Premium.

Just at the right time we are enabled to make a special subscription offer that ought to bring in ten thousand subscribers in thirty days. The proposition appears on page 29. We are offering the Ladies' World for one year; The National Farmer and Stock Grower for one year; and eight two-year-old grapevine plants that are just ready to plant, all for one dollar. They are two-year-old vines from the best Chautauqua vineyards. The Ladies' World is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. The National Farmer and Stock Grower is the good stand-by; does not claim to be everything, but a clear-cut, practical, useful and interesting publication of value on any farm. We hope our readers will look up page 28 and act quickly.

We quote with approval an article headed "Marketing the Grain Crops." Contracts for future delivery of grain are just as necessary for the disposal of the crop as are the ships that transport the grain from one country to the other.

Congress and the Farmers.

We are of the opinion that the so-called reciprocity treaty with Canada is the entering wedge for the admission of farm products into this country free of duty from all parts of the world. We are absolutely opposed to any such proposition and believe it to be a great error. It is a mistake on the part of the President, of his Cabinet, and of all those who have so far voted for it. We are also opposed to another misnamed piece of proposed legislation which is entitled the "Farmers' Free List," which is simply driving the wedge nearer home until it practically destroys every favorable industrial condition by which we have lived and thrived these many years.

Placing hides on the free list was the first injurious piece of unnecessary legislation calculated to destroy the protective system. Removing the duty on hides has been of no benefit to anyone except foreign producers and speculators. The interest of the farmers and stock raisers was sacrificed without their knowledge or consent, and, having submitted to it without remonstrance, this later sacrifice is thrust upon them.

The present situation is more serious than has ever before confronted the farmer. This country is an immense agricultural area combined with resources for the creation of wealth by manufacturing. The manufacturing interests are protected by customs duties, and these duties never will be abandoned, no matter how much clatter there is about them; but the farming interests have been selected to have their revenues decreased by law and all tariff duties on agricultural products removed.

The Democratic political party has always advocated lower duties on foreign products, and in our opinion is foolishly consistent in doing so. If we send money to Australia for wool, to Canada for grain and to Argentine for beef, and never get it back again, that is what the Democratic party has always advocated. Take the duties off foreign goods and add additional taxes to our own burdens, that is the Democratic policy, and there is nothing insincere about it, no matter how destructive a policy it is; it is the Democratic policy, open, free and above board.

But with the Republican party it is different; that party has advocated protection to all American industries by reasonable tariff duties and every Republican was elected on said platform. The country producers were included in the protective tariff platform and have a right to insist that not one single item of agricultural produce shall be admitted by Republican votes from any foreign country without the goods paying customs duties before entering the country.

Every Farmers' Association should follow the grand example of the National Grange and get busy. There are not enough farmers' representatives in Washington. The battle is to be fought out in the Senate. There ought to be one hundred thousand farmers in Washington this month of May, and those who cannot go should write to their Senators at once. A list of the Senate is in this paper. This is the one time in a hundred years that farmers ought to assert themselves. If you wish foreign agricultural products admitted into this country duty free, write and say so; if you are opposed to the admission of foreign agricultural productions duty free, write and say so. It is up to the farmers to stop the legislation which will set back agricultural improvements twenty-five years.

We believe it to be our duty to recommend that every possible effort be made to defeat both the misnamed reciprocity treaty and the equally dangerous farmers' free list. If both these bills are defeated it will be better for the President, better for the administration, better for Congress, and better for the people. The Senate ought to reject both bills, adjourn and take a six-months' vacation.

But One California.

There are productive lands in every state and country, but when all is said and done there is but one El Dorado, which means a region of exceeding richness. There is a story which ought to be read by everyone who is considering their future from an agricultural or horticultural standpoint which is advertised on page 9.

The PROVEN MACHINES

You don't "guess" when you buy the **Waterloo Boy Gasoline Engine** and the **Buttercup Cream Separator.** They have *proven* themselves for years and are daily making good in actual service. They have stood the test of the hardest work which shows whether a machine is built to last. They have earned their right to leadership.

The Waterloo Boy

Has a clean record of 18 years of making good. Read what users say about it. See your neighbor's engine at work. You'll find these vital points proven: The simplest, most economical engine to run, starts easy summer or winter, develops the most power for its weight and rating, don't get out of order, and repair bills practically nothing.

The governor speed lever, patented mixer, improved igniter, open jacket and interchangeable parts are all strong features of superiority. The very best of material and expert workmanship give durability to the **Waterloo Boy.** We are putting out over one hundred engines per day, and steadily increasing our capacity.

The Buttercup Cream Separator

Skims down to 1-100th of 1% of the cream—and that's record efficiency. It is heavy, strong and simple in construction and has helical gears of phosphor-bronze, the hardest gear metal known. It will be on the job good as new, after your house tumbles down. It has a big, low, convenient bowl, runs light and is easy to clean. It is the separator **you** ought to have at the price you **want** to pay.

We back up the merits of the **Waterloo Boy** and **Buttercup Cream Separator** with square dealing—you can count on exactly what we say. We've never failed to keep our promises.

We guarantee both machines for 5 years.

Our catalogs tell the whole story. They are FREE. Write for them today.

Something About Canada.

Canada produces all the grain products we produce in the United States.

It is not a great corn country, but they raise more wheat, oats, rye and barley to the acre than we do.

They raise all farm animals that we raise.

The area of Canada is almost half a million square miles larger than the United States. The soil is fertile, the climate and the seasons favorable. Land is cheap; there are millions of acres that may be homesteaded free. All they need is a market—people to eat what they produce. Land and labor are profitable only when there is a good market for the things produced.

Canada has less than eight millions of people in the entire Dominion. They have only four cities with a population of more than one hundred thousand people. The combined population of Minneapolis, St. Paul, Milwaukee, Chicago, Duluth, Buffalo and New York is eight and three-quarter millions.

There are more people in these seven cities than in the whole Dominion of Canada. These cities are at their door. They can get their products into most of these by water transportation easier and cheaper than we can get our products to them. These cities are our best markets.

Farm machinery costs about the same there as here. There is one large concern that manufactures most of the machinery in the Dominion.—Milk Reporter.

Money From Hogs on Forage.

The Missouri Experiment Station has just given out the results of an experiment lasting three years, which shows large profits from feeding hogs on forage crops.

The average income per acre from clover forage was $34.11; from rape and oats, $23.63; from corn and cowpeas, $29.08; and from blue grass, $17.71.

The estimates are all made on the basis of 60 cents a bushel for the corn fed and 6 cents a pound for the pork produced. The results are important as indicating what may be accomplished when the hogs themselves do all the harvesting.

This bulletin, which is numbered 95, was written by Dean F. B. Mumford and C. A. Willson, and can be had on request by writing to the Director of the Experiment Station, Columbia, Mo.

Increased Demand For Nitrates.

The increase in the use of nitrate of soda upon farms is over 26 per cent. in two years.

It was generally anticipated that a large increase in the consumption of nitrate of soda would be registered, but no one expected such a magnificent increase as is shown in the following figures. Whilst 1909 showed an increase of 196,000 tons, or 11½ per cent. upon the consumption of 1908, the year which has just closed shows a further advance of 15½ per cent., or 327,000 tons.

The figures are 2,251,000 tons, against 1,922,000 in 1909, of which quantity the Continent of Europe accounts for 1,531,000 tons, against 1,354,000 tons, an increase of 13 per cent.; the United States accounts for 503,600 tons, against 399,000 tons, an increase of 25¼ per cent.; the United Kingdom accounts for 121,000 tons, against 110,000 tons, an increase of 9 per cent.; other countries account for 92,460 tons, against 65,280 tons, an increase of 35 per cent.

The increase is eloquent testimony to the ever-increasing favor in which this fertilizer is held by agriculturists throughout the world, as well it may be, when we consider the many advantages it possesses. The article, as all who use it know, is clean, odorless and easy of distribution on the soil. Above all, it is marvelous in its effects upon plant life, quickening that which is ready to die and greatly increasing the bulk of the crop upon which it is strewn. In point of price, there is to-day no nitrogenous fertilizer so cheap, and perhaps none so effective, as nitrate of soda.

One reason why more nitrate of soda is being used in the United States is because of the increased mixing of fertilizers by farmers. This brings about a better proportion of ingredients. The high-grade commercial fertilizers are put up with due regard to correct proportion of ingredients for the crops they are intended for. But there is a regular deficiency of nitrogen in all low-grade mixed fertilizers. Directly the farmer mixes for himself he increases the nitrogen, and that is in part the cause of the increased sales of nitrate of soda.

Dr. Wm. S. Myers, 71 Nassau street, New York, is the great authority on nitrate of soda. If requested to do so, he will send free to any of our readers a booklet entitled "The Cost of Available Nitrate." It is worth many dollars on a farm.

GOOD BOOKS AND PAPERS.

"THE SANITARY CONSTRUCTION AND EQUIPMENT OF ABATTOIRS AND PACKING HOUSES." That is the title of Circular 173, issued by the United States Bureau of Animal Industry and is by G. H. Parks, Architect of the Bureau. To all who are interested in this subject Circular No. 173 is a valuable production. Address, A. D. Melvin, Chief of Bureau, United States Department of Agriculture, Washington, D. C.

THE FRUIT GROWERS' GUIDE BOOK. By E. H. Favor. This book is designed to assist fruit growers in the conduct of their business and is suitable for either the amateur or the professional fruit grower. It contains the latest information how to plant, prune, spray and pack important fruits. It contains 285 pages and is published by the The Fruit Grower, St. Joseph, Mo., at $1.00 per copy.

HISTORY OF BINDER TWINE. This is an article by Mr. H. L. Daniels in the Harvester World of April, 1911. It is very interesting and instructive. All who are engaged in growing grain should secure a copy of this article. There are other articles in the same paper of almost equal importance—"Turning Flax Into Twine," by T. A. Morris, and "A Few Facts About Twine," by Geo. L. Rice. Write to the International Harvester Company, Chicago, Ill., and ask for a copy of the April Harvester World. You will get it and enjoy reading it.

THIS BIG BOOK ON KEROSENE ENGINES MAY SAVE READERS $40 TO $200.

If readers who want to investigate and become a judge of real improvements and values in stationary engines for all purposes will send their name and address for the big new-color illustrated catalogue and literature of the Detroit Engine Works, they may save from $40 to $200 direct from the factory on the wholesale price when deciding to buy. These stationary engines for all purposes use common lamp kerosene oil for fuel, also gasoline, alcohol, naphtha or distillate. No change in equipment is necessary to change from one fuel to the other, and it is always easiest everywhere, besides cheapest, in operating to get kerosene. Every Detroit engine is sold direct on most liberal free trial, satisfaction and long-time guarantee—"protection that protects" the buyer, who is the sole judge of performance on his own work and at his own home. There is so much more to be said that the catalogue says it and illustrates it also. Write to Detroit Engine Works, 383 Bellevue avenue, Detroit, Mich., and ask for catalogue. Mention what power engine you are interested in and you will receive special information.

TREATISE ON THE HORSE.

This is a free booklet issued by Dr. B. J. Kendall Co., of Enosburg Falls, Vermont, which can be had by writing for it. It is by no means a cheap book. It answers the questions a farmer naturally asks directly there is trouble with his horse or mule. It is issued by the makers of Kendall's Spavin Cure, which is a remedy of thirty-years' standing. It will be an advantage to mention The National Farmer and Stock Grower when you write.

THE TARIFF AND THE FARMER.

In the congressional debate upon the Canadian Reciprocity Bill, Hon. Asher C. Hinds, of Maine, declared that the reciprocity agreement would disturb the proper equilibrium between the consumers in the cities and the producers on the farms. It would retard rural development, he said, and increase congestion in the cities. He protested against it in the name of the six million farmers who form the backbone of our civilization.

Light, well-bred, handy, fat native cattle sell well. For instance, fifty-nine steers, 849 pounds average, sold at $6.25 per 100 pounds on the St. Louis market.

Get this Genuine Alectride Tool Grinder on Free Trial

Harman Supply Co., 160 Harrison St., Dept 3135 Chicago
Please send me free and prepaid booklets explaining your free trial offer of your Alectride Tool Grinder.
Name _____
Address _____
No letter necessary! merely send the coupon.

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this genuine Alectride Farm Tool Grinder. Alectride is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Alectride **never** wears out. It does not glaze over. I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement and I will mail at once circulars explaining every detail of the ofier I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise

I merely want to place this Genuine Alectride Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Alectride (made of the substance of precious stones) sharpens your tools in from one-fourth to one-twenty-fifth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this machine the most severe tests—then unless you think that you positively cannot get along without this Alectride Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Alectride is really manufactured precious stones. It is even *harder* than the hardest diamond. Alectride will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of **our Great 10 Day Free Trial Offer.** Do this now. Do not delay.

Harman Supply Co., 160 Harrison St., Dept. 3135, Chicago, Ill.

A California Man's Wonderful Story

How he and his wife make a living and enjoy life on only one acre

Let us give you the story, written by himself, of a man who has found prosperity on **one** acre of California land. How he lives well and "has more money to spend than back in Ohio on an 80-acre farm."

Let him tell you himself, in his own homely but vigorous style, how thrift and industry combined with "farm sense" work this seeming miracle, and how, although elderly, California has restored health and vigor.

This man has no land to sell and nothing whatever to gain. You can get his unbiased testimony from the

Union-Southern Pacific

Standard Route of the West

along with books on California which tell you where to look for reasonably priced land, suitable for farming, truck gardening or fruit raising. Just address

Red Polled Cattle Records.

The Red Polled Cattle Club of America has issued a pamphlet entitled "Facts and Figures," giving origin and early history of the breed, importations and the organization of the club. There are quite a number of beef and dairy records, together with result of competitions at Beef and Dairy Expositions in which the Red Polls participated. Hardy A. Martin is Secretary, and should be addressed at Gotham, Wis. He will send a copy of "Facts and Figures" if requested to do so.

Mixing Oats and Bran.

When oats were selling comparatively high in price it often happened that barley was mixed with oats by dealers in order to cheapen the oats. Just now, with oats comparatively low in price and bran selling high in the East, oats are being ground to mix with bran. This information came from Mr. James Simpson, an oats specialist, who visited the Chicago market recently and who stated that the mixing was done because a ton of oats cost $4.00 less than a ton of bran. Many a dairy farmer who buys bran may profit by the information.

Largest Butter Contract.

It is reported that the Beatrice Creamery Company, of Lincoln, Nebraska, has made a contract to deliver five million pounds of butter the coming summer to Dillon & Douglas, of New Haven, Conn. The purchasing firm has several distributing houses in the New England States. This contract will amount to 228 solid car-loads of butter, and is mentioned as being the largest contract ever made. At the time this contract was made the Elgin butter quotation was 24 cents a pound.

Advanced Holstein Records.

The latest record of females tested for admission to the Advanced Registry of Holstein-Friesian cows is dated March 30th. The total of 238 animals, consisting more than half of heifers with first and second calves, produced in seven days 92,341.2 pounds of milk, containing 3,188.3 pounds of butter-fat, thus showing the milk to contain an average of 3.45 per cent. fat.

The average production for each animal was 388 pounds of milk, equal to 55.4 pounds per day or 26 quarts per day per cow. The butter production per cow was nearly 16 pounds per week. The significance of the report is the grand performance of the heifers, which shows that it does not require many years to bring up a good Holstein herd. Just fancy having cows that give better than six gallons a day before they begin to show their age!

Dairy and Creamery.

Cheese exportations during the week ending April 8th, 1911, were the largest for a week in five years. It all went to London and Liverpool. The reason for this great export is, that cheese is four cents lower than it was last summer.

In Iowa there are well-managed creameries, but in trying to make butter with less than 16 per cent. moisture they vary 4 to 5 per cent. in the same creamery.

It is announced that Los Angeles, Calif., is to have the largest creamery in the world. It will be four stories, fire-proof, of reinforced concrete construction, and on ground 100x160 feet. The entire cost will be a quarter of a million dollars.

The Richmond Creamery of Minnesota makes a difference of three cents between sweet and sour cream, with the result that the farmers are furnishing more sweet cream.

Announcement has been made by the Pennsylvania Railroad that it will not carry milk into the Philadelphia market that exceeds sixty degrees in temperature. This is in compliance with the order of the Board of Health.

At the last meeting of the Wisconsin Association of Creamery Owners and Managers, held at Madison, a resolution was passed opposing the state standard of 82½ per cent. butter-fat for butter as a detriment to the dairy interests of the state.

Joseph Crier, of Orland, Ill., reports to the Holstein Register that one of his large cows dropped twin bull calves, one weighing ninety pounds at birth and the other eighty-two pounds, their combined weight being 172 pounds.

At an auction sale of Holstein cattle by C. J. Nehrling at Homeland Farm, Plymouth, Wis., twenty-five females averaged $176 per head, and fourteen males averaged $56, and seven of them were from one day to two weeks old. The top-price cow brought $335.

Liza, a pure-bred Red Polled cow, produced 10,807 pounds of milk and 515¼ pounds of butter-fat in the year ending November 17, 1910.

According to C. M. Winslow, Secretary of the Ayrshire Cattle Association, the best record of the breed is by Mable of Sand Hill, a three-year-old, owned by S. S. Karr & Son—12,857 pounds of milk in one year, 502.06 pounds of butter-fat, equivalent to 585 pounds of butter.

At Dundee, Ohio, on March 22d, Sigrist & Aebersold disposed of fifty Holstein females at an average of $166.95, and the top price for a cow was $305. The eleven bulls sold from $50 to $200 and averaged $94.

The Milk Reporter says: "If you would get best results, shift your dairies so that the great surplus will not occur all in three months. The irregularity of the flow is what is now injuring the business."

To anyone who will send us the correct names and addresses of ten dairymen who are selling milk in small towns and cities we will gladly send The National Farmer and Stock Grower one year free of charge. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

"The best cow on earth will not pay for her keep when poorly cared for and half fed, and the poorer the keep the less the income. Dairying is not a game of chance. Successful dairying to-day is brought about by a live man, capable of getting at real facts and bunching them into a working realization."—Charles Morgan, in Ohio Farmer.

"For the first three months of 1910 the New York price of milk averaged 3.957 cents per quart, as compared with 3.637 cents for the same period of 1911. This is a decline of 12.8 cents per can, equal to about 8 per cent. For the same three months of 1910 the price of butter showed an average of 31.9 cents a pound, as compared with 25.53 for the same term of 1911, a decrease of 6.37 cents a pound, about 20 per cent."—Milk Reporter.

A Good Judge of Cows

is likely to be a good judge of a cream separator. The same quality of brains that enables a man to breed high-class dairy cattle, leads him to buy the best cream separator.

It is worth noting that the man who produced the World's Record Holstein cow

COLANTHA 4TH'S JOHANNA,

has a United States Cream Separator. This man is W. J. Gillette, of Rosendale, Wis.

And do you know that the owner of

JACOBA IRENE,

the great record-breaking Jersey cow, A. O. Auten, of Jerseyville, Ill., uses the United States Separator on his farm?

Also the owners of the wonderful $10,000 Guernsey cow

YESKA SUNBEAM,

the Rietbrock estate, of Helendale Farms at Athens, Wis., use four United States Separators on their farms.

TWILIGHT LONAN.

Chas. L. Hill, of Rosendale, Wis., owner of the celebrated Guernsey cow Twilight Lonan, uses a United States Cream Separator on his farm.

LORETTA D.

F. H. Scribner, of Rosendale, Wis., who developed the celebrated Jersey cow Loretta D., and who is one of the great Jersey breeders of the country, uses a United States Cream Separator.

If the **United States Separator** is the separator for these business men and thousands of others, leaders of the dairy world, **why not for you?** These experts—men who know, and do—require the use of a separator which **skims closest, washes easiest, runs easiest** and **wears longest.**

This is the reason they all choose the United States Separator. Send for Catalog No. **125** today.

The United States Separator holds World's Record, therefore is the **World's Standard** Separator.

Easy For The Boy

A LOUDEN LITTER CARRIER changes barn drudgery into child's play. With wonderful worm gear (an exclusive Louden feature) **1 pound pull on chain lifts 40 pounds in box**—boy can hoist half a ton. Raises and lowers any distance up to 25 feet. Stands where put; can't fall. Fill the box, raise it and give it a shove. It carries the load out of the barn to manure spreader or litter heap, wherever you want it; dumps load automatically and returns to you.

The Louden Way

Keeps barns clean and sanitary—Keeps cows healthy—they will give more and richer milk. Saves time, labor and money. **A Louden Litter Carrier** will save its cost many times in a year.

Loudens special electro-galvanizing process gives all Louden products a beautiful, lasting finish. Looks clean—easy to keep clean—never rusts—lasts much longer than ordinary hot process galvanizing.

Our 40 years experience in fitting barns is at your service for the asking. Hand your dealer a rough ground plan of your barn, and ask him to mail it to us for price. This will entail no obligation either on your part or the dealers. Don't accept any carriers but LOUDEN'S. There are none "just as good." Write us for complete catalog of barn equipment and valuable book on manure values.

LOUDEN MACHINERY CO., 651 Broadway, Fairfield, Iowa.

The Rusty Tin Can.

Mr. J. H. Monrad, of the New York Produce Review and American Creamery, writing from Denmark, says: "The Fuglevig Co-operative Creamery in Denmark has solved the question of rusty milk cans by buying some ten extra cans and loaning these to the patrons while their rusty cans are sent to be retinned at the expense of the creamery—the patrons. This puts it absolutely in the buttermaker's own hands to decide when a can needs retinning; he simply retains the defective can and gives the patron the loan of one of those belonging to the creamery. The expense in this case does not amount to more than 0.054 cent per 1,000 pounds of milk."

Making Butter Dangerous.

It is a good thing that farmers are able to use hand cream separators and ship their cream to cities to be sold as cream or to creameries to be made into butter. Dairy buttermaking, except on so large a scale as to be practically on a factory basis, is not advisable, and more than that, it is dangerous.

Under the law butter is considered adulterated if it contains above 16 per cent. of moisture. It is not only subject to condemnation, but the maker thereof is liable to be punished for making adulterated butter. This does not apply to farmers making little dabs of butter for home use or local sale, but we believe it does apply to all butter made for the interstate trade.

It is demonstrated time and again that it is not an easy matter for buttermakers at creameries to keep within 3 per cent. of the moisture they aim at. They hope to hit about 15½ safely, and to do so requires more skill than the average creamery buttermaker can boast of; therefore to be safe, he keeps down still lower, and for every point of moisture that is sacrificed the buttermaker loses the money that his stockholders are entitled to.

Even to ascertain the amount of moisture in butter after butter is made is not a simple farm operation, but rather a chemical process. There are several methods of testing which are not close enough to rely upon when the law makes a criminal of a buttermaker for one-tenth of one per cent. of surplus moisture, and when tests by the government experts do not always come within two per cent. variation. Then, again, averages do not count. If the butter varies from 15 to 16½ per cent. moisture and the average is 15¾, where it ought to be, the packages that contain above the legal limit are condemned and the maker thereof is prosecuted.

In our last issue we published a declaration on the part of the Commissioner of Internal Revenue that hereafter he would enforce the law more strictly. His idea is that in order to save themselves from prosecution the buttermakers should try to make butter containing 14 to 14½ per cent. moisture, and then there is sufficient margin to keep them out of jail; also, we presume, to protect themselves from the blunders incident to goverment inspection.

It is therefore very fortunate that the farm cream separator has reached such a high state of efficiency that the farmer can dispence with buttermaking altogether. The manufacture of butter on a large scale is just as much factory business as the making of cloth from wool or cotton, and every farmer who cannot make a good, permanent contract for the delivery of his whole milk to a city distributor should be sure to find sale for his cream output and use the skim milk on the farm.

Why DE LAVAL Cream Separators Are Best

De Laval the Logical Leader

It is not due to any mere stroke of luck or freak of circumstances that the De Laval Cream Separator has maintained first place in the esteem of cream producers ever since its invention in 1878. There is a reason for everything if we but know it, and there are many reasons why the De Laval is now and always has been the best cream separator.

De Laval the First Practical Separator

Dr. De Laval invented the first successful continuous cream separator because he had worked harder, was better informed, and knew more about the centrifugal separation of cream from milk than any other man who had attempted it.

Starting with this advantage the De Laval Company has maintained its lead in the improvement and development of the separator, step by step from year to year, because it has always had an organization better equipped in every way to build the best separator than any one or all of its would-be competitors combined.

World-wide De Laval Organization

The De Laval organization extends the world over, with a number of the finest and largest shops in the world in America, Sweden, Germany, France, Austria, Russia and other countries. Everyone of these shops is devoted solely to the building of separators. Their manufacture is not simply incidental to that of something else, as is the case on the part of every would-be competitor. No other separator shops compare with them in size, equipment or volume of production. They produce more separators in a day than any competitor in a week or most of them in a month.

De Laval Designers Most Experienced

The De Laval organization of separator scientists, experts, engineers, designers, practical manufacturers and skilled workmen of all classes, not only in one country but a half dozen, is unapproached by all would-be competitors combined. The De Laval Cream Separator as we know it today is the composite production of these men of many shops and many countries,the amalgamation of the longest and best separator experience in the world.

All Important Cream Separator Patents Controlled by De Laval Company

Moreover, the principal features devised in the construction and development of the De Laval machines have naturally been covered by patents, numbering several hundred in all, so that, however great their knowledge of De Laval machines, would-be competitors have been compelled to utilize means of construction which would avoid infringement of these patents, and thus forced to adopt less efficient and less desirable methods until certain De Laval patents had expired, by which time the construction covered by such patents had been discarded and abandoned or further improved in the course of De Laval progress.

De Laval Used Almost Exclusively by Creameries and Butter Factories

That, briefly, is why De Laval Cream Separators have maintained their supremacy, regardless of one competitor or another, increasing their sale year by year until their already nearly universal use in larger sizes by creameries, butter factories and milk stations is rapidly becoming as general in the farm and dairy likewise, and for the self-same reasons.

A De Laval catalog or any desired separator information will gladly be sent for the asking.

1016 Western Avenue **SEATTLE**

Although hundreds of thousands of farmers have bought cream separators in recent years and obtain satisfactory results from the use of them, not one in ten fully appreciates their true value. Before the day of cream separators, nearly every dairy farmer was a buttermaker, because the cities were small and whole milk did not have large sale; buttermaking to the extent of five, eight, ten to twenty pounds a day was the real farm burden and the cause of great dissatisfaction. Not one farm in a hundred was properly equipped for buttermaking, and the butter when made did not nearly bring the price of butter-fat, even at reduced prices of the past few months. Every farmer should own a centrifugal cream separator, for all other methods of separating the cream from the milk are by comparison useless and out of date.

Argentine Meats in Austria.

The first shipment of Argentine meat to Prague, the Capital of Bohemia, consisted of 55,000 pounds, and was sold under the supervision of the city. The next consignment will be disposed of by the regular butchers. The fat meat sold at 22 cents per 2.2 pounds, the forequarters at 29 cents. Including the duty of 6 cents, the meat cost 23 cents per 2.2 pounds. Where this meat is offered for sale there must be displayed in large letters a sign similar to this: "Sale of meat from Argentina." The meat must be kept apart from that of local origin.

Values of Different Cows.

"If a cow giving 175 pounds of butter in a year is worth $60, how much is a cow worth that gives 350 pounds of butter in a year? Suppose that butter will average 25 cents the year round, and it will do better, and that the feed is worth $40 for the year.

The first cow would give a return of $43.75, less $40 for feed, would leave a profit of $3.75, counting that the milk, calf and manure pay for the labor.

The second cow would give a return of $87.50 for butter and would give at least 4,000 pounds more of milk, which, at 20 cents per 100 pounds (and it is worth more for feed), would bring $8.00. The calf from the good cow is also worth more, but let that go. The return would be $95.50, less $40 for feed, or a profit of $55.50 on the same basis as the other cow made a profit of $3.75. It would take practically fifteen 175-pound cows to make as much profit as the one 350-pound cow. $3.75 is 6.2 per cent. on $60, and $55.50 is 6.2 per cent. on $895.16.

On the basis of percentage income, when the 175-pound cow is worth $50 the 350-pound cow is worth $895.16. The keeping of the cows should be looked at from the business standpoint. The poor cow is dear at any price, but the good cow is usually not rated at her real value."—North Dakota Agricultural College.

Shoo-Fly THE ANIMALS FRIEND

Keeps flies and all insects and pests off animals—in barn or pasture—longer than any imitation. Used and endorsed since 1851 by leading dairymen and farmers.

$1 worth saves $20.00 in milk and flesh on each cow in a single season. Cures sores, stops itching and prevents infection. Nothing better for galls. Kills flies and mites in poultry houses.

SEND $1, if your dealer can't supply you, for enough Shoo-Fly to protect 200 cows, and our 3-tube gravity sprayer without extra charge. *Money back if not satisfactory.* Write for Booklet, free. Special terms to agents.

Shoo-Fly Mfg. Co., Dept. 28, 1301 N. 10th St., Philada.

Editor knows from experience that Shoo-Fly is O. K.

SEED CORN.

GOLDEN ARROW—Distinct variety, prolific yielder, and all other standard varieties pure-bred and true to name.

Grow Rhubarb.

Rhubarb or pieplant can be grown in all parts of the state. It is splendid for sauce and pies and comes early in the season before any other fruit. It is easy to grow, easy to gather and easy to make into sauce or pie. Roots can be had from nurserymen and are cheap. Prepare a bed for it by plowing or spading the ground deep and fertilizing it with rotted manure. Into this set a few roots rather deep. Then keep the weeds and grass away from the plants to a distance of four feet. One planting will answer, as new stalks will come up year after year. All the attention the plant will need will be to keep the weeds away and to add some manure occasionally, and once in three or four years divide and reset the roots, the overcrowding of which tends to diminish the size of the stalks.—North Dakota Agricultural College.

Naked Snails or "Slugs."

Lettuce and other plants in the cold-frame, greenhouse or garden are sometimes troubled with these slimy creatures, which, by the way, are not insects in any stage, but snails without shells. The writer has killed them in his own cold-frame by sprinkling upon them with a sprinklin-can clear and quite weak lime-water, made by slaking a little quicklime, possibly two or three pounds in five gallons of water. This in no way injured the lettuce or impaired it for table use. Only the clear liquid was used, not the "milk of lime," and whenever it touched a snail the latter "gave up the ghost" immediately. The mere presence of this lime-water in the soil appeared to be disastrous to snails, and one or two applications were all that was necessary in the cases referred to.—F. L. Washburn, Division of Entomology, University Farm, St. Paul, Minn.

The Texas Stockman and Farmer says: "If you want land for a home, and if in a position to do so, buy it now. Remember that the Creator is not adding more acres, and population is increasing, and in consequence land values are going up."

THREE-YEAR SUBSCRIPTIONS.

Orders For The National Farmer and Stock Grower Solicited.

Kindly Sign the Blank Form Below and Become a Regular Subscriber.

We desire to invite attention to our three-year subscription proposition. We hope to obtain one hundred thousand additional subscriptions during the present year to continue for three years. It is practically a trial subscription and payable at the end of the first year. The subscription can be stopped at any time by paying for the period the paper is taken. This method of taking subscriptions is the invention of Uncle Piper, our subscription editor, who has g u a ranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for t h r e e years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper slips in a list of handy premiums for the subscriber to select one from, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

A Cabbage Growers' Instructor.

The home gardener, the market gardener and the truck farmer, each of whom contribute largely to the vegetable supply, is more or less interested in the growing of one of the most universally cultivated plants—the cabbage; and with its usual timely effort to supply the needs of all engaged in agriculture, the United States Department of Agriculture has recently issued a bulletin (Farmers' Bulletin No. 433) describing its cultivation under the different requirements of those three classes.

Although one of the coarser vegetables, cabbage finds a place in the home garden as well as in the market garden and the truck farm, and in some sections of the United States it is extensively grown as a farm crop. No adequate estimate, however, can be placed on the value of this crop, as it fluctuates very decidedly from year to year, both in acreage and price; but the output is large; the three states of New York, Pennsylvania and Virginia, which outrank all the others, grow commercially about 50,000 acres of this vegetable, either as a spring or autumn crop, in addition to the home-garden supply which is consumed at home.

Early cabbage is practically all consumed as a green vegetable; the late crop, on the other hand, is handled as a fresh vegetable, as a storage crop, and for the manufacture of sauerkraut. Cabbage is always in demand, and, under present conditions, is always on the market, either in the spring as the product of the Southern farm; in the fall and early winter from the Northern farm and market garden, or in the winter from the storage houses, where the surplus has been preserved for this demand.

A section of this bulletin is devoted to each of the three methods of producing the crop commercially—truck crop, market-garden crop and farm crop—and the influences of climate, extent of production, soil, fertilizer, seed, method of producing young plants, varieties, cultivation, enemies, harvesting and marketing, are described and explained under each head, in accordance with the light and knowledge gained from experiments and experience. The way to get a copy of this bulletin is to write to the Hon. Secretary of Agriculture, Washington, D. C., and request a copy of Farm Bulletin No. 433.

FARM AND RANCH LANDS.

ARKANSAS. — Fine Stock Farm. 887 acres, within 2½ miles of Warren, the county seat of Bradley county. Finest proposition in the state. Creek cuts land in middle. Five hundred acres in grass; level as a floor. Under fence. Price, $25.00 per acre. Terms to suit. **Jno. A. Culbreath & Co.,** Warren, Ark.

ARKANSAS.—The new corn country and best alfalfa lands in Little River county; 1,000 acres Red River land; finest stock and grain farm in this section at a bargain. Hogs and cattle raised here cheaper than elsewhere. Address, **W. R. Cavett,** Shreveport, La.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

WE GUARANTEE TO SELL YOUR FARM FOR CASH, no matter where located, within thirty days. Commission basis—no retaining fee—we get the money. Address,
PIONEER LAND CO., 6 Central Block, Decatur, Illinois.

STOCKMEN! RANCHES 1,000 TO 50,000 ACRES. We have some splendid Stock Ranches on the Isthmus of Tehuantepec, Mexico, where it is unnecessary to feed or house your stock six months of the year. You can buy these Ranches now at right prices on very liberal terms. Write to-day for our literature.
MEXICAN ISTHMUS LAND CO., Commerce Bldg., Kansas City, Mo.

FARMS FOR RENT OR SALE ON CROP payments. J. MULHALL, Sioux City, Ia.

SPLENDID CROPS

in Saskatchewan (Western Canada)

800 Bushels From 20 Acres

of wheat was the thresher's return from a Lloydminster farm in the season of 1910. Many fields in that as well as other districts yielded from 25 to 35 bushels of wheat to the acre. Other grains in proportion.

Large Profits

are thus derived from the FREE HOMESTEAD LANDS of Western Canada.

This excellent showing causes prices to advance. Land values should double in two years' time.

Grain growing, mixed farming, cattle raising and dairying are all profitable. Free Homesteads of 160 acres are to be had in the very best districts; 160-acre pre-emptions at $3.00 per acre within certain areas. Schools and churches in every settlement, climate unexcelled, soil the richest; wood, water and building material plentiful.

For low settlers' railway rates and illustrated pamphlet, "Last Best West," and other information, write to Sup't of Immig., Ottawa, Can., or Can. Gov't Agt. (52)

Canadian Government Agent, 125 West 9th St., Kansas City, Mo.
C. J. Broughton, 412 Merchants Loan & Trust Bldg., Chicago, Ill.

680 ACRES

Do you want to own a productive farm for a few years and then sell it for double its cost? I offer you the opportunity. There are 550 acres of creek bottom land, no overflow; 500 acres the best alfalfa land. The best corn, oats, wheat, bluegrass, timothy and red clover land. Abundance of all growing on the farm now. A clear, little running stream runs through the farm. Rock and gravel bottom; no mud or mire. 130 acres rough pasture land. Only about fifteen miles from Ft. Scott, Kas.; two miles to railroad station. Good six-room brick house; good, new barns for twenty horses, and other outbuildings. Good well at house, good well at barn lot, and spring branch in lot. Price only $60 an acre; easy terms. This farm in Lafayette or Saline county, Missouri, would sell for $200 an acre. It is worth just as much in Kansas.

3280 ACRES

I am offering the finest stock proposition on the Rock Island Railroad between St. Louis and Kansas City. Only a night's ride to Chicago. 50 per cent. tillable land, the other fine bluegrass land. 11½ miles new woven wire fence, white oak posts; new $5,000 residence; new $2,500 barn. Rock Island station and stock yards in center of the ranch. Will be worth $100 an acre in a few years. The finest water. Price $22.50 per acre. Easy terms.

J. H. LIPSCOMB, Kansas City, Missouri.
306 Fidelity Trust Bldg.

The United States Senate.

The following is a list of United States Senators, giving the states represented by each and the address while in Washington. This list is taken from the Congressional Record:

THE SENATE.

Hon. Atlee Pomerene, of Ohio. The Highlands.
Hon. Isidor Rayner, of Maryland. 1320 18th street.
Hon. James A. Reed, of Missouri. The Cairo.
Hon. Harry A. Richardson, of Delaware. The New Willard.
Hon. Elihu Root, of New York. 1155 16th street.
Hon. Benj. F. Shively, of Indiana. 117 Second street, N. E.
Hon. F. M. Simmons, of North Carolina. The New Ebbitt.
Hon. Ellison D. Smith, of South Carolina. The Normandie.
Hon. John Walter Smith, of Maryland. 330 Roland avenue, Baltimore.
Hon. Wm. A. Smith, of Michigan. 1100 16th street.
Hon. Reed Smoot, of Utah. 2521 Connecticut avenue.
Hon. Isaac Stephenson, of Wisconsin. The Shoreham.
Hon. Wm. J. Stone, of Missouri. 1921 S street.
Hon. Geo. Sutherland, of Utah. The Highlands.
Hon. Claude A. Swanson, of Virginia. 1414 16th street.
Hon. Robert L. Taylor, of Tennessee. Stoneleigh Court.
Hon. Joseph M. Terrell, of Georgia. The Cochran.
Hon. John R. Thornton, of Louisiana. The Cochran.
Hon. Benj. R. Tillman, of South Carolina. The Normandie.
Hon. Chas. E. Townsend, of Michigan. The Dewey.
Hon. Francis E. Warren, of Wyoming. The New Willard.
Hon. Clarence W. Watson, of West Virginia. The New Willard.
Hon. Geo. P. Wetmore, of Rhode Island. 1609 K street.
Hon. John Sharp Williams, of Mississippi. The Richmond.
Hon. John D. Works, of California. The Kenesaw.

Farm Products in the East.

New York City is to have a Land Show this year, November 3d to 12th, at Madison Square Garden. There will be some handsome premiums to compete for. It is to be called the American Land and Irrigation Exposition. Gilbert McClurg is General Manager, with offices at 149 Broadway, New York City.

The Wheat Market Situation.

Under the most favorable circumstances wheat growing in the United States has been conducted upon the narrowest of margins. It has been the favorite crop of the farmer, and as year by year passed with wheat at low prices, farmers refused to give it up for some other crop, simply because it was impossible of belief that the bread-making grain should always be grown at a narrow margin or at a loss to the grower.

Within the last twelve years there were six in which the average price of wheat was 77 cents, and six in which the average was $1.00 a bushel. The farmer paid the freight out of these prices, and yet they continued to raise wheat, although it produced less net returns than any other field crop.

As stated in our previous review of the wheat market, the shadow of the misnamed reciprocity treaty with Canada is over the market and depressing it. The scant population of Canada cannot consume the wheat raised there. The present duty paid on wheat admitted to this country is 25 cents per bushel, which has to be paid for the support of the United States government, or the wheat cannot come in. The so-called reciprocity treaty admits Canadian wheat free of duty, turning the surplus of Canada into this country without paying anything at all and competing with our own tax-paying farmers. This is likely to pass into law, and the cloud will be over the market until it is settled. Wheat is a world's crop, but whenever Canadian wheat comes in free of duty the Canadian crop will continually depress prices in this country, the same as if we raised excessive crops in the United States.

On the Chicago Board of Trade, May wheat option was quoted at 90⅝ cents a bushel on April 29th, 1911, against $1.08¼ cents a year ago, a practical loss in price of 18 cents a bushel. The July quotation was 88 cents, against $1.03¼ a year ago, and the September quotation was 87⅜ cents. Thus it appears that the people who trade in it consider the wheat market to be a weak proposition.

The Howard Watch

Officers of Uncle Sam's Navy carry the HOWARD Watch. In the shock of battle—through the fog and damp of sea voyages—the HOWARD has proved its fitness for the most exacting *service*.

The HOWARD is beyond all question the finest practical watch in the world—because of its construction and the precise HOWARD adjustment.

It is the only watch for any man who is critical about the *class* of things he owns.

Ever since 1842 it has been carried by more prominent Americans than any other watch.

Today you will find the HOWARD in the pockets of successful men in every walk of life—well-to-do farmers, stockmen, business, professional and technical men.

A HOWARD Watch is always worth what you pay for it.

The price of each watch—from the 17-jewel (*double roller*) in a Crescent or Boss gold-filled case at $40 to the 23-jewel in a 14 k solid gold case at $150—is *fixed* at the factory and a printed ticket attached.

Call on the HOWARD Jeweler in your town and talk with him. Not every jeweler can sell you a HOWARD. The jeweler who can is a good man to know.

Send us your name on a postal card and we will send you—FREE—our pamphlet, THE STORY OF EDWARD HOWARD AND THE FIRST AMERICAN WATCH. It is a chapter of History that every man and boy in this country should read.

E. HOWARD WATCH WORKS

Dept. No. 122, Boston, Mass.

High Cost of Living.

A Kansas City manicurist is suing a man for $15,000 for attempting to kiss her. Goodness knows how much she would have asked in case he had succeeded. The increased cost of the good things of life is getting to be something fierce.—St. Joseph Observer.

A Secret Out.

Musician (after much pressing)—"Well, all right, since you insist. What shall I play?"

Host—"Anything you like. It's only to annoy our neighbors."—London Opinion.

Sherwin-Williams Paints.

Be sure to obtain your paints from a reliable house. There is more trash called paint than anyone can imagine without experience. This admonition is worth something. Start right. First send for "The Book of Colors" and then decide on the paints you wish to buy. Address The Little Paint Man, care of Sherwin-Williams, 689 Canal Road, Cleveland, Ohio.

Don't Lose a Single Hog.

The simplest and cheapest is the best. Read about this panacea for hog troubles. You have heard about stock tonics and stock remedies and all kinds of surgical operations, serums and inoculations for hog cholera. But did you ever own a ten-cent can of "Merry War Lye," which is a fattener, health restorer and preventive? Read about it on page 6.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

It was reported on April 2d that Col. W. H. Phelps, of Carthage, Mo., had sold to P. E. Hannum, also of Carthage, his 675-acre farm, one of the best in Southwest Missouri, for $175,000. It is said it is the largest price paid for a farm in Jasper county. The improvements are valued at $75,000. Mr. Hannum, a wealthy mining man, bought the place for his son, P. E. Hannum, Jr., who will raise pure-bred Jersey cattle.

SEED CORN PREMIUMS.

Offered For the Fourth Year by The National Farmer and Stock Grower to Our Own Subscribers.

The National Farmer and Stock Grower originated the plan of corn improvement on farms by distributing small quantities of seed corn raised by champion corn growers and by offering additional awards when the corn grown therefrom wins prizes at State, Interstate and National Shows. We have originated about twenty-five thousand experimental corn breeding plots, from some of which county, state and interstate prizes have been won. The corn improvement originated by this paper has been so successful that it has contributed in no small degree towards the greatest corn crop ever grown — the crop of 1910.

Our Seed Corn For 1911.

We have again contracted for a special lot of seed corn grown by the grand champion of the world. He is now barred from competition because he has won so many grand prizes. His corn is Johnson County White, and the seed we offer was grown in his breeding blocks and is practically the same as the corn he exhibited. We refer to Mr. L. B. Clore, of Indiana. Mr. L. B. Clore has a son, Roy D. Clore, who grows his own, and with this very strain he won the grand championship prize at the National Corn Show which has just closed.

Four years ago we contracted with Mr. D. L. Pascal, the famous breeder of Reid's Yellow Dent Corn, whose original seed was purchased from the originator of this famous corn. Mr. Pascal has won many trophies, and corn grown from his seed has won many more. We regard it highly, and some very fine seed will be sent out this year.

Our Subscription Premiums.

Anyone who will send us Sixty Cents will receive The National Farmer and Stock Grower for one year and can select one pound of either corn as a subscription premium. Anyone sending us One Dollar will be credited with two-years' subscription and can select two pounds of either corn, or one pound of each, as a subscription premium. The corn will be sent by mail, prepaid, safe delivery guaranteed.

The Premiums We Will Pay.

At County Fairs or Corn Contests of 1911.—If any of our patrons grow corn from premium seed furnished by us from this advertisement and exhibit ten ears in regular classes, for every sweepstakes premium won we will pay Five Dollars; for every first premium, Three Dollars; for every second premium won, Two Dollars; and for every third premium, One Dollar. We have not heretofore offered County Fair prizes. These prizes hold good in every county in the United States, also at District Fairs.

At State, Interstate Fairs and at State Agricultural Corn Shows of 1911.—For every ten-ear championship premium won by our patrons from corn grown from seed sent out by us in response to this advertisement we will pay the exhibitor Fifty Dollars; for every first prize, Twenty-five Dollars; for every second prize, Ten Dollars; and for every third prize, Five Dollars.

At the National Corn Show, For Crop of 1911.—If any of our patrons receiving corn from us exhibit ten or more ears of corn grown therefrom at the National Corn Show, for every championship premium won we will pay One Hundred Dollars; for every first prize, Fifty Dollars; for every second prize, Twenty Dollars; and for every third prize, Ten Dollars.

Heavy Fence For Economy

WOVEN-WIRE FENCES must be heavy as they have to turn animals by sheer strength of the wire. A fence with barbs is protected from excessive pressure because the animal fears the barbs. Remove the barbs and the greatest strength of the animal is thrown upon the fence. Its wires must be larger and stronger. To have a long-life woven-wire fence the fence must be heavy.

AMERICAN FENCE

is a thoroughly galvanized square mesh fence of weight, strength and durability. Large wires are used and the whole fabric is woven together with the American hinged joint (patented)—the most substantial and flexible union possible. Both wires are positively locked and firmly held against side slip and yet are free to act like a hinge in yielding to pressure, returning quickly to place without bending or injuring the metal.

Dealers Everywhere—Stocks of American Fence are carried in every place where farm supplies are sold. The Fence is shipped to these points in carload lots, thereby securing the cheapest transportation, and the saving in freight thus made enables it to be sold at the lowest prices. Look for the American Fence dealer and get the substantial advantages he is enabled to offer. He is there to serve the purchaser in person, offer the variety of selection and save the buyer money in many ways.

FRANK BAACKES, Vice President and General Sales Agent

American Steel & Wire Company

Chicago New York Denver San Francisco

Send for copy of "American Fence News," profusely illustrated, devoted to the interests of farmers and showing how fence may be employed to enhance the earning power of a farm. Furnished free upon application.

Please mention National Farmer and Stock Grower.

Cattle-feeding Experiments.

There were thirty-six experiments with a total of 262 cattle, with comparison of results, year by year. This was at the Agricultural Experiment Station, Columbia, Mo., and the investigations were conducted under the supervision of Prof. F. B. Mumford, one of the foremost instructors in animal industry.

The bulletin is No. 90, and is entitled "Fattening Cattle on Blue Grass Pasture," being an investigation of the factors of age, condition, kind of ration and length of feeding period in beef production.

The cattle were yearlings, two-year-olds and three-year-olds; the experiments involved five-years' work. In addition to the blue grass pasture different lots were fed different rations. The gains in weight are shown with cost of each gain.

In the yearling classes the average cost of 100 pounds of gain was $7.017; in the two-year-old classes the cost per 100 pounds of gain was $6.971; and in the three-year-old classes the average cost of 100 pounds of gain was $8.335. This is based on corn at 40 cents a bushel, linseed meal at $28 per ton, cotton-seed meal at $24 per ton, gluten feed at $22 per ton, and blue-grass pasture at 75 cents per head per month.

Taking all ages together, the cattle fed shelled corn on blue-grass pasture cost the least per 100 pounds of gain, $7.867; the cattle fed shelled corn and gluten meal cost $8.068 for each 100 pounds of gain; the cattle fed shelled corn and cotton-seed meal cost $8.303 per 100 pounds of gain; and the cattle fed shelled corn and linseed meal cost $8.612 per 100 pounds of gain. In some of the experiments hogs followed the cattle, with result of about 14 pounds of pork to each 100 pounds of beef.

We advise our readers to write to the Director Agricultural Experiment Station, Columbia, Mo., for a copy of Bulletin No. 90.

Rubber Roofing

Warranted For Twenty-Five Years.

FREIGHT PAID To Any Station East of Rocky Mountains, except Texas, Colorado, New Mexico, N. Dakota, S. Dakota, Wyoming, Montana. Special prices to these states on request.

CENTURY MANUFACTURING COMPANY, Dept. 444, East St. Louis, Ills.

Our Drainage Problem.

The problem of drainage is one that concerns every state and territory in the Union. A United States officer has recently made some investigations of the wet lands and embodied them in a statement in which he goes quite fully into the situation.

He figures out that the area of what he terms permanent swamp lands is 52,000,000 acres. Evidently these permanent swamp lands are those so situated in relation to lakes and rivers that they can never be drained but must be used for other purposes than farming requiring a drained soil. For such lands we may yet be able to find profitable uses. For instance, it may be found possible to plant such lands with tamaracks or other like trees, which will grow with their feet in the water.

He estimates the area of lands that are periodically overflowed at 14,000,000 acres. It is difficult to know what to do with such lands. In some part they are along river edges, and no power of man can prevent the rise and fall of the rivers in accordance with the varying rainfall. Scientific agriculture will have to find out what plants or trees can be grown in such places. To some extent the cranberry can be utilized, but that is a northern plant and will not grow in the warmer portions of the country. Even in the North it can be made available only in certain favored localities.

There are over 6,000,000 acres of wet grass lands. These lands not only produce a small quantity of grass, but often it is of a poor quality. Draining will make it possible to grow the best kinds of grasses on such lands and get a bigger yield of any crop grown on them. The drainage of any of these acres will add a great deal to their earning value. If the earning capacity per acre is increased only $10 it means $60,000,000 increased annual profits.

There are over 4,700,000 acres of swamp lands that are wet only part of the time. These should be drained thoroughly, and much of this area can be used for various crops.

But the great item in his estimate is the 150,000,000 acres of land already being used but which is greatly in need of drainage. It is probable that all of this land can be drained effectively. In fact, the work is now being done in all parts of the country. However, many farmers are not yet awake to the necessity for the drainage of this land and need to have the matter often called to their attention.

The increased annual earning capacity of 150,000,000 acres of land improved by good drainage is what? The answer runs easily up to the billion-dollar mark.

A billion dollars extra put annually into the pockets of American farmers will do what? If rightly used, it will be the basis of an economic revolution in rural life that will be far-reaching in its effects.

Drainage of wet lands improves the health of the community. To what extent this is so we do not know, but it helps to banish malarial fevers and disease-spreading mosquitoes.

Cultivating Alfalfa.

"The foremost method of cultivating alfalfa is with the disk harrow, one of the most excellent farm implements ever invented. Alfalfa sown in the fall is almost invariably helped by disking the following spring, with the disks set quite straight, so as not to cut the crowns but to split them. It is usually well to follow this disking with a tooth harrow, with its teeth set straight. Occasionally in a dry summer the disk may be used to great advantage after the second, and possibly the third, cutting also. Many disk their alfalfa fields every spring, and some after each cutting; others do so only once in every two or three years, owing to weather conditions and the conditions of the alfalfa. In some instances the common harrow is used instead of a disk.

"The disking has several beneficial effects. It splits and spreads the crowns, causing more and consequently finer stems to spring up, affording hay of the most delightful quality easily cured; it loosens the soil about the crowns, conserves moisture and destroys the weeds. There need be no fear of killing the plants if the disks and the harrow teeth are set straight and weighted or otherwise adjusted to give direct and steady forward movement. As an implement for the cultivation and invigoration of an alfalfa field the disk harrow has no equal, and its frequent use is by those who know it best deemed quite indispensable."—From Coburn's "The Book of Alfalfa."

Protection of Seed Corn.

Corn, after being planted, is subject to the attacks of a few animals which cause loss to the farmer. Chief among these is the crow; and any treatment given the seed to protect it from the attacks of this bird will, at the same time, afford protection against a few insects which occasionally eat the seed, and also reduce the loss from striped squirrels, gophers and kindred four-footed creatures.

We have found white twine about the edges of a corn field, strung on high poles, and hung with strips of tin (one about every thirty feet), white rags, etc., to be an excellent device in keeping crows away from a planted field. If, in addition to this, a few dead crows are suspended from high poles in different parts of the field, the combination of white twine, bright tin shining in the sun, and the dead crows as a warning to would-be evil-doers, works so well that the farmer may rest assured it will be many days before his field is touched by these marauders. This remedy, or the twine alone, by the way, is in quite general use to-day.

Crows can be poisoned by dissolving 10-cents' worth of sulphate of strychnine in enough hot water to soak up two quarts of corn. This should be scattered about the field where crows are working, late in the evening, that they may find it there in the early morning.

If scarecrows are used, they should be changed occasionally. Forbush, in "Useful Birds and Their Protection," advises the use of a barrel hung on a leaning pole.

One of the safest and best ways of tarring corn, and yet not affecting its use in a planter, is one originating in Massachusetts: "Put one-fourth to one-half bushel of corn in a half-barrel tub; pour in a pailful of hot water, or as much as is necessary to well cover the corn; dip a stick in gas-tar, and stir this briskly in the corn; repeat until the corn is entirely black; pour off onto burlap (bran sacks are good); spread in the sun, and stir two or three times during the day. If this work is done in the morning, and the day is sunny, the corn will be ready for the planter the next day without any other care." A machine will easily handle corn treated in this way.

Deep planting, three or four inches, will, in some heavy soils, discourage the crow.

If one is a good enough shot with a rifle, and can pick off a crow or two at long range, the birds keep away from a field so protected. Even if not hit, they seem to realize it is dangerous ground. Any birds killed should be hung up in the field.

Crows are not always injurious. It is a well-known fact that at times they are of service in eating grubs and cutworms turned up by the plow.—F. L. Washburn, University Farm, St. Paul, Minn.

The United States Apple in England.

The United States Commercial Agent in London reports to the Bureau of Commerce and Labor that the apple is by far the most important fruit coming to the British market. American apples are very popular, led by such varieties as the Newtown Pippin and the Good River. The only objection urged is that of size. The most popular sizes are those ranging from 120 to 150 a crate, whereas some of the arrivals from Oregon and California run as large as 70 to 80 per crate. The English retail trade does not want the extra large apple. Fruit is sold by the pound, and the number of a fruit that can be contained in a fixed weight plays a large part in its sale.

Cold storage is attacked almost as much as if it were a crime to keep eggs in a cool place.

Sorghum cane seed is quoted wholesale at St. Louis at $1.50 to $1.65 per 100 pounds.

This DAIN Hay Loader and Side Delivery Rake

Will Save Your Dollars, Your Time and Your Hay

THIS is an age of specialization. The jack-of-all-trades is being outdistanced by the master-of-one. We have been specializing in hay tools for more than twenty-eight years. As a result **Great Dain Line** tools are superior, and most favorably known. More of them are sold than of any other kind of hay tools. In judging farm tools, you consider three things first of all: *efficiency*, *durability* and *simplicity*. These three features are cardinal points of the **Great Dain Line.** You'll find them prominent and effective in our Hay Loader and Side Delivery Rake.

Their *efficiency* is due to the application of correct mechanical principles by the inventor, Mr. Jos. Dain, and to painstaking construction. It gives you the assurance of successfully finishing any job that you undertake with the aid of these tools.

Their *durability* is the result of highest grade materials in connection with construction features that eliminate unnecessary working strain.

Their *simplicity* makes them easy to operate and dependable.

It takes courage to use costly materials in the face of cheap competition. Pretty paint can make an inferior machine look nice. But the high grade material, careful workmanship and quality features built *into* **Dain** machines keep them in the field in splendid working condition, long after the oheaply made machine has gone to the scrap heap. ***To build strong, substantial machines that will stand the wear and tear of hard use—season in and season out—is a religion with us.*** Be on the safe side, select a hay tool made by a hay tool specialists. When you see the name **Dain** on a hay tool you take no chances—our reputation of twenty-eight years experience is *back of that name.*

The Great Dain Hay Loader

Requires no one on the load but the driver. It pushes the hay well forward where it can be easily handled. No return carrier to drag the hay back to the ground. By dynamometer test, this loader has proven to be the **lighest draft** loader on the market. The ground is practically raked twice by the **Dain** as it is geared so every revolution of the rake over-laps the one preceding. It's the **simplest loader** made—no long crooked crank shaft, no drum cylinder, no return carrier or ropes to rot, no twisted chains, no cams, or superfluous freak mechanism to get out of kelter and cause delay. Gently removes hay from swath or windrow. Takes the hay from the low places—passes gently over bumps and other obstructions and reaches into every hollow. These are a few of the reasons why there are more **Dain Hay Loaders** sold every year than any other kind.

The Great Dain Side Delivery Rake

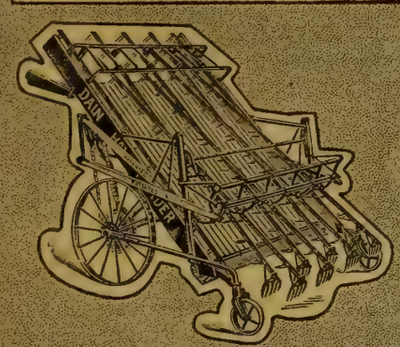
To make top-priced, air cured hay, one should have a **Dain Side Delivery Rake.** No matter how heavy or how light the hay, this rake can be easily adjusted to deliver it in fluffy loose windrows where every wisp is exposed to the air and quickly dried without sun scorching and bleaching. **Air cured hay** is sweetest, has best color, and **brings the highest price.** If your hay should be rained upon, simply turn it over with this rake—it's a rake and tedder in one. Three sets of slowly revolving rake teeth get all the hay and turn it into loose, continuous windrows so gently that scracely a leaf is broken off. Cushion springs take up the jar when driving over rough ground. This rake used in connection with the **Dain Loader,** affords the quickest, best way of curing hay and getting it out of the field.

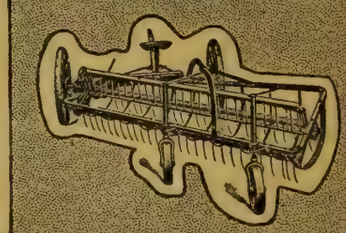
Special Features of the Hay Loader

No long crooked crank shaft; is operated by swinging pitmans. Patented hinged board at bottom to turn up for windrow. Hinged tongue for coupling with any height wagon. Geared to insure greatest hay gathering efficiency. Height of rakes can be regulated. Hinged apron guides hay to load and prevent blowing off. Caster wheels insure lightest draft and make turning easy.

Special Side Delivery Rake Features

Teeth move with gentle motion; harmless to tender products. Rakes clean without gathering trash. Steel construction throughout makes it practically indestructible. All jars absorbed by cushion springs. Easy regulation of bevel gears. Easily adjusted to handle light or heavy hay.





Learn more about this **Dain Loader** and **Side Delivery Rake**—also about the **Dain Vertical Lift Mower**—the seven styles of **Stackers**—the five styles of **Sweep Rakes** and **Dain Presses.** All **Great Dain** tools have features that unquestionably save hay growers time, labor and money. Consult the nearest **Dain Dealer,** also write us in what hay tools you are interested, and receive full description, together a free copy of "*All About Hay*" the most interesting and practical book ever published about hay. ***Write today.***

WESTERN

RANGE HORSE SALES.

Horse raisers are advised that sales will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,

As usual, during the season of 1911. The First Sale will probably be held

THURSDAY, JUNE 15,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

J. J. SEARCY, Sale Manager,

NATIONAL STOCK YARDS, ILL.

Sales at Cook Farms, Lexington, Ky.

The recent sales at the Cook Farms include the four-year-old stallion Merrymount, 3,062, to Mr. Jesse Mason, of Big Bend, W. Va. This is the third stallion that Mr. Mason has bought from the Cook Farms in the last seven years, and each have proved great money makers for him. Another good stallion was the four-year-old Chestnut McDonald, 4,304, one of the greatest sons of Star McDonald, to Mr. Dean Blythe, of Monticello, Ark. Mr. Blythe spent a week in Kentucky and visited most of the saddle-horse farms in the Blue Grass; to Mr. C. W. Strawhorn, of Greenwood, S. C., the four-year-old saddle stallion Alta Chief, 4,750, by Emerald Chief; to Mr. John R. Gibson, of Sherrill, Ark., Harold Chief, 3,050, by Bourbon Chief, 976; to Mr. R. B. Redwine, of Monroe, N. C., the saddle stallion Honey Boy, by Montgomery Chief, 1,361; to Mr. John B. Stewart, of Lexington, Ky., the trotting stallion Fleming Pride, 49,793, by Jay McGregor, 37,692; to Mr. Corrigan, of New York City, the pacing stallion Jay W., 45,751, record 2:13¼, trail 2:08¾, by Jay McGregor, 37,692; the six-year-old imported jack Lazaro, 1,482, to Mr. G. N. Griffith, of Shelby county, Kentucky; Bourbon King, a six-year-old jack of the Kentucky mammoth breed, to Mr. T. R. Cantrill, of Lead Hill, Ark. Mr. Cantrill bought this jack after visiting the big jack farms around Sedalia, Mo. Hamburg Boy, a three-year-old jack, to Mr. Jas. T. Anderson, of Marietta, Ga.; Black Bird, Jr., a three-year-old jack, to Mr. Jose G. Martinez, of Etzatlan, Mexico; Mammoth King, a three-year-old jack, to Mr. J. A. Ward, of Winfield, Ala.; Cook's Cumberland, a three-year-old jack, to W. H. Frith & Co.,of Bunkie, La.; Hamburg, 2d, a three-year-old jack, to the Midway Live Stock Co., of Midway, Ala. See the Cook Farm Jack and Stallion Advertisement on page 20.

The Wool Market Prospect.

Messrs. A. J. Child & Sons report a dull wool movement, but they are sending out their 1911 Wool Circular, which is always interesting to those having wool to ship. Whenever there is any sign of life in the trade this firm is about the first to catch on and take advantage of it.

CARDON, 51,850 (71,229)—Brown black imported Percheron stallion; weight in ordinary flesh, 1,970 pounds; 17 hands high. Highly bred, remarkable conformation and well acclimated. This horse is at head of Walker Bros.' Home Farm herd and will stand this year at Fair Grounds, Oklahoma City. For terms write them at Oklahoma City. See advt.

Messrs. A. J. Child & Sons, 511 North Main street, St. Louis, Mo., sell strictly on commission, and have been in business in St. Louis since 1874.

Restrictions in Selling Lambs.

The United States Bureau of Animal Industry has forbidden the practice of "plating" in selling lambs. It has been the custom for retailers to take the spare fat from sheep and place it on the carcasses of thin lambs where it would sell as lamb. The retailers complain that that this caul fat brings but three or four cents a pound if sold for suet, but when skewered to the outside of the carcass it brings the price of lamb, which is eight or ten cents a pound. It also improves the sale of the lamb which is deficient in fats.

The Top-price Shorn Lambs.

On April 10th, at Chicago, Messrs. Clay, Robinson & Co. sold on account of John Blanchard, of Columbus, Wis., 431 head of shorn lambs, which averaged 70 pounds, and sold for $6.15 per 100 pounds. The price was 30 cents per 100 pounds higher than any other shorn lambs sold for on that day and within 20 cents of the top for lambs sold on that day with the wool on. One feature of the transaction is that Messrs. Clay, Robinson & Co. bought these lambs in market as feeders for Mr. Blanchard.

The Monday and Tuesday Auctions.

The firm of Holland, Nugent & Maxwell Bros. can justly claim to be selling the largest number of horses and mules at auction of any firm in the world. They keep a red-hot auction going the first two days of each week, which is conducted personally by Mr. T. H. Holland. After selling about five hundred horses on the first of May auction very largely at $150 to $225 and with a few special draft horses at $250 to $330, Mr. Holland said: "We have an opening here for a few more conservative horse shippers who can stand a little more prosperity than they can obtain at either Omaha, Kansas City or Chicago. The market here has more active demands than all the others combined." The mule salesmen of this firm are Lan Morris and Ed Conway, acknowledged to be the best mule salesmen of the business. Receipts of horses and mules at the yards so far this year are 77,000 head, and Holland, Nugent & Maxwell Bros. sold the big end of them. Address the firm at National Stock Yards, Ill.

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presence adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, Nation Stock Yards, Ill.

FOUR BIG PAPERS 80 CENTS.

The National Farmer and Stock Grower; Twice-A-Week Republic of St. Louis, the best semi-weekly in the Southwest; Farm Progress, the biggest semi-monthly farm paper printed; and Woman's World, a monthly woman's paper, sent to any address, a year, for only 80 cents. Regular subscription price, $1.50—bargain price, 80 cents. Send orders to the **St. Louis Republic, St. Louis.**

One barrel of sixteen-pound watermelons arrived on the St. Louis market from Florida, May 2d, and sold at the complimentary price of $1.00 per melon.

Ask Your Neighbor.

Many of your neighbors have used Bodi-Tone on its 25-day-trial-plan, for thousands in every state of the Union have tested it in this way. Ask them what they know about it; ask them how it cures. Read the trial offer on the last page of this issue.

Sheep Export Reviving.

British purchases of sheep and lambs from the United States are again active. For the first three months of 1911 such imports numbered 21,446, valued at $150,000, against none for the same period last year. It will be seen from this that exports increase as prices go lower.

DON'T WEAR A TRUSS

FOR

RUPTURE

Let Me Send You A

Brooks' Appliance

ON

Free Trial

Brooks' Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb. It absolutely holds firmly and comfortably and never slips: always light and cool and conforms to every movement of the body without chafing or hurting. **I make it to your measure and send it to you on a strict guarantee of satisfaction; and I have put my price so low that anybody, rich or poor can buy it. Remember, I make it to your order—send it to you—you wear it—and if it doesn't satisfy you, you send it back to me and it will not cost you one cent.** The banks or any responsible citizen in Marshall will tell you that is the way I do business—always absolutely on the square, and I have sold to thousands of people this way for the past five years. I use no salves, no harness, no lies, no fakes. I just give you a straight business deal at a reasonable price.

Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE, and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

Evans-Montague Commission Company

P. O. Box 68,
NATIONAL STOCK YARDS, ILL.

VETERINARY INSTRUMENTS (Trocars, Hopples, Impregnators) for Horses, Cattle, Swine, Poultry, Etc. Received Only Award World's Fairs, Chicago, St. Louis. Write for Illustrated Catalogue.
HAUSSMANN & DUNN CO., 708 So. Clark St., Chicago.

Bog Spavin

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure (Liquid)

is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other. Doesn't imitate and can't be imitated. Easy to use, only a little required, and your money back if it ever fails.

Fleming's Vest-Pocket Veterinary Adviser

describes and illustrates all kinds of blemishes and tells you how to treat them. Covers over 200 veterinary subjects. 192 pages, 69 illustrations. Write for a free copy. (5)

FLEMING BROS., Chemists,
218 Union Stock Yards, Chicago, Ill.

Good Hog Sale at Fort Worth.

On April 13th, at Fort Worth, Texas, Mr. J. W. Lewis, of Tecumseh, Pottawatomie county, Oklahoma, had a load of cross-bred Berkshire-Poland-China hogs on the market which averaged eleven months old, weighed 285 pounds, and were sold by Clay, Robinson & Co. for $6.45, which was 25 cents per 100 pounds higher than any other hogs sold for on that day. Mr. Lewis considers a cross of the two breeds makes a thrifty, early-maturing hog, and his ration is corn and alfalfa.

Not a Patent Medicine.

Bodi-Tone, the tablet medicine which is becoming so popular through its cures, is not a patent medicine. Its ingredients are not a secret. It contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Such ingredients guarantee its merit. Read the trial offer on last page.

A Word For the Mule.

In a bulletin entitled "The Cost of Horse Labor," issued by the Minnesota Department of Agriculture, there is a picture of a span of mules and the following to say about them:

"A span of mules fourteen years old, owned by the Minnesota Experiment Station. The team weighs about 2,200 pounds, and it is claimed that they are the toughest team on the farm. They refuse to eat more than about one-half as much feed as horses doing the same amount of work. Many farmers are using mules almost exclusively, and claim they can get their work done more cheaply than with horses. Some people object to mules on 'general principles,' but it is nevertheless a fact that they possess qualities well worthy of consideration by the breeder or farm manager. Their comparatively small food consumption and long life, resulting in low depreciation, makes the annual cost of maintenance lower than for horses."

Buying Stock Cattle and Feeders.

The firm of Clay, Robinson & Co. is doing magnificent service for live stock shippers at all markets, and particularly at the National Stock Yards, East St. Louis. A recent acquisition to their staff on said market is Mr. F. W. Lane, whose specialty is buying stock cattle and

MR. F. W. LANE,
Stock Cattle and Feeder Buying Specialist, with CLAY, ROBINSON & CO., at the St. Louis National Stock Yards.

feeders on orders. Mr. Lane entered the market about two years ago from Springfield, Ill., and has developed remarkable judgment, skill and ability in his chosen field of operations. His services have been obtained in behalf of their customers by Clay, Robinson & Co.

How Old is Your Horse?

There are four ways to tell the age of a horse, according to Prof. E. L. Potter, of the Oregon Agricultural College at Corvallis, Ore.: By his teeth, by his ribs, by the flesh on his tail and by the skin on his cheeks.

In a young horse the cheek skin is soft and elastic, and flies back quickly when raised. In an old one it is lifeless, and goes back but slowly.

Old horses apparently have a wider and more distinct space between their ribs than young ones. And with age the flesh on the tail of a horse shrinks, making the joints more distinct than they are on a young horse.

Judging by the changes in the teeth is a more accurate method. The coming of the temporary teeth first and then the permanent ones; the development to maturity; the change in shape on account of wear; the coming of the dips in the teeth and their wearing away afterward; and the change in the angle of meeting of the teeth, from straight together at five years to a sharp angle at twenty—all these are signs by which the experienced horseman can read accurately the age of a horse.

"It must be remembered that the permanent teeth, above and below, come in at the same time," says Prof. Potter, "but the cups above do not wear away until all the cups below are gone. It must also be remembered that the changes begin at the center and continue at the rate of one pair a year; that a horse at maturity, which is at five years, has everything; that is, all his permanent teeth and all the cups. If one remembers this much he has the whole thing in a nutshell."

Western Range Horses.

We are again authorized to announce that Campbell & Reid and Western Sale Stables Company will hold their sales of range horses and mules as usual during the season of 1911. The first sale will probably be held in the middle of June, depending upon condition of the offerings. Ranchmen who will have stock for sale will find it to their advantage to consign to these sales, because they are the best-conducted and the farmers and dealers look to them for supplies. Usually from 1,200 to 2,000 horses and mules are offered and sold with ample competition for all the offerings. St. Louis is the best market for range horses, and the only market that can realize their full value. For further particulars address J. J. Searcy, Manager, National Stock Yards, Ill.

Horse and Mule Notes.

At the port of New York, in the eight months ending March 6th, 1911, a total of 2,900 draft horses were imported. These included 1,923 Percherons, 14 French Draft, 726 Belgians, 215 Shires and 22 Suffolk Punch.

The Horse Department of the Minnesota State Fair is authorized to increase the horse premiums of 1911 to a total of $11,000. This is an increase of $3,714 over the total awards of last year.

It is reported that the government is buying horses at Redmond, state of Washington, for shipment to the island of Guam, where there is to be established another horse-breeding farm.

Included in New York horse sales during the month of April were a pair of cobs and a high-stepper, sold by Eugene von Bach, of the Knickerbocker Stables, by telegraphic correspondence, to Mr. Walter Sharp, of Seattle, state of Washington. The horses were shipped 3,500 miles by express, so as to be in time to be exhibited at the Vancouver Horse Show.

The New York Herald reported that Mr. S. W. Stein, head of the firm of A. M. Stein & Co., Brooklyn horse dealers, had arrived from one of his trips to Ohio, and that a load of draft horses brought in by him in April averaged 1,900 pounds each.

A Gold Brick For Farmers.

In the debate on the misnamed farmers' free list Representative Mondell, of Montana, declared that the measure was a bare-faced attempt to gold-brick the farmers of the United States."

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Vve., St. Louis, Mo.**

Hens From China.

A. Warren Robinson, in the Petaluma Poultry Journal, mentions a retired sea captain who has during a long and eventful life roved the seas over, in all climes,. For years he was taking ships from Boston to China and India and neighboring countries. On one of his return trips he bought at Hong Kong, for a mere song, three dozen or more fowls, which should take the place of fresh meats, during the latter part of the long voyage. He arrived in Boston with fourteen hens still in the coop. These he took to his country home and gave them coveted liberty. For one thing, the way they ate the green grass on the lawn was a caution.

Only a week or two elapsed before another voyage to the Far East was undertaken and the Chinese hens were shipped again as first-class sailors. During that voyage of four months these fourteen hens laid six hundred and seventy-two eggs in four-months' time. This the captain thought a splendid record. The hens were of the common riff-raff found in the seaports of China, quite bulky in body with short legs. But they had the reputation of being good layers, and they averaged twelve eggs per month during the voyage.

How to Detect Bad Eggs.

The following is by A. G. Phillips, Associate in Poultry Husbandry of the Purdue Agricultural Experiment Station of Indiana, and it indicates what the buyer must do when he receives cases of eggs bought here and there through the country:

Candling Eggs.

The method used for this selection of eggs is called "Candling" or "Testing." The "egg candle" or "tester" is made of wood or metal, and, as a rule, is kept in a dark room. A light inside the tester shines through an opening, in front of which an egg is held by the candler. By a quick movement of the hand the condition of the contents of the eggs are quickly noted and the egg is placed in its proper class. A good candler works rapidly and will test a large number of eggs in a day.

Grading Eggs.

Eggs are sometimes graded as follows:

Extras. — Weight twenty-six to twenty-eight ounces to the dozen, naturally, and absolutely clean, fresh and sound, same color. (A grade seldom used.)

Firsts. — Weight twenty-four to twenty-five and three-quarter ounces to the dozen, sound, fresh and reasonably clean.

Seconds.—Shrunken, stale, washed, stained and dirty.

Checks.—Cracked, not leaking.

Rots. — Incubator, blood rings, dead germs and decomposed eggs.

All eggs should be bought and sold on this grading system, so that an egg will bring what it is worth.

Description of Egg Contents.

When the candler tests the eggs he bases his judgment on the following indications:

Fresh.—Opaque. appearing almost entirely free from any contents, sometimes dim outline of yolk visible, air cell very small.

Stale.—Outline of yolk plainly visible, sometimes muddy in appearance, air cell very large.

Developed Germ.—Dark spot visible, from which radiate light-colored blood vessels.

Dead Germ.—Dark spot attached to shell, or red ring of blood visible.

Rotten.—Muddy or very dark in appearance, yolk and white mixed, air cell large and sometimes movable.

Cracked.—White lines, showing irregularity in shell.

Testing as above suggested will aid one in determining absolultely the quality of the eggs, not only for marketing but for incubation. The farmer should demand that his eggs be bought upon the test. The buyer should co-operate with farmers and meet such demands by buying "loss off."

Recent changes in the Pure Food law make it unlawful to sell or offer for sale eggs which are putrid, decomposed, rotten or unfit for food. The only way to obey this law is to sell eggs upon the grade.

Poultry Notes.

Whenever eggs are sold by the pound it will be found that the pound that contains the largest number of eggs will sell for the most money.

"A male bird is not necessary for the production of eggs, hence should be removed from the flock at the end of each breeding season, in order to insure infertile eggs. Infertile eggs keep better and are very desirable upon the market."—A. G. Phillips, of Indiana Experiment Station.

"Look out for rats. At the very first signs of them take measures to kill them off. By all means own a good fox terrier. Get a pup and train him daily in the chicken yard and you will find that he will develop into a priceless treasure." —A. Warren Robinson, in Petaluma Poultry Journal.

According to F. E. Benedict, in the American Poultry World, the demand for day-old chicks this year will largely exceed the supply. Some of the firms engaged in the business ship tens of thousands in a season.

The New York Produce Review and American Creamery says: "The people of the Delaware Valley, in the vicinity of Narrowsburg, Pa., on both the Pennsylvania and New York sides of the river for several miles above and below the town, are extensively engaged in the chicken business. They raise White Leghorns to furnish white eggs for the New York market.

Notwithstanding all the chatter about Indian Runner ducks, Mr. S. B. Twining, who raises 20,000 to 25,000 ducks yearly, has Imperial Pekins, and claims them to be the earliest and largest layers, easily confined by a two-foot fence,the cheapest duck to raise and the best table duck.

Mr. John Wildig, of Indiana, reported to the Poultry Standard an average of 183½ eggs per hen per year from twenty-eight pullets. They were White Wyandottes. The pullets were hatched in March and April and the laying record was commenced October 1st and continued until the following September 30th.

In the Poultry Department of the Wisconsin College of Agriculture the students had charge of fifteen incubators and about ten dozen eggs to the incubator. The average number of chicks hatched out was 75 per cent.

Our Customs Officers.

Sir Frank Newnes, the English publisher, was asked at a dinner in New York what he thought of the customs ordeal at the New York port. "Oh," he said, "the officers were very polite."

"But didn't they bother you with questions?"

"No, they didn't bother me. They were too polite for that. But they did, undoubtedly, ask a lot of questions. They made me think of the Devon farmer.

" 'My curiosity is running away with me,' said the Devon farmer, as his two-headed ram dragged him all over the barnyard."

Can *you* make 25% on *your* investment?

Farmers are doing this to-day in the

Arkansas Valley

of Colorado—Kansas

Why should *you* be satisfied with less?

Corn farmers rarely make 5 per cent net. Alfalfa growers often make 30 per cent net in this wonderful valley.

I know one man who last year refused $75,000 for his alfalfa hay (in stack) from 1,800 acres.

The small grower does as well, or better.

There is no element of uncertainty.

The soil is there.

The climate is there.

The water for irrigation always is available.

Just think — reservoirs 60 miles in circumference and 90 feet deep. Canals so located that every acre may be quickly and economically watered. Drops, headgates, etc., solidly built of reinforced concrete.

This land is a rare bargain at $75 to $150 per acre, the prices now asked.

The Arkansas Valley is a desirable place for a home. Climate pleasant and healthful. Social conditions unsurpassed. Good schools, good towns, good markets, good roads, churches, clubs, etc. The Santa Fe furnishes fine transportation facilities to world markets.

Buy an Arkansas Valley farm. Forty acres gives a splendid start.

Develop it, raise alfalfa, sugar-beets, grain and melons. You will prosper — your profits will enable you to get more land, and with every additional acre your independence becomes more secure.

I want you to read our book-folder, describing this Valley. It is full of the information you are most anxious to get. It will be sent to you free, on request.

C. L. SEAGRAVES, General Colonization Agent, A. T. & S. F. Ry.,
1953 Railway Exchange, Chicago.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

☞ Prices Reduced For Balance of Season.

Your Name Will Get $2 Eggs

For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. KIRKWOOD, St. Louis County, MO.

HARDY, EVER-BLOOMING ROSES.

The Most Delightful Subscription Premium Offered by a Farm Paper.

The National Farmer and Stock Grower has again decided to send out a collection of eight choice ever-blooming Rose Plants to our patrons who will send in a special subscription.

The Collection of Roses.

The collection consists of **Rhea Reid**, one that received the gold medal at the National Rose Society. The flowers are rich velvety red. Another one is **The Bride**, one that will thrive under most unfavorable conditions. The flowers are the purest ivory white. **Etoile de Lyon** is the most magnificent pure yellow rose, massive in size and beautiful in every stage of development. **Bridesmaid** starts with the first warm days of spring and requires but little care. The flowers are an exquisite clear pink, beautiful in form and highly fragrant. The **Papa Gontier** rose is a grand variety for outdoor planting, producing double flowers of clear, glowing crimson, and blooms from June to late in the year. **Bessie Brown** is a charming, pure snow-white rose. The flowers are very large, and it blooms profusely. **Champion of the World** is a rich, ivory pink, and without it no garden selection is complete. It is unequaled for size of flower, fragrance or beauty. **Crimson Rambler**, the last of the collection, is a bright crimson flower that covers the whole bush. It is valuable for decorative hedges, arches and screens. We cannot describe this beautiful collection, but we will guarantee them to please any lover of flowers.

OUR SPECIAL OFFER.

Send Us Sixty Cents. We will send you The National Farmer and Stock Grower for one year. We will send you direct by mail, postpaid, the full set of eight hardy, ever-blooming Roses. We will also send you a 16x20-inch picture entitled **"The American Beauty Rose."** The picture is most beautiful. There is a great bunch of roses resting on the white linen cloth of a table. It is glorious, magnificent. **Send Us Sixty Cents.** The paper can go to one address, the picture to another and the roses to another, or all three to one address.

ANOTHER SPECIAL OFFER.

We publish the Universal Magazine. It is a splendid publication, issued monthly. There are thirty-two pages, three columns to the page, illustrated stories, special articles, poetry, embroidery, patterns, etc. The subscription price is 25 cents a year. Send us Fifty Cents and we will send you the Universal Magazine for two years. We will also send you the full set of eight hardy, ever-blooming roses as a premium. The rose plants will be sent prepaid by mail. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Pure-bred Sire League Promotes Good Breeding.

The Pure-bred Sire League, a national organization having for its purpose the improvement of the live stock of the state and the nation by the use of pure-bred, registered sires in the place of those of grade, mongrel or scrub breeding, has been inaugurated in Wisconsin. Any owner or user of a pure-bred sire of any class of farm live stock may become a member without payment of fees or formal nomination. This non-incorporated league is a purely voluntary organization to promote the improvement of farm live stock by a general campaign.

Upon joining the league, each member pledges himself (1) to use only pure-bred, registered sires in the production of farm animals, so far as possible; (2) to advocate the general use of such sires; (3) to work for the betterment of pure-bred sires in breed character, individual excellence, quality, size, soundness and prepotence; (4) to discourage the use of grade, mongrel or scrub sires and all sires and dams, irrespective of breeding, that are diseased, hereditarily unsound, physically unfit or undesirable in conformation and character. Each member will be expected to print this pledge on the back of his business cards, distribute these widely and discuss the matter with his patrons and neighbors.

The members of the league will be distinguished by a small button issued for each section of the league and bearing the name of the state and the inscription: "Pure-bred Sire League."

The object of this organization, which was originated by Prof. A. S. Alexander, of the College of Agriculture of the University of Wisconsin, is to combine stockmen in a state and national campaign for the improvement of the live stock industry by the general use of pure-bred sires. Wisconsin owners of pure-bred stock will be asked to join the league, urge others to become members and earnestly advocate the adoption of its platform principles here and throughout the country. It is hoped that sections of the league will be formed as soon as possible in the other states.

Paints and Painting.

Of the various classes of paints—as tar, varnish or resin, and oil paints—the last are the most extensively used, and in the majority of cases afford the best protection.

The wearing quality of a paint, and its protecting power, are due more to the pigment than to the oil. With a pigment ground in oil, the finer the pigment the longer it will wear; but it will dry more slowly. A layer of paint is about three times as thick as a layer of linseed oil; hence, for this and other reasons a paint affords better protection than oil.

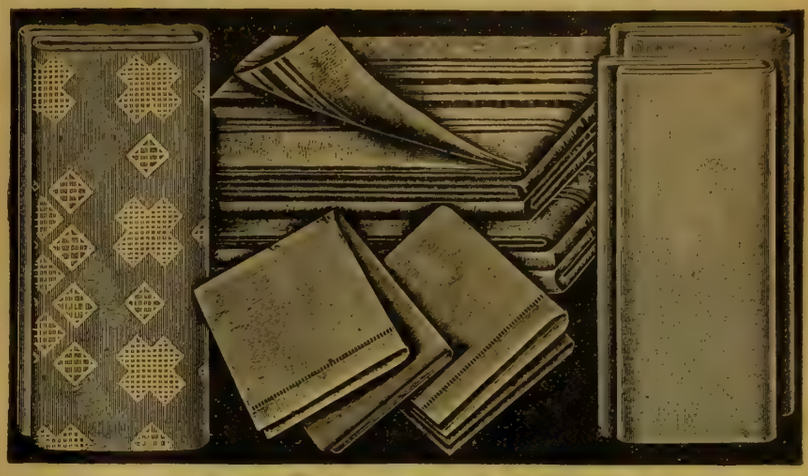
Paint should be applied only to a clean and dry surface. Moisture under a paint causes it to blister when exposed to the sun; also moisture between coats has the same effect. On old painted sufaces the paint should be removed or rubbed down smooth before applying new paint. In some cases a careful removal of blisters is sufficient, but the surface should be free from dust and dirt. In case of the removal of paint by a solution of caustic alkali, the surface must be thoroughly washed to remove traces of alkali, and carefully dried, before painting.

Iron or steel surfaces should be carefully cleaned, by means of a steel wire brush and emery paper, to insure the removal of all rust before painting.

Paint generally should be applied with a good round brush and well rubbed out. The rubbing out serves to remove any bubbles of air, also the film of air found on all surfaces and it insures a thorough incorporation of the paint with the surface, thus affording better protection. The rusting of farm machinery is no doubt largely due to the fact that it is "painted" by the dipping process. Air bubbles causing openings in the paint film, moisture enters and rusting begins; also, the paint not being well brushed out, is easily removed mechanically.

In the case of ready-mixed paints, it is generally found that the pigment has largely settled to the bottom of the can. In preparing the paint for use, the liquid portion—oil and dryer—is poured off a clean can, the pigment and the small amount of the oil remaining in the bottom are thoroughly worked up and mixed by means of a strong, short stick. When the pigment is thoroughly loosened from bottom and sides of the can, the fluid portion removed is added from time to time until the paint is uniformly mixed. Paint should be kept in cans having air-tight covers. After using, brushes should be cleaned with benzine or turpentine, and should not be left in the paint.—G. W. Walker, University Farm, St. Paul, Minn.

Free! To Every Lady Reader This Beautiful and Durable 7-PIECE BED SET



Consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 Bed Spread—All Full Size Pieces

Here is an opportunity whereby every woman in the United States can get this useful, expensive, 7-Piece Bed Set, **Absolutely Free.** This Bed Set consists of 2 Blankets, 2 Bleached Sheets, 2 Bleached Pillow Cases and 1 large White Bed Spread—7 full size pieces in all. Nashville, Tenn., Sta. B, R. F. D. No. 7.

FARM ACCOUNT BOOK

Offered as a Subscription Premium With The National Farmer and Stock Grower.

Nothing contributes more to the success of the farm than the habit of keeping records and accounts. On many large farms proper accounts are kept with the same system and regularity that bankers and merchants keep their books. The consequence is that all such farms are conducted upon business principles, and the record of former years is a help, guide and reference of considerable value.

On smaller farms there is often no systematic book-keeping, not even a monthly account of money received and money expended and showing the balance on hand. This unsatisfactory failure to keep records results in disputes, trouble and disaster. A firm in Iowa has bound under one flexible cover a Farm Record and Account Book which is designed to enable the farmer to keep a satisfactory record. It has an inventory page, an income account for products sold, an expense account for money paid out, a summary of monthly receipts and expenditures, a time book for the year with account for work done, also pages arranged to show the cost of each crop produced, together with a performance record for twenty cows. We do not pretend that this is a complete set of up-to-date farm books, but we do say that anyone who will send 50 cents to pay for one-year's subscription to The National Farmer and Stock Grower is at liberty to select the Farm Record and Account Book as a free premium, and we will send one copy postpaid, safe delivery guaranteed. It is well worth having and worth studying. Send money order for 50 cents to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone watch case. In order to understand this subject, see page 23. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. You know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating.

BLOODED STOCK NOTES.

In the breeders' columns will be found a card by John McLaughlin, breeder of Poland-China hogs at Marmaduke, Greene county, Ark., on the St. Louis and San Francisco Railway. This herd is well established upon a strong foundation and at a good shipping point. See his card.

The pure-bred Poland-China pigs advertised by F. L. Henderson, of Normandy, St. Louis county, Mo., are ready for shipment. They are, as stated, the large, thrifty kind, pure-bred, eligible to registry, and good enough to go on any farm in the country.

Look up the advertisement of Chas. Dorr, of Osage City, Kansas, who has the habit of selling fine stock cheap. He has 100 Duroc-Jersey pigs of his own breeding for sale, and looks for quick returns and small profit. He can send pigs that are well bred and not akin.

Trumans' Pioneer Stud Farm, of Bushnell, Ill., report, May 1st, as follows: "We have an extraordinary lot of stallions on hand at this time. Our March importation of Shire and Percheron stallions are in fine condition for sale; and we are desirous of moving them as soon as we possibly can to make room for another importation that our Mr. J. H. Truman advises us is ready to leave England. The stallions that we have on hand for sale are not a lot of horses that have been culled over all winter and spring, but in most instances are fresh horses that have been imported in February and March of this year. Shall be pleased to mail our new catalogue and any other information to any of your readers requesting same."

The old-time Aberdeen-Angus breeder, J. P. Vissering, Box 1, Godfrey, Ill., writes: "If this were written on a ten-dollar bill it would scarcely be more valuable to you than the message it now contains. To obtain top prices you need top cattle, and you know there is nothing superior to Angus blood. Now, listen: I offer you more Angus quality for the money than you can find elsewhere—bulls that sire market toppers. I sell 90 per cent. of my cattle on mail orders with the privilege of returning if not as represented. But I would rather you would come and see them. Send for my booklet. It contains my story. It is free."

Wilder Carpenter, breeder of pure-bred Poland-Chinas at Marmaduke, Ark., has recently purchased some fine stock from Sheehy Bros., of Hume, Mo., including an April, 1910, gilt bred to the boar Elicluifer, weighing 815 pounds, and a first-prize winner at the Missouri State Fair. He paid $100 for this gilt, and Messrs. Sheehy Bros. state that they have sold gilts no better for four times as much. Mr. Carpenter also bought a herd boar and two of the finest gilts from the famous Poland-China improver, Frank D. Winn, of which mention will be made in later editions.

No Benefit, No Pay.

You ought to try a 25-day trial treatment of Bodi-Tone on its no benefit, no pay plan. This plan is fully explained in the large Bodi-Tone advertisement on the last page in this issue. If you have not yet tried Bodi-Tone, you can get a dollar box on trial, without a penny in advance, simply by writing for it. Read the offer.

Practical Farming and Gardening.

This is a book of 500 pages, 6x7¼ inches to the page. It is a complete farmers' instruction book. The feeding chart is worth a ten-dollar bill to any stock farmer. Soil fertility, drainage, grain crops, gardening, truck growing, fruits, forestry, pruning, grafting, budding, injurious insects, plant diseases, spraying, cattle, sheep, horse raising and feeding, treatment for diseases, silos and silage, poultry, handy rules and farm cookery, are a few of the subjects. There are eighteen three-column pages of index. If you look for something you find it. This advertisement will not appear again. The edition will be exhausted this month and we cannot get any more at a price we can afford to pay. Send One Dollar and we will send you **Practical Farming and Gardening,** postage paid, and The National Farmer and Stock Grower for two years. This is a grand offer. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Nineteen fat native heifers, 624 pounds average, sold at St. Louis at $6.25 per 100 pounds.

Sophie, 19th, of Hood Farm.

A picture of this handsome cow will be found on the first page. She has just come into prominence as a cow that gives an abundance of milk which contains a large percentage of butter-fat. During the year of her test she gave milk that ranged from 5.37 to 7.00 per cent. butter-fat, and her total milk production was 14,373 pounds and 3 ounces. The estimated amount of salted butter which could be marketed from the butter-fat produced by Sophie in one year amounts to 1,005 pounds 11 ounces, which is a daily average of 2 pounds 12⅓ ounces for the entire year.

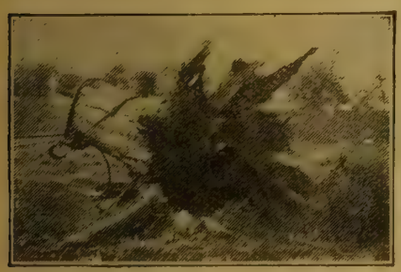
The feed bill of Sophie for the year was $173.48, which is estimated at high prices; but her milk production, if sold at 10 cents a quart, would amount to $718.65, leaving a profit of $545.17.

A dairyman will better understand the value of this cow when it is stated that she gave about five gallons of 6-per-cent. milk a day every day in the year, and he can figure the value to himself under his own conditions. She consumed 15 pounds of grain a day, and the balance was pasture and forage.

Sophie was only four years and eleven months old when her year's test began. She did her work easily and kept in good health the entire year. Jersey cattle breeders will understand that she is highly bred. Her sire is F. H. Chief that is entered in the Register of Merit of Jersey cattle, and was bred at Hood Farm. He is by Merry Maiden's Son, bred by Hood Farm, and out of Sophie Hudson, owned by Hood Farm, one of the best daughters of Sophie's Tormentor, that has twenty-two tested daughters, including Figgis, the champion and grand champion cow at the World's Fair, St. Louis, in the greatest class of American and imported cows ever brought together.

The Work of a Stump Puller.

One of the patrons of this paper purchased a Hercules Stump Puller last year to clear his land, and, being asked whether it was as it was represented, he said: "Whenever the anchorage is good and you use the Triple-power, the stump has got to come." For further particulars in regard to stump pullers address Hercules Mfg. Co., 140 17th street, Cedarville, Iowa.



A DETHRONED MONARCH.
Leaving at least sixteen square yards of most fertile tillable ground.

Home Mixing of Fertilizers.

By writing to the German Kali Works, Continental Building, Baltimore, Md., any farmer can obtain a booklet entitled "Home Mixing of Fertilizers and How to Do It." This is a very interesting publication, and every one of our readers can learn something from it. The whole story is told so clearly that it does not require an interpreter. The book includes a table giving the composition of all farm manures and commercial fertilizers, with formulas adapted to all crops and the amount of fertilizer ingredients taken from the soil by all farm crops. Send for it without delay.

Dried Fruit Quotations

At St. Louis, May 1st, for consignments received on the market. Quote per pound: Apples—Evaporated rings, 12c. for choice, 10 to 11c. for prime, and 7 to 8c. for poor to fair; cores, peelings and chops, 5 to 5½c. Sun-dried—Choice quarters, 6½c.; prime, 5½ to 6c.; poor to fair, 5 to 5½c. Peaches—Sun-dried halves, 5c.—choice stock worth more.

Phenomenal Increase in Business.

From January to April, inclusive, four months, the business of Clay, Robinson & Co., live stock commission firm at the St. Louis National Stock Yards, increased 84 per cent. This is a remarkable gain, for the reason that they did a large business last year.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Vocational Training in Our Country Schools.

Vocational training means training in occupations by which people make their living. Vocational training is the term now being applied to the teaching of trades in schools. It is a matter that is forcing itself on the attention both of the people in the cities and the people living in what we call the country.

There was a time not long ago when it was doubted whether or not trades should be taught in schools. But now those that formerly opposed the teaching of trades in schools recognize that the teaching of trades is coming and they are falling in with the general movement.

There are two great arguments in favor of teaching trades in the schools and many arguments of a minor character. One of the two big arguments is, that the old apprenticeship method of learning trades has gone forever. Skilled workmen do not like to teach their trade to others, for the new pupils will soon become competitors. Even if they do consent to take apprentices, the skilled workmen keep back some of the most important information, which may enable them to keep the upper hand in the case of a rivalry. So it is exceedingly difficult for the young man of to-day to learn a trade. He must remain an unskilled laborer or must begin work at something, pretending to know about it when he does not, and thus getting experience at the expense of the man that employs him. This is a method that is becoming quite common.

The other great argument in favor of the schools teaching trades is, that under the present system most of the boys drop out of school before completing the eight grades, and they would remain in school for many years longer if they could at the same time learn a trade.

The latter argument has many kinds of support. It has been found by actual trial that pupils remain in school longer if they can at the same time with their other studies learn some trade by which they can later earn money.

In the state of Massachusetts some years ago it was found by the census takers that there were 25,000 boys between fourteen and sixteen years of age who were not in school. It was determined to find the reasons that were responsible for them being out of school. A careful poll was made, and 60 per cent. replied that they had left school because the school taught them nothing by which they could make a living, and that they could have remained in school as well as not. This meant that 25,000 would have been held in school by vocational courses suitable to them.

Because a student learns a trade is no reason why he must follow it for life. Many people learn several trades. The writer knows of a young man who went into a vocational course for the sake of learning to lay bricks. He learned to lay bricks and kept on with his other studies and graduated. Then he went to laying bricks and received $6.00 per day during his summer vacations. He put himself through several years of college work in that way and has now earned money enough to complete his course in physical training. He is about to graduate in a noted school for the training of teachers of physical culture. He never intended to spend his life as a bricklayer; it was but a thing to help him go on toward his chosen vocation.

A boy with a good trade can work his way through any college. But in the country, vocational training is possible only in our consolidated schools.

Umbrella Language.

"David Graham Phillips was a realist. He handled life with a biting humor. The ordinary, romantic novel, Phillips once explained, resembles the language of flowers, while Phillips' own novels resemble umbrella language."

The speaker, a member of the Princeton Club of New York, smiled.

"Phillips then quoted," he continued, "some of his umbrella language. It ran:

"An umbrella placed in the club rack indicates that it will soon change owners.

"An umbrella carried over a woman by a man who gets nothing but the drippings of the rain is a sure sign of courtship.

"When, on the other hand, the man carries the umbrella so that the woman gets the drippings, it is a sign of marriage.

"A cheap cotton umbrella placed beside a fine silk one means 'exchange, no robbery:'

"To buy an umbrella means, 'not smart, but honest.'

"To carry an umbrella to work in the morning means, 'it is bound to clear off.'

"To lend an umbrella means, 'I'm a fool.'

"To return an umbrella—but never mind what that means, for it is a thing that nobody ever does."

Proved His Straightness.

"The late Frank Work," said a New York horseman, "had a direct and simple humor, a good deal like Mark Twain's.

"Talking to him once about a jockey, I said indignantly:

"'I don't know how anyone can call him straight.'

"'Well,' said Mr. Work, "all I can say is, he's been up before the committee three times, accused of selling races, and he got off every time. I don't know a jockey in America that has had his straightness tested any oftener.'"

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Cost of the Egret Plume.

The state of New York has passed a law forbidding the sale of the egret plume used in the trimming of women's hats. The reason for the new law is, that the obtaining of the plume means the slaughter of one female bird for each plume and indirectly the death of many baby birds. For the history of the beautiful, feathery hat trimming is this: At nesting time there appears on the female egret a beautiful white plume, something like ten to fourteen inches in length. It is undoubtedly one of the most beautiful plumes grown on any bird and brings a high price in the commercial world, for many hundreds are sold yearly to the women who can afford to pay the price. The plume can be obtained in its beautiful perfection only after the nesting time, when the baby birds have come. Then the hunter singles out the female bird and kills her for the purpose of robbing her of the beautiful badge of her maternity. In the nest are the hungry, helpless baby birds awaiting the return of the mother with the food which they depend upon her to supply, but she does not return and the nestlings die of starvation. Needless to say that each year the egret birds are becoming less in number, and it would not take many more years of such slaughter as has gone on in the past for the women of fashion to be responsible for the extinction of these beautiful birds.

Women who hesitate at killing a fly or a spider wear these plumes, secured at such an awful price. Many, no doubt, do it in ignorance. Others do it carelessly. May those who do it in ignorance be speedily enlightened and may they instruct their children against the encouragement of useless slaughter and suffering. For the careless women, who will have their finery in spite of any suffering it may cause, there remains nothing but state legislation, which will place such things beyond their reach.—Janet Thomas Van Osdel.

"There's Another Day Coming."

At the head of the women's wear department in one of the city's big clothing stores is a little woman who has on her small shoulders a weight that might have made even the broad shoulders of Atlas grow weary, for it is to her that women all over the city look to get out their garments on the day they have set to wear them. And even the sweetest-tempered woman seems to show a sign of acidity when the gown or the suit she has planned to wear to a certain function is not forthcoming at the moment set. Tillie, as she is called, has in her charge the alteration work on women's ready-made suits, coats, dresses and waists, and she it is who must bear the brunt of the many scoldings and complaints when goods ordered are delivered at wrong addresses or are not ready to deliver at the appointed time. There may be a rush of orders in her department; sickness may keep some of her help away; but complaining customers make no allowance for any of these things. I have had many a peep behind the scenes in this score, and Tillie is always the same little body of smiling good cheer. Never for one moment will she allow any of her helpers to stay flustered or worried. The moment she sees any girl working with nervous haste to get ready some garment for which there has been an insistent call, she says: "So, so! Don't get nervous. There's another day coming, and what we don't do to-day we can do then." And immediately the calming influence is felt, the girls lose the nervous feeling of hurry and a greater amount of work of a higher grade is turned out with less strain on the workers. Another noticeable feature is, that these girls, though they work very hard, have not the strained look of weariness seen on the faces of many girls in similar work.

Undoubtedly Tillie's motto is one which might save many women from nervous breakdowns, preserving their youth, and making them far more efficient workers. If, instead of working on and on when every muscle in the body aches and every nerve is buzzing, a woman could calmly turn out what work she had time for and leave the rest without a bit of worry, because "there's another day coming," how much she would save!—Janet Thomas Van Osdel.

Some Uses For Cotton Crepe.

One of the prettiest of inexpensive wash materials is cotton crepe, which can be purchased for from fifteen to twenty-five cents a yard, depending upon quality and color. It comes in every color and shade, plain and figured. The whites, reds and blues make pretty waists, children's dresses and house gowns; the figured crepe is mostly used for kimonos, dressing sacques and draperies. The crepe wears well and it becomes more crinkly, and so more attractive, with every washing. It shrinks considerably, but a couple of washings before it is made up will prevent any inconvenience from that cause. Best of all, it must not be starched or ironed or its crepe appearance will be spoiled. This makes it a favorite with busy mothers, who find little time to launder the children's dresses, and also with the woman who wishes to wear dainty white waists but dreads the ironing of them. The other day I saw a white crepe waist made without a tuck or trimming of any kind save a bit of coarse hand-crocheted lace at neck and sleeves. With it was worn a jabot made of crocheted lace to match the waist trimming. The finishing touch was the small crocheted buttons used for fastening the waist. It was as neat and as pretty a garment as the most fastidious woman could desire. The coarse laces seem especially appropriate for crepe waists, and the woman who is handy with her crochet needle will delight in making her own trimmings. The woman who is traveling will find that with several of these waists in her wardrobe she need never be without a fresh one, for she can defy the laundries and wash one out in her room at any over-night stop.

The figured crepes in tans and ecrus make excellent hangings for the windows and doorways of bedrooms and dens. They can be secured in tones to match the general color scheme of the room and their effect is to soften the light. The fact that no ironing is necessary and that the crepe holds its color well should make such hangings far more popular than they are at present.—Janet Thomas Van Osdel

Reliable Gold-Filled

We show here a staple and popular style of watch case: it is known as an "engine-turned" design. Note the depth of the engraving. This is done with a diamond-pointed tool on machines costing three to four thousand dollars apiece. The deep, sharp, clear-cut work is possible because of the thickness of the gold.

The important thing for you to remember is that on ordinary filled cases the surface of gold is so thin that the design is not diamond-cut at all—it is merely burnished in. It soon wears smooth and the base metal shows through. But with Crescent or Jas. Boss gold-filled cases this work is done exactly as on our Keystone solid-gold cases.

The marks shown at the top of this page insure absolute integrity in bullion value, in assay, and in the construction of your watch case. They are standard with the fine jewelry trade, and have been for fifty years.

The Keystone Watch Case Co.
Established 1853
Philadelphia

Papering Whitewashed Room.

In papering a room which has hitherto been whitewashed it is not easy to make the paper adhere satisfactorily. The experiment should be tried of forming the paste with skim milk instead of water. The milk must, however, be carefully skimmed, so that every drop of cream has been removed, the whey of separated milk being the best for the purpose. The paste must be scalded well and should on no account be too thick.—Milk Reporter.

The Satisfying Things of Life.

"The love of home and family and friends, the love of country and your God, are the only satisfying things in this life, and no amount of material wealth can measure up with it."—Henry Hale, President Ramsey County Agricultural Society, North Dakota.

The state of Nebraska has 129,419 farms, averaging 298 acres per farm. Of these, 3,864 are 1,000 acres or more. Of the total, 79,063 farms are conducted by owners, 49,382 by tenants, and 974 by managers.

Every restriction placed upon trade presses its weight upon the producer.

PROF. SAMUELS ORIGINATES PECULIAR METHOD OF TREATMENT

HIS PHENOMENAL SUCCESS CAUSES ENMITY OF DOCTORS

ARRESTED MANY TIMES

But Acquitted by Juries and Judges and Permitted to Continue in a Work That He Alone Can Do, as He Is the Only Man in the World Using His System—Patients Make Startling Statements of His Successful Method of Treating Consumption, Bright's Disease, Kidney Trouble, Blindness, Fits, Catarrh, Heart Disease, Cataracts, Nervous Prostration, Dropsy, Hay Fever and Many Other Diseases That Baffle the Skill of the Ordinary Physician.

WICHITA, Kas.—The almost miraculous cure of hopeless invalids made by Professor Samuels, of Wichita, Kas., have been of such a startling character that they have aroused wide-spread wonder, admiration and curiosity. Time and again he has taken cases pronounced hopelessly incurable by the medical profession and restored the patients to health in a most phenomenal manner.

There is considerable mystery attached to Professor Samuels' method of accomplishing these marvels, and it is known that he does not use the drastic drugs and medicines that doctors depend upon. And it is a matter of proof that with the system this discovery gives him, he has made the blind see and the lame walk. He has revived the flickering spark of life in bodies on the very verge of the grave, and restored to health men and women given up to die by doctors and specialists.

Professor Samuels came into note several years ago by his almost miraculous cure of "Blind Joe," of Topeka, Kas., who was well known in that city, having sold peanuts and popcorn on the streets there for years. He had been blind for ten years and had exhausted all the means in his power to be cured, but had given up in despair until he fell into the hands of Professor Samuels, who effected a cure.

Professor Samuels has been arrested many times for practicing his system without having a diploma. On being interviewed a few days ago relative to his many arrests, Professor Samuels said:

"Yes, I have been arrested many times for practicing without a license, but in no case have I been convicted. Naturally, the medical profession are jealous of my success, and are fighting me most of the time, but how are they going to convict me? Do you suppose any jury, when my patients come into court, as they did at Alva, Okla., Newkirk, Okla., Ponca City, Okla., and other towns, and tell how they have been cured of all manner of trouble, do you suppose for a minute that any jury hearing these people and seeing with their own eyes what has been accomplished, is going to convict me? My trial at Alva was before a very able judge, Jesse J. Dunn, who is now Chief Justice of the state of Oklahoma; after hearing the evidence for and against me I was acquitted. At Newkirk I was tried before Judge Hausley, a very able judge. Judge Brown, a noted lawyer, was the prosecuting attorney, and fought the case very hard, but I was acquitted. These persecutions were brought because I have no license. Being the originator and only practitioner of my system of healing, how am I to have a diploma? I can't issue it to myself, and the medical fraternity, trotting along in the same harness for half a century, too blind to accept my discovery, which accomplishes actual results, make it impossible for me to procure a license as a representative of any of the recognized schools. So what am I to do but to proceed in my own way and accomplish results that astound humanity?

The professor here showed a reprint from the court records showing the proof of his assertions that the court had not convicted him.

Professor Samuels is a remarkable man. Bright, alert, progressive, and although 60, he is straight and active and gives one the impression that he is much younger. He talks with such an earnest conviction and enthusiasm of his work that the listener must believe him and believe in his work.

"What is the nature of your treatment?" was the next question.

"That is a secret that has taken many years of my life to accomplish. I can only say that my results are obtained treating diseases by dropping a colorless liquid, which I prepare, into the eye. Strange as it may seem, so-called incurable cases of consumption, Bright's disease, dropsy, epileptic fits, nervous prostration are treated in this apparently miraculous way. My system is based absolutely on scientific principles. The eye is the window of the soul. I have evolved a system of treating other bodily ills based on the relation of the eye to the system as a whole. This may seem strange, but here are the proofs."

Thereupon the professor placed before his interviewer his "Message of Facts," affidavits and letters in great numbers, many of them from responsible and well-known people, all bearing on his statements.

The case of Mr. C. C. Miller, residing near Hutchinson, Kas., who for years had suffered untold agony from hemorrhage of the kidneys and various complications of that dire malady, is another example of the almost miraculous results of Professor Samuels' strange treatment. Mr. Miller in his testimonial states that he had tried every remedy suggested by his medical advisers without obtaining relief, and at last, hearing of Professor Samuels' wonderful cures, decided to take his treatment. At that time he was in a deplorably enfeebled and emaciated condition, weighing only 118 pounds, and was almost without hope. Six months after beginning the treatment he was absolutely restored to health, weighed 155 pounds, and has had no recurrence of his trouble. Mr. Miller has lived in the vicinity of Hutchinson since 1877, is a man of high integrity, and his endorsement of Professor Samuels' method of cure should be regarded as the strongest kind of proof of its merit and reliability. In fact, the greater number of the professor's patients are of a class whose testimony cannot be discounted, and perhaps this has been one of the main reasons why his fame has spread so rapidly and brought so many of the afflicted to his office for treatment.

Mr. George Hartman, living at 211 North Meridian street, Wichita, Kas., in his testimonial states he had what some physicians pronounced Bright's disease and others called it diabetes. Various doctors—among them his family physician—had given him up to die. He was so weak he could hardly walk. About this time he heard of Professor Samuels and placed himself in Professor Samuels' care, and showed change for the better in a few weeks. He states that at the end of ten months he felt just as well as he ever did, and claims he is absolutely cured and has never had a recurrence of the trouble.

Mrs. J. T. Williamson, who resides at 200 B street West, Hutchinson, Kas., in her testimonial states she was almost on the verge of the grave with consumption and nervous trouble, and that for nearly twenty-two years she was seriously afflicted with St. Vitus' dance in addition to tuberculosis. She states that a leading physician had pronounced her incurable, and that she would die and be buried with the falling of the leaves in autumn. As a last resort she turned to Professor Samuels, and after starting his treatment she says she had only one hemorrhage of the lungs and began to improve. In a short time, she states, she was able to do her own work, and that she recently had her lungs examined by a doctor, who pronounced them absolutely sound and well.

Mrs. H. J. Burroughs, living at Collins, Ia., and who in her testimonial said she had a serious case of heart trouble, in a recent letter to Professor Samuels states: "I have not taken a drop of medicine since I began your treatment. Before that I had to take from one to four heart tablets a day. I had dizzy, blind spells, and my heart did not beat regularly at all, but just flutter. Now it beats regularly and does not bother me a bit. I tell everyone I talk with of your treatment and what it has done for me."

Mr. C. W. Neel, living at Broken Arrow, Okla., in his testimonial says he had a very bad case of rheumatism. Writing Professor Samuels in a recent letter he states as follows: "Thank you, Professor, ten thousand times for your assistance in curing me of that awful rheumatism. I am still hard at work and feeling fine."

Miss Daisy Hubbard, who lives at Alva, Okla., in a recent letter wrote: "For fifteen years I have been subject to epilepsy, and have received treatment from several noted doctors and have failed to receive permanent good." As a last resort she began treatment from Professor Samuels, and now in her testimonial says she has no symptoms of the disease.

Mrs. Louisa Lockhart, living at Washington, Kas., in her testimonial says she had a very bad case of kidney and bladder trouble. She had reached the point where her kidneys and bladder were in an awful condition. In a recent letter to Professor Samuels she states: "After taking your treatment two weeks I was able to do my own housework, which I had not done for months. I took the treatment one month and now I am well in every respect, thanks to your wonderful treatment."

"Is it necessary for your patients to come to see you to be treated?" was asked. "No, my treatment can be sent by mail. Many of my patients come to see me, but it is not always necessary. My treatment is sent to hundreds, and, in fact, I am as successful in treating that way as though the patients were right here. To people from a distance who write me, an information blank is sent to fill out. In this way I am enabled to send them the treatment with full directions for its use."

"I should think with your ability to cure you would be in a position to demand big money from your patients," remarked the interviewer. "No, I do not do that now. My charges, when the patients used to call on me in person, used to be pretty high. I am getting old, and I feel that it is my duty in my last years to place my treatment in the hands of the poor as well as the rich. I believe that I owe a duty to mankind, and that as many people as possible, no matter what race or nationality, nor where located, should be benefited by my life's work. On this account, I have reduced my charges so they are within reach of all.

"My greatest aim in life from now on will be to relieve the ills of humanity, and when death shall claim me, I have arranged so that my secret will not die with me, but will be known, so that men in all ages to come will reap the reward of my life's work."

Everyone who is sick, no matter what their troubles may be, should write Professor Samuels, room 110, Samuels Bldg., Wichita, Kas., for his "Message of Facts," and they will find something in it of interest to them.

How About Your Straw Pile?

The threshing of small grain is a process which is very important to the farmer and the thresherman. The question "Is there grain in your straw pile?" is a very pertinent one asked by Nichols & Shepard Co. of Battle Creek, Mich. They are builders of threshing machinery and have a card addressed to you on page 2 of this paper.

Best Watch in the World.

One hundred and eighty of the leading railroads have adopted the Howard Watch as the standard of excellence. It is because the Howard Watch has no actual competitor. There is an interesting story about this watch which our patrons will take pleasure in reading. Just write a postal card to Dept. 122, Howard Watch Works, Boston, Mass., and ask for the story of The First American Watch. See page 13.

The Eyes and Ears of Night.

For the fourth time he had said "Good night," but still they lingered on the frosty doorstep.

"Ah, dearest," he whispered tenderly, gazing toward the starlit skies, "the night has a thousand eyes."

"Sh! You goose!" continued the pretty girl, as she noticed the dark forms at the opposite windows. "Not so loud! The night also has a thousand ears."—Chicago News.

Don't Wear a Truss

FREE

STUART'S PLAS-TR-PADS are different from the painful truss, being made self-adhesive purposely to hold the rupture in place without straps, buckles or springs—cannot slip, so cannot chafe or compress against the pelvic bone. The most obstinate cases cured in the privacy of the home. Thousands have successfully treated themselves without hindrance from work. Soft as velvet—easy to apply—inexpensive. Process of cure is natural, so no further use for trusses. We prove what we say by sending you Trial of Plapao absolutely FREE. Write TODAY.

TRIAL OF PLAPAO

Address—PLAPAO LABORATORIES, Block 57, St. Louis, Mo.

DR. M. NEY SMITH, 302 N. 12th St., St. Louis, Mo.

$3.50 Recipe Cures Weak Kidneys Free

Relieves Urinary and Kidney Troubles, Backache, Straining, Swelling, Etc.

Stops Pain in the Bladder, Kidneys and Back.

Wouldn't it be nice within a week or so to begin to say goodbye forever to the scalding, dribbling, straining, or too frequent passage of urine; the forehead and the back-of-the-head aches; the stitches and pains in the back; the growing muscle weakness; spots before the eyes; yellow skin; sluggish bowels; swollen eyelids or ankles; leg cramps; unnatural short breath; sleeplessness and the despondency?

I have a recipe for the troubles that you can depend on, and if you want to make a quick recovery, you ought to write and get a copy of it. Many a doctor would charge you $3.50 just for writing this prescription, but I have it and will be glad to send it to you entirely free. Just drop me a line like this: Dr. A. E. Robinson, K-1174 Luck Building, Detroit, Mich., and I will send it by return mail in a plain envelope. As you will see when you get it, this recipe contains only pure, harmless remedies, but it has great healing and pain-conquering power.

It will quickly show its power once you see it, so I think you had better see what it is without delay. I will send you a copy free—you can use it and cure yourself at home.

Tobacco Habit Banished

DR. ELDERS' TOBACCO BOON BANISHES all forms of Tobacco Habit in 72 to 120 hours. A positive, quick and permanent relief. Easy to take. No craving for Tobacco after the first dose. One to three boxes for all ordinary cases. We guarantee results in every case or refund money. Send for our free booklet giving full information. Elders' Sanatarium, Dept. 86. St. Joseph, Mo

NO MORE WHISKY ADVERTISING.

The TWICE-A-WEEK REPUBLIC of St. Louis, Mo., makes the announcement that no more whisky advertising will be printed in its paper. This will be good news to most of our readers. The TWICE-A-WEEK REPUBLIC is the oldest, biggest and best metropolitan semi-weekly newspaper in the United States, and by cutting out this line of advertising it should greatly increase its circulation in this community. The subscription price is 50 cents a year, but for a short time only they will make a special rate of three years for $1. Be sure to take advantage of this liberal offer, and by all means advise your friends and neighbors of the fact that all whisky and liquor advertising has been discontinued and that $1 will pay for a three-year subscription. Write for free sample copy. Send orders to The St. Louis Republic, St. Louis, Mo.

Flowers on the Farm.

Happy is that farm home where the owners appreciate the value of flowers. The flower beds and the flowering vines will remain in the memories of the children as long as life lasts.

The dahlia is one of the most attractive flowers that can be grown. New varieties of it are constantly being brought out by the seedsmen. But these new varieties need to be manured well, or in time the flowers will revert to original forms. Some of the new ones are almost as beautiful as chrysanthemums.

One of the very beautiful fall flowers is salvia. This needs to be prepared for in the spring, for the plants are of slow growth, and they should be set out by hundreds to be effective. They are like a flame of fire when they are massed together in the fall. In the city of Washington the salvia is one of the most used plants. By October it is to be seen massed in great banks, giving a touch of color to almost every scene. Our farms are now using it effectively, but many have not yet awakened to its value as a beautifier.

Plant a good many perennial flowers. They are the great standbys, for they come up every year, even when they are forgotten. Perennial phlox are now being extensively used and are hardy. Peonies are perhaps the most universally used of all the perennial flowers, for they group beautifully.

Some of the spires will be found very useful in locations where winter conditions are hard. Spires Van Houtii makes a fine fringe for large buildings. But Spires Sobifolia is perhaps more persistent in fighting its way. The writer has seen it growing far north in British America, and it was thriving there as a hedge plant, where the cold and the fierceness of the winds made other plants impossible of perpetuation. It has a flowering racime that is pretty as long as it lasts. It produces suckers in profusion, and when a single plant has obtained a foothold there will be no trouble in getting as many others as are desired.

A late flowering annual is the China aster. It is surprising how beautiful it is when grown on land that has been well manured. The writer has raised these plants when the flowers were so large that they were persistently mistaken for chrysanthemums.

One cause of poor success with flowers is a restriction of plant food, and this in the villages causes the blasting of many hopes. But in the country large supplies of manure are available, and there is no reason why the flowers should not be a success.

But the better plan is to grow as many varieties of flowers as possible. This not only increases the interest in them but increases the chances for success. Some varieties thrive under conditions that prove fatal to others.

The growing of flowers on the farm offers a wide field for experimentation. Some remarkable successes will often be scored with common plants. The writer saw on one farm in Central Illinois a crimson rambler rose bush with ten thousand roses all in bloom at the same time. It was a wonder in that neighborhood, and made the farm where it was grown a notable place. Yet it was perhaps an accidental success that may be repeated now and then in other localities.

Even if the so-called reciprocity treaty with Canada fails to become a law, that country has obtained some free advertising that is worth considerable money.

PRIZE-WINNING RHODE ISLAND RED HEN, bred and owned by A. B. Lampert, of Brinkman, Ark. Score, 94¾. Shown three times and won each time in single classes.

GRAND SUBSCRIPTION OFFER.

This glorious and beautiful picture is 6x8 inches and is mounted on a nice green mat which is 8x11 inches. It is just the right size for a panel picture. It is rich in colors and is ready to tack or hang on the wall. It is not necessary to frame this picture, but no picture in the world is better worth framing.

Mother and Child.

The dark, warm colors of the room, enlightened by the glow of the candles; the chubby face; the restful, healthy, natural position of the child; his delicate, little hands; and the fond look of the mother, all go towards perfecting a picture that will be enjoyed and give happiness to any house it may enter.

We offer this picture as a subscription premium. Send us 25 cents and we will send The National Farmer and Stock Grower for six months. We will also send one mounted copy of the **Mother and Child Picture**, in colors, postpaid, and safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Blood Poison

30-Day Treatment FREE

Remarkable Results Produced By New Vegetable Treatment Without Use Of Mercury or Potash.

The terrible results of mercury and potash on blood poison are well known. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms often break out, and you find that your bones have been rotting all the while. Your teeth may begin to loosen and your tissues, glands, brain and vital organs show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Medical authorities admit that this is so.

The remarkable new treatment, called the Obbac Treatment, is purely vegetable, containing positively no mineral poison whatever, no mercury, potash, narcotics or opiates. It has produced remarkable changes in only 30 days. Treat yourself privately at home, and become as free from taint as a new-born child.

The wonderful Wasserman Test, the only blood poison test known to scientists, has proven that a man has been completely purified by the Obbac Treatment.

Don't spend months and years of your precious life, and destroy your health forever by taking mercury and potash which doctors commonly prescribe. Write today. Send your name and address and complete description of your case to the Obbac Co., 1200 Obbac Bldg., Chicago, and they will send you at once in an absolutely plain, firmly sealed package, a full 30-day treatment absolutely free.

TAPE-WORM

Get four of your friends to club in with you at 25 cents each, making $1 in all, and thereby get your own book free of charge. Address all orders direct to

EVERYDAY LIFE, Novel Dept., A 37, Chicago, Ill.

Amatite ROOFING

TO buy a roofing that requires painting is inviting trouble. Painted roofings are as out of date as the harvester machinery of thirty years ago.

The roofing of to-day needs no painting. That's one of its great features.

If you are still using the "old rubber kind," the kind that requires painting every year or two to keep it tight, we want to tell you about Amatite; why it *needs no painting;* why it *wears longer* than the smooth-surfaced" roofings, and why it *costs less.*

We want to send you a sample so that you can see what a solid, substantial waterproof roofing Amatite really is. Write to-day. Address nearest office.

TRADE B MARK

Among the Flowers.

When receiving plants from the florist, always keep a sharp lookout for insect pests. Even the most careful grower sometimes lets a plant among the thousands slip from his hands with a small colony of unwelcome dwellers. And when we see with what persistence certain insects will cling and how rapidly they multiply the wonder comes that he can do as well as he does.

Different insects require different treatment. With the hose turned on daily there is little chance for the red spider to get in its work; but aphis, scale or something else may through this avenue work its way into your window.

Wash plants thoroughly, examine with a lens, and then keep apart from your own collection for two or three weeks in order to be sure that they are free from insects. If not, use strenuous efforts to rid them of parasites, and the task will be comparatively light if you know that the trouble is restricted to the newcomers, usually small plants.

Florists frequently send out printed directions for managing the new plants. If so, follow them carefully. If not, those which seem a bit dry should have the roots placed in water for a few hours before planting. This will give the plant a chance to soak up an abundance of moisture and thus tend to prevent withering. Most plants like warmth and partial shade until root growth is fully established. However, there are special cases which require individual attention, and some common sense as well as a general knowledge of the plants at hand is essential. Certainly no one would think of soaking a cactus in water, no matter if it had been days on the road.

If you have a shady spot which defies your efforts at flower gardening, why not try ferns and wild flowers? Go to the woods some wet day and carefully lift a half dozen large ferns, being careful to dig deep enough to get the strong, woody roots almost entire. Transplant them as soon as possible, giving rich loam or garden soil, and protect them from the sun for a few days, always keeping them well watered. A combination of ferns and violets is a most charming border for the shaded porch. Select such violets as flourish best in your own locality. The great blue, stemless ones do not object to removal, even when in full bloom, and they seed so freely that they will well hold their place. The large Canada violet, white and fragrant, is another choice variety, and those who have access to the charming bird's-foot variety may certainly consider themselves fortunate.

Almost any plant will keep its fine appearance better through the season if regularly stripped of blossoms. In the well-kept parks and gardens a part of the regular work is the clipping of all fading blossoms. If we would see the beds remain at their best this must be done; or, better, pick them while fresh and send them to friends. It is the kind of generosity which pays.

Sow phlox or asters among the spring flowering bulbs and border the bed with alyssum. This will not only economize space but will prevent any bare space to deface.

Avoid, above all things, planting more ground than you can care for. The well-cared-for bed of some simple flower is infinitely more satisfactory than the choicest plants neglected. There is to the flower lover a pathetic side to this neglected bed. It is a sort of outrage upon nature's wards. There is tragedy in the way they are choked and smothered by weeds or dried by the hot sun. Select with care and then treat your plants well if you would get satisfaction from them or impart it to your friends.—Bessie L. Putnam.

Conversation in the Home.

Youth is the time when the strongest impressions are made, the most facts accumulated. The home may easily supplement the school in adding to the foundation of an intelligent citizen by a bit of care in the conversation. There are small children who talk almost like old folks when with them. And yet they are as thoroughly alert to childish pleasures as any child. They may see the common-sense phase of any proposition, or they may be able to tell you all the facts and figures regarding the dinner or dress of a neighbor. It all depends upon the training.

If we abstain from anything more elevating in conversation than neighborhood gossip, the little ones can scarcely be expected to do better. But if we apply a small part of our thought each day to some interesting fact, some thought which will make a better citizen, there will soon be gained both to children and adults material which will be of benefit in after life.

If the thought is new, commence gradually. Read something of interest to relate at the table. It may be a description of the Roosevelt dam. The information drawn out will give a page of geography to the credit of the children. It will give a lasting impression of the power which science is giving to agriculture.

Or, each one in the family may be expected to look up something funny to furnish spice for the supper. What if there are old jokes presented! Some of them are worth laughing twice over. And the result is much more satisfactory than eating the meal in silence or discussing the folly of Mary Jane in marrying John or in choosing a pea-green silk for the wedding dress. Your family will be the happier, more fluent in conversation, better informed, and better able to do their part in the world's work.—Bessie L. Putnam.

Children's Dresses.

For common wear the sailor dress still holds it own, though it is belted down instead of the blouse effect of a few years ago. Ginghams are even more popular than ever, and the mercerized goods are almost as handsome as silk, with the added merits of cheapness and durability. As they are wider than prints they really cost little more, while the fact that they wear much better should be credited to them by the busy woman to whom the family sewing is burdensome.

A plain sailor collar and belt of the dominant color in the gingham gives a finishing touch that is charming. If one wishes, two or three of these collars may be made for the same suit, not only giving a chance for casting aside the soiled one, but making the entire suit look different. A school girl who has a blue-and-white suit made one collar and belt of white shrunk cotton with blue stars worked with mercerized thread in each corner of the collar and the letters "U. S. N." on the belt. The latter can be embroidered or appliqued with blue cloth, as preferred. Another collar was of plain blue with white trimmings. The latter, too, was shaped to a point in front, while the other one had the square effect in both front and back.

This but illustrates how a variation in the little details may give the effect of a larger wardrobe; and every girl likes to have as many changes as possible, especially when it can be done with almost no additional expense. Material which will match nicely with such a plan may often be found among the left-overs of last season.

A new stitch in embroidery which promises to be popular and is easily done is the cord stitch. If you have not the stamping outfit, simple designs may be traced on tissue paper, basted upon the cloth at the place, and the paper not covered by the stitches torn away when the work is finished.

Commence by knotting one end of the embroidery silk or mercerized thread used and pass the needle up through the cloth at the end of the line traced. An eighth of an inch below this take a stitch at right angles to pattern line, drawing it close yet not tight enough to draw the goods. This will form a stitch on the outside nearly parallel with the pattern line. Next take a stitch through this stitch; that is, merely pass your thread under it; and last, make a buttonhole stitch in exactly the place where the stitch was originally taken. The stitch is really made up of three processes, but is exceedingly simple and gives a very pretty cord effect when completed. Any child can quickly learn it, and thus put many fancy touches upon her clothing.

At all seasons there are bargains to be picked up in lace and embroidery, and these will find many uses in the evolution of the summer dress. If you cannot afford expensive goods, remember that wash goods are really more appropriate for children than the silks, and are very much prettier than cheap silks. There is such a variety from which to select that a beautiful dress may surely be found by everyone, with the prices varied to suit the purse.

Some of the dotted goods are exquisite, while the girl who wishes that she were more slender will prefer the stripes. If colored goods are preferred, be sure that the colors will wash well. Black and white shepherd checks are favorites still.

Above all, do not overdress the child. Simplicity is one of the charms of children's clothing, and the useless frills and trimmings may easily be carried to the point of vulgarity.—Bessie L. Putnam.

Tommy de Peyster—"My brother made ugly faces at you yesterday and you didn't darst to fight. You pretended you didn't notice 'im." Eddie Tuffnut—"I didn't, either. I thought they was natural."—Chicago Daily News.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is a safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors or Growths; also pains in the head, back and bowels, bearing down feelings, nervousnnss, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that it will cost you nothing to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all, old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write today, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H. • • • Notre Dame, Ind., U. S. A.

His First and Last Appearance.

"In the days of the first Cleveland Athletic Club the city was fairly overrun with boxers great and small," says former Councilman C. L. Carran. "There were many boxing schools, and the ambition of many a young man was to be a second Sullivan, a McCoy or a Corbett. One boy in whom I was much interested had an idea that he could fight, and one night he invited me down to the Cleveland Athletic Club to see him in action.

"As this boy went into the ring he beckoned the referee over to his corner and asked him to make an announcement. The referee was willing, and said:

"'Mr. Black asks me to say that this is his first appearance in any ring.'

"In about seven seconds my boy friend was lying flat on his back with small chances of getting on his feet for an hour or two. He was badly hurt physically, but his mind was clear. He whispered something to the referee, and this official stopped the count.

"'Mr. Black wishes to supplement his announcement of a few seconds ago,' said the referee, addressing the crowd. 'This is not only his first but absolutely his last appearance in the ring.'"—Cleveland Leader.

A Really Wonderful Lawyer.

There was a Prosecuting Attorney in Texas whose methods were so dramatic and uniformly successful that he not only became the terror of evil-doers but an object of admiration, especially among the negroes.

Upon retirement from office he was at once much sought after by those charged with crime. The first two cases which he defended resulted in conviction, much to his chagrin.

An old negro who had watched his prosecution in admiring wonder and looked up with equal interest when he conducted the defense, accosted him just after his defeat and said: "Mars Earle, you sho' is a wonder. No matter which side you's on, they go to the pen just the same."—Case and Comment.

Sunflower seed shipped to the St. Louis market has been selling at $1.75 to $2.00 per 100 pounds.

ITCH-ECZEMA FREE TRIAL

(Also called Tetter, Salt Rheum, Pruritus, Milk-Crust, Weeping Skin, etc.)

ECZEMA CAN BE CURED TO STAY, and when I say cured, I mean just what I say—C-U-R-E-D, and not merely patched up for awhile, to return worse than before. Now, I do not care what all you have used, nor how many doctors have told you that you could not be cured—all I ask is just a chance to show you that I know what I am talking about. If you will write me TO-DAY, I will send you a **FREE TRIAL** of my mild, soothing, guaranteed cure that will convince you more in a day than I or anyone else could in a month's time. If you are disgusted and discouraged, I dare you to give me a chance to prove my claims. By writing me to-day you will enjoy more real comfort than you had ever thought this world holds for you. Just try it and you will see I am telling you the truth.

Dr. J. E. Cannaday, 1322 Park Square, Sedalia, Mo.

Could you do a better act than to send this notice to some poor sufferer of Eczema?

Marketing Eggs Through the Creamery.

Farmers' Bulletin No. 445, issued by the United States Department of Agriculture, can be had by writing to the Hon. Secretary of Agriculture at Washington, D. C., and asking for a copy of it.

The bulletin is entitled as above: "Marketing Eggs Through the Creamery," and it is by Prof. Robert R. Slocum, Animal Husbandman in Poultry Investigation.

The bulletin first describes the usual method of marketing eggs, which is true to life, and explains the method by which the farmer brings eggs to the country store; how the country store accumulates them and ships them; how they are finally disposed of, and how everything conspires towards marketing good and bad, fresh and stale, clean and dirty eggs all together, and how good eggs laid by good hens reach the consumer as inferior eggs and sometimes as rotten eggs, with the result that everybody is kicking, including the consumer.

Prof. Slocum then goes on to state how eggs were sold through a creamery in Northern Minnesota; how the farmers delivered their eggs when they delivered their milk or their cream; how the farmers had to sign an agreement to send in eggs that were fresh and of uniform size, sorted in cartons, white in one and brown in another, each egg stamped with the trade mark of the creamery as a guarantee of quality and with a number, noting the farm the eggs came from, so as to trace all bad eggs back to the farm.

The bulletin goes on to state how the cases are filled up with cartons and shipped to the same people who were handling the butter from the same creamery, the cost of handling being not over a cent a dozen. Farmers as distant as fourteen miles from the creamery thus had their eggs placed fresh, clean and stylish into the consuming market at Duluth. The prices received net by the farmer ranged from 19 to 40 cents, and the yearly average was over 25 cents. A little country village that did not previously ship out eggs amounting to $300 increased the output to $4,000, and the farmer received the money, and they did not have to ship in eggs from Canada to supply the city of Duluth. The bulletin concludes by saying:

"It can not be denied that in the particular case described above, marketing eggs through the creamery has been a success. It has brought about carefulness on the part of the producer and a most decided improvement in the quality of the eggs. It has, moreover, provided the market with a grade of good, fresh eggs, which are always in good demand and which at present are almost unobtainable at certain seasons in the cities. It has, in doing this, prevented a considerable waste and loss in quality which is normally associated with the marketing of eggs in the Middle West, and has increased very materially the price which the producer receives. It would appear, in view of the fact that the creamery seems a logical and natural agency for the handling of eggs to good advantage, that this method, with modifications, is adaptable to a wide range of conditions, and that many creameries could well afford to make eggs as well as butter one of the products which they handle. Wherever this method is adopted it should mean a most acceptable increase in the price received by the farmer for his eggs, and this without any increase in cost to the consumer."

A Rare Chance and a Remarkable Offer!

EIGHT STANDARD TWO-YEAR-OLD GRAPEVINES, THE LADIES' WORLD FOR ONE YEAR, THE NATIONAL FARMER AND STOCK GROWER FOR ONE YEAR.

This Grand Combination To You For Only $1.00.

This is a subscription offer. A live one for people who appreciate a good thing. It appeals to all who own or rent a small piece of ground. All people can have good literature all the year round and grapes in season. Just read this.

THE LADIES' WORLD is a monthly magazine, forty-eight pages, four columns to the page, highly illustrated, cover in colors, beautiful, delightful, splendidly edited, lovely stories, instructive articles, lessons in housekeeping, domestic science, dressmaking, music, amusements, etc. It is fully equal in value to any monthly family publication.

THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, and especially so to cattle, hog and sheep raisers, dairymen, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page.

EIGHT STANDARD TWO-YEAR-OLD GRAPEVINES. These grapevines are ready for planting. They are two-year-old vines from the best Chautauqua vineyards. The collection consists of:

NO. 1. MOORE'S EARLY—Black, bunch not quite as large as Concord; berry larger and very much like it in flavor and quality. Vine a moderate grower. Produces a fair, and with high cultivation a heavy crop. Ripens early. Succeeds best on rich soil.

NO. 2. CATAWBA—Dark red when fully ripe. Bunch large, moderately compact; berries medium to large; skin thick; flesh of rich, vinous flavor. Vine a good grower, hardy, very productive. Ripens late.

NO. 3. DIAMOND—White. Bunch large, compact; berries large, round. Vine a good grower, with thick, heavy foliage; hardy and productive; of fine quality. Ripens a little before Concord.

NO. 4. CONCORD—Black; early. Decidedly the most popular grape in America, and deservedly so. Bunch large, compact; berries large, covered with a rich bloom; flesh juicy, sweet, tender; vine a strong grower. For general cultivation the most reliable variety.

NO. 5. AGAWAM — Red or maroon. Bunch loose, berries large; flesh juicy, of a rich, peculiar, aromatic flavor; ripens about with Concord; vine strong, hardy and productive.

NO. 6. NIAGARA—White. Bunch very large and handsome; berries large, round; skin thin, tough, does not crack; melting, sweet, with a flavor and aroma peculiarly its own; ripens with Concord, sometimes a little earlier. Vine productive.

NO. 7. DELAWARE—Red. Bunch small, compact; berries small; skin thin but firm; flesh very sweet and refreshing; ripens with Concord or a little before. Vine hardy, productive; requires rich soil and good culture.

NO. 8. WORDEN—Black. Bunch very large, skin thin. Superior to the Concord in the following points: It is better in quality, has a larger berry, a more compact and handsome cluster and ripens five or ten days earlier. It fully equals the Concord in vigor, health and productiveness.

OUR PROPOSITION.

Send us **One Dollar** and we will send you **THE LADIES' WORLD** for one year; **THE NATIONAL FARMER AND STOCK GROWER** for one year, and we will send you by mail, securely packed, postage paid, safe delivery guaranteed, the **EIGHT TWO-YEAR-OLD GRAPEVINES.** Address at once **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Beds and Bedding.

Unless the beds are carefully looked over and cleaned, they may make considerable trouble during the summer months, and if any traces of bugs are found, put gasoline in all the cracks and crevices about the bed where they may hide, and be careful to air the room and bedding after using gasoline. After giving the beds a thorough cleaning, it is easy to keep bugs off the beds by using a little care in inspecting them each day. If you have no gasoline, coal oil can be used, but this leaves an oily condition, which is quite undesirable.

Both the iron and wooden beds can be cleaned without any injury to the paint or enamel by washing a small portion at a time with warm suds and a soft cloth, and then rinsing with clear, cold water and drying with clean, soft cloth. When the whole surface has been gone over in this way, rub vigorously with old flannel or soft pieces of silk until the high polish is restored. Enamel paints cost so little that there is no excuse for letting a white iron bed go shabby, and one or two coats of paint will make it look like a new bed.

One of the best coverings for cool nights in summer is a light-weight comfort made of cheese-cloth or of any thin, soft material, and tied with any of the cheap silks that come on spools or with tidy cotton. For a summer comfort a pound, or a pound and a half at most, of pure white cotton is sufficient for each one, and sometimes nice coverings for these comforts are made from the best breadths of old summer dresses.

A white counterpane looks better and is more easily washed than any other outside covering, and they should be washed by themselves, and not hurried through the weekly washing, and if they are soaked in plenty of warm, soft water, then put into a tub of hot borax suds, they will require no boiling, unless they were very soiled before washing, and they will come out beautifully white and clean. It is best to put them through a strong suds and then through a light borax suds, then put them in a tub and pour boiling water over them, and when this is cold, rinse them through one clear water.

There is nothing better than the borax suds for washing the cotton blankets that are so much used now, as it helps to keep them soft, and by putting them to soak in the suds a very little rubbing gets them clean, and they are almost as easily washed as a cotton sheet and need no ironing.—Martha.

Golden Arrow Seed Catalogue.

The A. W. Schisler Grain Company, 808 North Fourth street, St. Louis, Mo., will send a catalogue of vegetable, flower, field and garden seeds to any of our readers who will write for it. It is called the Golden Arrow Seed Catalogue and is named after their Golden Arrow Seed Corn, which is a very prolific yielder and the cleanest and brightest yellow corn on the market.

Building Farm Houses and Barns.

Building and construction are made easy, simple and economical on the farm. There are manufacturers who have successfully overcome all difficulties. The first difficulty the farmer has to contend with is to draw suitable plans. This is done for him. Original plans cost much money, but the manufacturer has had many plans drawn and the farmer can buy the working plans complete for very little money. The farmer can buy plans of almost any house or outbuildings that he can imagine. He can construct the buildings at home, or he can buy the buildings ready-made. He can buy the lumber at home and buy the millwork at the factory. Foremost in doing all this work for the farmer is Gordon-Van Tine Co., 2482 Case street, Davenport, Iowa, and it will pay any farmer to send 10 cents to pay postage on their Home Builder's Plan Book.

FREE 39 PIECE DINNER SETS FREE

I want to give one of these beautiful American Beauty Rose Dinner Sets to every Lady Reader of this Paper ABSOLUTELY FREE.

My Offer. I will give every lady reader of this paper one of these beautiful 39-piece Dinner sets, decorated with the large, deep glowing American Beauty Rose, the most beautiful rose in the world. Are You Nervous?

Nervousness is often merely a sign of physical weakness, an indication that the body is out of tune. Bodi-Tone, which is offered on trial to every reader, has proven of immense value in nervous exhaustion, tired nerves, jangling nerves and shattered nerves, because its action in toning the body is just what is needed in the big majority of these cases. See trial offer on last page.

To Buy Groceries Right.

Montgomery Ward & Co. have issued a New Pure Food Grocery Catalogue. This firm is well and favorably known as a strictly reliable house, and hundreds of thousands of farmers will testify to this from having bought of them for many years. To get this catalogue, all you have to do is to write a postal card, saying: "Please send us your grocery catalogue as advertised in The National Farmer and Stock Grower." Address, Montgomery Ward & Co., Chicago Avenue Bridge, Chicago, Ill., or to Montgomery Ward & Co., Nineteenth and Campbell streets, Kansas City, Mo. The service is equally as good from either establishment.

The Land Interest.

From Jacksboro, Texas, it was reported on April 22d that the Worthington-Knox Land and Cattle Company had sold to Messrs. E. R. and Warren Worthington, of Peabody and Whitewater, Kas., 11,270 7-12 acres of land for a consideration of $174,952.50. The tract is the old J. W. Knox ranch, which begins just north of the city limits and extends some twelve or fifteen miles direct north, including the west fork of the Trinity river and the Jack county oil fields.

Simpson-Eddystone
Fast Black Shepherd Plaids and Stripes

Durable dress-fabrics are the only kind that "pay to make up."

Smart, stylish spring and summer dresses can be made economically of these superior calicoes which have received the approval of three generations of women.

Their durable well-woven cloth printed in many beautiful designs with intense inseparable color have made them the standard cotton wash goods since 1842.

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

MAY MANTON EMBROIDERY.

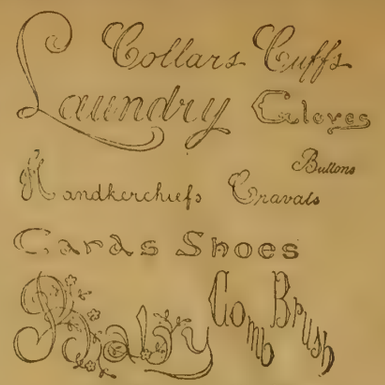
These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Different Size Knots.

No. 564.—This consists of bow knots in various sizes, to be embroidered solidly or outlined, with fancy stitches between. The price of each pattern is 10 cents.

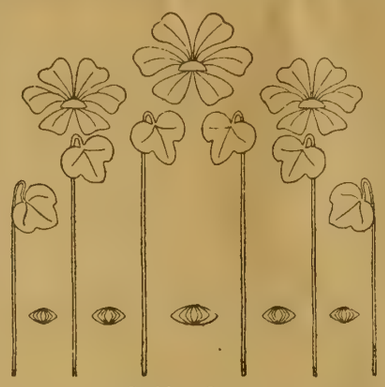
Sofa Cushion or Pillow.

No. 557.—This is a new and elegant design for embroidering an infant's pillow, sofa cushion or centerpiece. The price of the pattern is 10 cents.



Words, Words, Words.

No. 563.—Designs for embroidering words, adapted to different purposes. Very attractive when finished. The price of the pattern is 10 cents.



Cushion Cover.

No. 554.—Design suitable for embroidering a cushion cover seventeen inches square. The price of the pattern is 10 cents.

A Baby's Bib.

No. 561 is a very good design for embroidering a baby's bib, having scalloped edges buttonholed. The price of the pattern as usual is 10 cents.

Three-inch Band.

No. 558.—Designed for a band three inches wide, to be beaded or embroidered. The price of the pattern is 10 cents.

Towel Ends.

No. 559.—Design for embroidered towel ends. The complete design with space for initial is given for one end; scallops are given for two ends. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Work For the Children.

One of the essentials in leading children to like the farm is to get them started in some money-making phase of it. They see the town children working into something which assures spending money and naturally become discouraged if the few dimes allowed them must be asked for when they have really done much hard work. It is all right to dispense with the idea which calls for a "tip" every time a little errand is done, yet it is also right to prove to them that there is a good living to be made upon the farm.

No two farmers are situated exactly alike, and the plan which is adapted to one will not go in another case. If you are dairying, why not assign to each child the milking of a certain number of cows or some other duty connected with the work, paying a certain per cent. of profit when the monthly check arrives from the factory? If they feed the calves and pigs, give them a share in the live stock, and don't make the irreparable mistake of selling their part when marketing time comes and pocketing the proceeds. They will soon measure up the moral side of such a deal, and then it is no wonder if the lure of the town calls them very soon.

A plot of strawberries will not require very much space, and will keep them busy during the berry season at good pay. One tradesman whose health broke moved to a small farm and set out strawberries and raspberries, gradually enlarging his plant as the profits warranted. And his boy when very small prided himself in going out with the pickers and earning his few pennies. More, he learned business principles in general, and this work in particular. The lesson was one of industry, horticulture and commercial methods all in one; further, he was building up a robust physique.

One lad planted Lima beans in two long rows across the garden, and he most carefully weeded and attended to them through the summer. So careful was he of his pets that his "sentinel's path" along the rows became a family joke. Yet his beans were no joke. They proved prolific bearers, and all through the late summer and autumn the family feasted on the returns from his labor, mamma keeping an accurate account of the quantity consumed and paying him the market price for them. If he was proud of his beans, he was still more proud when he had money enough of his very own to go to the city and buy a suit of clothes.

If near a summer resort or a good market, flowers offer a fascinating employment for the girls of the household; and the bunches which retail at five or ten cents each will in a season yield a handsome little sum. For cutting, the sweet pea is easily the favorite, its dainty colors, fragrance, long stems and the enduring quality of the flowers uniting in placing it at the head. If the flowers are freely picked and no seed-pods allowed to form, it will continue to bloom throughout the season.

The nasturtium, the tall-growing sort, is another favorite summer annual. In early autumn comes the aster, the long-stemmed, branching varieties being preferred, with dahlia, chrysanthemum and cosmos following. While from the hardy bulbs planted in autumn we may look for the fragrant hyacinth and gorgeous tulip in spring.

Poultry, wild flowers, nuts and many other things have a cash value somewhere. Study your own neighborhood, what it will yield and what will sell best, and then determine, with their ideas and natural tastes, the work for the little folks. Since there are "off years" in all branches of farm life, it may well to give them early the lesson of having more than one prospective source for profit. But at all events, give them some work that will teach industry and probably yield good wages.—Bessie L. Putnam.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Stock Buyer—I'll lose money on the hogs at $4.52½ unless the market improves by tomorrow. The weight is 3895 lbs. Here is your check for $166.25.

Farmer—There surely is a mistake somewhere. Ropp's New Calculator makes it $176.25. (p. 58.)

S. B. (after figuring it over carefully)—Correct. Here is a $10 bill with your check. Pardon my mistake.

In New York state there are 214,650 farms. Of the total, 3,994 are conducted by managers, 44,603 by tenants, and 165,993 by the owners. The farms average 102 acres in extent. There are only 242 properties averaging over 1,000 acres.

SELECTED POETRY.

THE DAPPLED MARE.

"Once on a time," as ancient tales declare,
There lived a farmer in a quiet dell
In Massachusetts, but exactly where,
Or when, is really more than I can tell—
Except that, quite above the public bounty,
He lived within his means and Bristol county.

By patient labor and unceasing care
He earned, and so enjoyed, his daily bread;
Content always with his frugal fare,
Ambition to be rich ne'er vexed his head;
And thus, unknown to envy, want or wealth,
He flourished long in comfort, peace and health.

The gentle partner of his humble lot,
The joy and jewel of his wedded life,
Discharged the duties of his peaceful cot
Like a true woman and a faithful wife;
Her mind improved by thought and useful reading,
Kind words and gentle manners showed her breeding.

Grown old at last, the farmer called his son,
The youngest (and the favorite, I suppose),
And said: "I long have thought, my darling John,
'Tis time to bring my labors to a close;
So now to toil I mean to bid adieu,
And deed, my son, the homestead farm to you."

The boy embraced the boon with vast delight,
And promised, while their precious lives remained,
He'd till and tend the farm from morn till night,
And see his parents handsomely maintained;
God help him, he would never fail to love,
nor
Do aught to grieve his gen'rous old gov'nor.

The farmer said: "Well, let us now proceed
(You know there's always danger in delay)
And get Squire Robinson to write the deed;
Come—where's my staff?—we'll soon be on the way."
But John replied, with tender, filial care:
"You're old and weak, I'll catch the dappled mare."

The mare was saddled and the old man got on;
The boy on foot trudged cheerfully along;
The while, to cheer his sire, the duteous son
Beguiled the weary way with talk and song.
Arrived at length, they found the squire at home,
And quickly told him wherefore they had come.

The deed was writ in proper form of law,
With many a "foresaid," "therefore" and "the same,"
And made throughout without mistake or flaw,
To show that John had now a legal claim
To all his father's land—conveyed, given, sold,
Quitclaimed, et cetera, to have and hold.

Their business done, they left the lawyer's door,
Happier, perhaps, than when they entered there,
And started off, as they had done before—
The son on foot, the father on the mare.
But ere the twain a single mile had gone
A brilliant thought occurred to Master John.

Alas for truth! Alas for filial duty!
Alas that Satan, in the shape of pride
(His most bewitching form save that of beauty),
Whispered to the lad: "My boy, you ought to ride!"
"Get off!" exclaimed the younger, "'t isn't fair
That you should always ride the dappled mare!"

The son was lusty and the sire was old,
And so, with many an oath and many a frown,
The hapless father did as he was told;
The man got off the steed, the boy got on:
And rode away as fast as she could trot,
And left his sire to trudge it home on foot!

That night, while seated round the kitchen fire,
The household sat, cheerful as if no word
Or deed provoked the injured father's ire,
Or aught to make him sad had e'er occurred;
Thus spoke he to his son: "We quite forgot,
I think, t' include that little turnip lot!"

"I'm very sure, my son, it wouldn't hurt it,"
Calmly observed the meditative sire,
"To take the deed, my lad, and just insert it."
Here the old man inserts it—in the fire!
Then cries aloud with most triumphant air:
"Who now, my son, shall ride the dappled mare?"

—Unknown Author.

RESIGNATION.

There is no flock, however watched and tended,
But one dead lamb is there!
There is no fireside, howe'er defended,
But has one vacant chair.

The air is full of farewells to the dying
And mournings for the dead;
The heart of Rachel for her children crying,
Will not be comforted.

Let us be patient! These severe afflictions
Not far from the ground arise,
But oftentimes celestial benedictions
Assume this dark disguise.

We see but dimly through the mists and vapors;
Amid these earthly damps,
What seem to us but sad, funeral tapers
May be heaven's distant lamps.

There is no death! What seems so is transition;
This life of mortal breath
Is but a suburb of the life elysian,
Whose portals we call death.

She is not dead—the child of our affection—
But gone unto that school
Where she no longer needs our poor protection,
And Christ Himself doth rule.

In that great cloister's stillness and seclusion,
By guardian angels led,
Safe from temptation, safe from sin's pollution,
She lives, whom we call dead.

Day after day we think what she is doing
In those bright realms of air.
Year after year, her tender steps pursuing,
Behold her grown more fair.

Thus do we walk with her, and keep unbroken
The bond which nature gives,
Thinking that our remembrance, though unspoken,
May reach her where she lives.

Not as a child shall we again behold her,
For when with raptures wild
In our embrace we again enfold her,
She will not be a child.

But a maiden fair in her Father's mansion,
Clothed with celestial grace;
And beautiful with all the soul's expansion
Shall we behold her face.

And, though at times impetuous with emotion
And anguish long suppressed,
The swelling heart heaves moaning like the ocean,
That cannot be at rest.

We will be patient and assuage the feeling
We may not wholly stay;
By silence sanctifying, not concealing,
The grief that must have way.

—Henry W. Longfellow.

"KEEPING UP WITH LIZZIE."

When Lizzie Henshaw went to school
She had not very great ambition,
And Pointview was a placid pool
With no pretense to erudition.
The simple life was good enough
For this small town and its affairs
Till Lizzie, getting up to snuff,
Returned from college with her airs.

Whereat Dan Pettigrew, her beau,
Discovering his lowly station,
And all the things he didn't know,
Alike set out for cultivation,
And all the other girls in town,
Who up to that time had been busy,
Inconsequentially got down
To work at keeping up with Lizzie.

"We're off!" said Socrates, the seer,
Whose subsequent surname was Potter,
Observing, as it would appear,
The simple life begin to totter.
And sure enough, from matters plain
And simple-minded contemplation,
Or what in no wise was mundane,
The town began its transformation.

At Papa's Henshaw's grocery
The cost of Lizzie's education,
Together with what had to be
By way of other ostentation,
Resulted in a boosting of
The cost of living till it rested
So far and hopelessly above
What people earned that they protested.

At which the whole community
Put up the current scale of prices,
And dinner, which was wont to be
Of ham and eggs, included ices.
From thrift and counter thrift it turned
To such improvidence of honey,
That half the people in it yearned
To borrow Mr. Potter's money.

The phonograph and limousine
Began to squawk and honk around,
And madam would become a queen
Of fashion exquisitely gowned.
The price of money went so high
That all the financiers grew dizzy,
And notwithstanding Potter's "Why?"
The town went right on after Lizzie.

A very funny tale is this,
And one that very likely could,
With very slight analysis,
Do all of us a lot of good.
Of Lizzies there are everywhere
So many that, with being shown,
Each one of us could here and there
Give up some folly of his own.

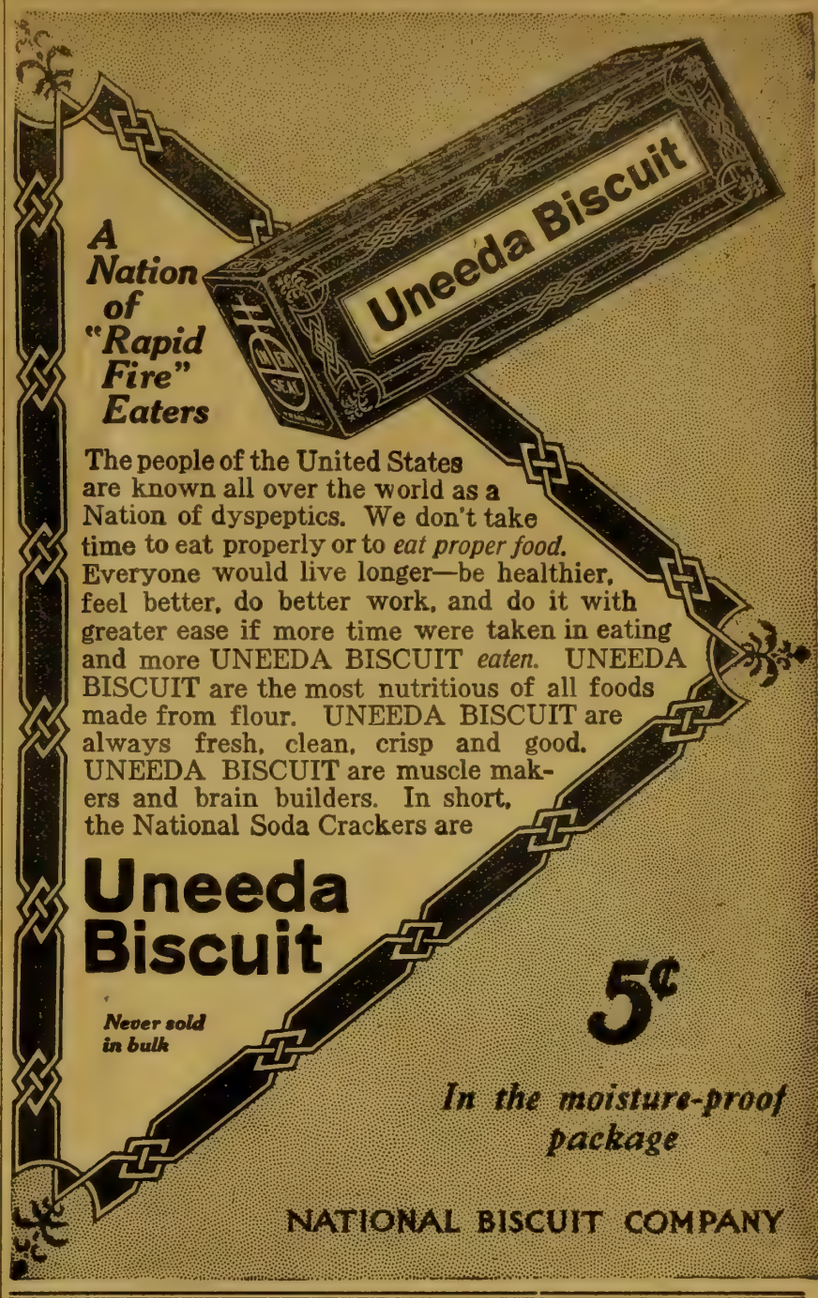
—Irving Bacheller, in "Harper's."

THE LOST LEADER.

Just for a handful of silver she left us,
Just for a feather to stick in her hat;
Neighbor next door was the one who bereft us:
Offered her two more a week—oh, the cat!

They with their gold to give, also no children;
Two maids, a butler, and Sunday night free.
So much was theirs, oh, why did they steal her?
Why did they take my one jewel from me?
We that had trained her to cook, clean and iron,
Fed her policeman, two brothers, a cousin,
Learned all her brogue and subdued her quick temper,
Made her a servant to choose from a dozen.
Swede girls we've tried often, Dutch cooks and Dagoes;
Watch them break all our cut glass and depart;
She, alone, built a light dream for an omelet;
She, through her biscuits, alone, reached our heart.

—Lippincott's.



Uneeda Biscuit
A Nation of "Rapid Fire" Eaters
The people of the United States are known all over the world as a Nation of dyspeptics. We don't take time to eat properly or to *eat proper food.* Everyone would live longer—be healthier, feel better, do better work, and do it with greater ease if more time were taken in eating and more UNEEDA BISCUIT *eaten.* UNEEDA BISCUIT are the most nutritious of all foods made from flour. UNEEDA BISCUIT are always fresh, clean, crisp and good. UNEEDA BISCUIT are muscle makers and brain builders. In short, the National Soda Crackers are

When a person begins to honey around you and acts like you are his best friend on earth, be careful. He has an ax to grind. Don't believe that he means all the taffy he feeds to you.—Lamar Leader.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine.** The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send us a money order for 50 cents we will send the **Universal Magazine** for two years, and we will send one elegant **Universal Magazine Bracelet,** postage free, as a subscription premium. Money returned if not satisfied. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Universal Magazine Bracelet.

All To Win

You Cannot Lose

You cannot lose in trying it, in giving it a chance, in seeing what it will do. You cannot go wrong in testing it for twenty-five days, in doing as hundreds of readers of this paper have already done, for you don't pay a penny *until it is proven*, until you can say, with a heart full of gladness and gratitude, "It is all right. It is the best thing I ever struck. It is an honest remedy. It makes health on the right idea." You run no risk, for we take positively and absolutely all the risk.

You Have All to Win And Nothing to Lose

When it proves it can restore your health, you will gladly pay for it. If it fails, we lose. You have absolutely nothing at stake in trying it, in using it, in seeing if it will not do for you the same wonderful work that it has done for thousands. But you stand to *win* a great deal that you want, the things you have been seeking, the things without which life is miserable—*robust health, full strength and natural vigor of mind and body.* You have all this to win and nothing to lose by trying Bodi-Tone. It is waiting, ready, willing, glad and anxious to have you try it on these fair terms, for it knows its power to cure, to heal, to restore health to the sick, strength to the weak, happiness to the miserable, hope to the hopeless.

Bodi-Tone

does just what its name means—*cures disease by toning all the body*, and we want you to try a box at our risk and see what it will do for *your* body. Bodi-Tone is a small, round tablet, that is taken three times every day. Each box contains seventy-five of these tablets, enough for twenty-five days' use, and we send you the full box without a penny in advance, so that you can try it and learn what it is, so you can learn how it works in the body, how it *cures stubborn diseases* by helping nature to tone every organ of the body. Tone is a little word, but it means a great deal, everything in health. When all the organs are doing their part, when each is acting in a perfectly natural way, when all the functions are healthy and performed with natural vigor, when the energy, strength and power of resistance to disease are all at a natural point, then the body is in proper tone. When disease has attacked any part, the tone of the entire physical body should be raised to the highest possible point, to make all the body help in the cure. This is the power which underlies all of Bodi-Tone's great work for the sick, this is the power it offers you to help you get new health and strength.

Not a Patent Medicine

Bodi-Tone is not a patent medicine, for its ingredients are not a secret. It contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Such ingredients guarantee its merit.

When you use Bodi-Tone you know just what you are using, know it is good and safe and know you are taking the kind of medicine to provide real help for the body. It is a pure remedy that satisfies the most exacting. It contains no narcotics or habit-forming drugs, nothing that your own family doctor will not endorse and say is a good thing. It does not depend on killing pain with cocaine, opium, morphine, or other dangerous drugs. It does not excite the body with alcohol, but it tones the body and cures its disorders with remedies Nature intended to tone and cure the body when that power was given them. Thus, Iron gives life and energy to the blood, Sarsaparilla drives out its impurities, Phosphate and Nux Vomica create new nerve energy and force, Lithia aids in the Kidneys, Gentian does invaluable work for the Stomach and Digestive forces, Chinese Rhubarb and Oregon Grape Root promote vigorous Liver activity, Peruvian Bark raises the tone of the entire system, Golden Seal soothes the inflamed membrane and checks Catarrhal discharges, Cascara gives the Bowels new life in a natural way, and Capsicum makes all more valuable by bettering their quick absorption into the blood. *A remarkable combination that does wonderful work for health.*

All for Health

Each one of these valuable ingredients in Bodi-Tone serves to assist, to help, to build upon the others work. Each adds a needed element from nature to the body. Each has work to do and does it well. They are used because of this ability. We claim no credit for discovering the ingredients in Bodi-Tone, each of which has its own well-deserved place in the medical books of most of the civilized world. We simply claim the credit for the successful formula which we invented, for the way in which these valuable ingredients are combined, for the proportions used, for the curative force which thousands have found in Bodi-Tone, for the cures which make it different from other remedies. Most of these ingredients are as old as civilization itself, for the curative forces Bodi-Tone uses are the forces which have always existed in nature for the restoration of the body's health. Many are regularly prescribed in some form by the medical profession for various diseases and irregular conditions, being used either separately or in combinations with such drugs as each doctor may favor, for there are wide differences of opinion among the doctors of various schools. The *exact combination used in Bodi-Tone* is what gives it the far-reaching and thorough curative and restorative power that makes possible the remarkable cures experienced by Bodi-Tone users, cures which prove the difference between Bodi-Tone and common remedies. That is why we want to send you a box of Bodi-Tone on trial, as soon as you write for it, for we know you will find it different and superior.

You Need It

If you are tired of ceaseless doctor bills and wearied of continual dosing without results, *you need Bodi-Tone right now.* If your local doctor has done you no real good, if you have given him a chance to do what he can and the ordinary medicinal combinations he used have failed, give this modern, scientific combination of special remedies a chance to show and prove what it can do for you. Its greatest triumphs have been among men and women with chronic ailments who had tried physicians and specialists at home and elsewhere without lasting benefit, and for this reason all chronic sufferers are invited to *try it at our risk.*

Bodi-Tone offers its valuable services to you right now, right from this page, if you are sick, if you need medicinal help, if your bodily organs are not acting as they should, if your body is not in right and natural tone. That is what Bodi-Tone is for—to restore health, vigor, vitality and strength by restoring tone to the body.

If there is anything wrong with your Kidneys, Bodi-Tone helps to restore tone to the Kidneys, helps to set them right. If there is anything wrong with your Stomach, Bodi-Tone helps to tone the Stomach, helps to set the wrong right. If there is anything wrong with your Nerves, your Blood, your Liver, your Bowels or your General System, the health-making ingredients in Bodi-Tone go right to work and keep on working day after day, exerting always a definite action that produces curative results of the kind sufferers appreciate. If you have Rheumatism, Bodi-Tone helps to eliminate the Uric Acid from the system while it restores tone to the Kidneys, Stomach and Blood, thereby preventing a continuance of Rheumatic poison and putting new activity into muscles, nerves and joints. Bodi-Tone should be used by all women suffering from any Female Ailment, for its toning properties have been found especially valuable in such ailments. Bodi-Tone should be used by all persons whose bodies are not up to the full maximum of natural vigor, strength and vitality, for its purpose is to restore the body to its highest plane by making health in every bodily function.

We Risk All

Why delay another day, when a trial of this proven medicine is yours for the asking. Why keep on suffering, when by clipping the coupon, filling in your name and address and mailing it to us, you can get a twenty-five days' treatment of this great remedy which has already restored thousands to health, which folks everywhere are talking about. It just costs a stamp and you don't pay a penny unless it benefits you. You take no chances, for the value and curative powers of Bodi-Tone have been amply proven by two years of glorious cures. It is no longer a new remedy, but a remedy with a history—a history of cures that has astonished the doctors and delighted the sick. It has been tested in thousands of cases, covering a great variety of ailments in both sexes, at all ages.

Persons suffering from Rheumatism, Stomach trouble, Kidney, Liver and Bladder Ailments, Uric Acid Diseases, Female Troubles, Bowel, Blood and Skin Affections, Dropsy, Piles, Catarrh, Anaemia, Sleeplessness, LaGrippe, Pains, General Weakness and Nervous Breakdown, have tested Bodi-Tone and fully proven its great remedial value in such disorders.

Their experiences have proven beyond a shadow of doubt how the Bodi-Tone plan of *toning all the body* is a right plan that helps to *cure* these and other disorders. Many who were for years in poor health and tried most all of the prominent medicines, have found that *one single box of Bodi-Tone* did more good than *all* the others combined. Bodi-Tone makes up and repays for past sickness with a *strong and virile health* that is often better than the sufferer knew for a long time before sickness began to trouble. It makes the body right with its maximum strength, vigor and vitality, which it may not have possessed for years previous, even when in fair health. Bodi-Tone works what seems a miracle by *putting tone where tone was needed.* Read the reports on this page, showing how Bodi-Tone cures, send the coupon for a box on trial and try it immediately.

Did Not Do a Day's Work in Over Two Years.

MARTINSVILLE, IND.—About nine years ago I took a bad cough, which later developed into chronic Bronchitis. I doctored with different doctors, but their treatment and prescriptions gave me no relief. Then I became afflicted with Stomach trouble and Liver complaint. I paid out fully eight hundred dollars to the doctors and for medicines, but cannot say that any of it gave me any real benefit. I had not done a day's work for over two years until I took Bodi-Tone. I got more good from one single box of this remedy than from anything I had ever previously used. Its benefits have been real, for I am working every day now, after being sick and idle for two years. Bodi-Tone made me able to do it, after two years of failure.

ANDREW SHIVELY.

Nervous Prostration Made Her Life Miserable.

WEATHERFORD, OKLA.—When I began taking Bodi-Tone I was a nervous wreck, and I feel that I might have been in my grave today had it not been for this wonderful medicine. My Heart bothered me so that I could not rest well day or night and could not hold out to work half a day at a time. I am now feeling better than I have for fifteen years, for it has been that long since I began to run down in health. When I consulted doctors they would tell me that I was run down and needed a tonic, and they would proceed to prepare same for me. If they helped me at all, it would be very little, and I would soon relapse into that awfully tired, worn-out condition. Women will understand how I felt. Since my baby came, two years ago, I have been a walking skeleton, and a year later I collapsed completely. The doctor said it was Nervous Prostration. I thought I was going to die, I was so miserable. At this time I saw Bodi-Tone advertised and procured a box. Before I had taken all of it I had improved wonderfully, and I kept on taking it for a while longer. This was four months ago, and I can truthfully say that I feel like a new person.

MRS. M. WEAVER.

Was Badly Crippled With Rheumatism All Through Body.

GLOVERSVILLE, NEW YORK.—I think there is nothing to equal the Bodi-Tone tablets. I know what they did for me and think they will do as much for others. I haven't felt so well in years as I do since using the Bodi-Tone. I had the Rheumatism all through me so bad that I could hardly move. I had tried most everything for it, but was still crippled when I first began to read about Bodi-Tone. I took one box and found they were helping me, so I got more. It has done the work that nothing else would do, and today I am feeling as well as any man can, considering my age, which is sixty-three. Before using Bodi-Tone I would work two or three days, mostly in misery, and then lay off, but now I am working every day and have not lost a day in months.

JAMES VAN BROCKLIN.

COUPON

Clipped from National Farmer and Stock Grower

Bodi-Tone Company,
Hoyne & North Aves., Chicago, Ill.

I have read your offer of a dollar box of Bodi-Tone on 25 days' trial, and ask you to send me a box by return mail, postpaid. I will give it a fair trial and will send you $1.00 promptly when I am sure it has benefited me. If it does not help me I will not pay one penny and will owe you nothing. Neither I nor any member of my family have ever before used Bodi-Tone.

PERCHERON STALLION—PINK, 24,765 (47,513.) This magnificent draft stallion was several times the grand champion of the breed at the International Live Stock Exposition held at Chicago. The photograph was taken at Oaklawn Farm, Wayne, Ill., the property of W. S., J. B. and B. Dunham. PINK was foaled in France in April, 1900, and won his first Chicago International championship as a three-year-old in 1903, and when exhibited he was shown in the grandest of shape, smooth and level as a die, and called by several of the judges the best Percheron stallion they had ever seen. PINK is one of the thousand champions that will appear in The Book of Live Stock Champions, edition of 1911, that is advertised on page 3. We are preparing a magnificent volume and we are making a special price to all who subscribe and remit in advance of publication.

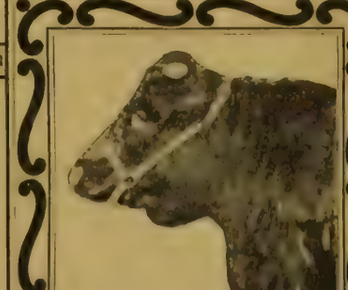
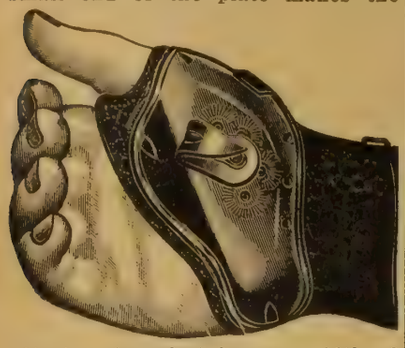
5 Cents a Copy. Published Monthly by The Hale Publishing Co. 50 Cents a Year.

and Stock GROWER



Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the



adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle, the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ESSENTIALS FOR ALFALFA.

Suitable Soils—Sufficient Plant Food —Bacteria in the Soil.

Circular No. 27, issued by the Purdue University Agricultural Experiment Station, Lafayette, Ind., is by Prof. A. T. Wianco, Chief in Soils and Crops. He is high authority and his words are valuable. We cannot give the entire circular, but we reproduce essential parts of it.

Soils For Alfalfa.

Many people make the fatal mistake of expecting alfalfa to do well on soils that are not fit to properly produce any kind of a crop. There is just as much need of care in selecting and preparing soils for alfalfa as for any other crop and probably more, because of its deep rooting habits and large plant food requirements.

Deep, loamy soils with open subsoils are undoubtedly best for alfalfa, but there is plenty of evidence to show that it may be successfully produced on almost any type of soil, from light sandy or gravelly loams and mucks to heavy clays, providing that they are well drained, sweet and properly supplied with available plant food. In 348 trials conducted by this Station during the last five years, 68 out of 83 clays, 167 out of 188 loams, and 69 out of 77 sandy soils gave satisfactory results. Failures seemed to be due to factors other than the types of soil.

Many soils that at present are not fit for alfalfa culture may be made so by providing drainage facilities, correcting acidity, adding organic matter, or supplying needed plant food, according to the requirements. Good drainage is essential in order that the roots may go deep into the soil. Hardpan must be broken up or avoided altogether. Soils that are sour may be made sweet by thorough drainage and the application of lime. A good supply of decomposable organic matter in the soil helps the bacterial action in making plant food available, facilitates the inoculating process, and together with good drainage prevents heaving in the spring.

Muck soils may be used for alfalfa if they are well drained and properly supplied with mineral plant food. Potash is nearly always lacking in these soils and often phosphoric acid and lime must also be supplied. Soils that are subject to flooding are not good for alfalfa.

Soil Fertilization.

Alfalfa requires large quantities of plant food and cannot be expected to do well on poor soils. Its deep rooting habits may enable it to extract more food from the soil than most other crops, but to secure large yields there must be an abundance of food within easy reach, and if the soil is not naturally well supplied, manure or commercial fertilizer must be added. After it is thoroughly established and properly inoculated with its nitrogen gathering bacteria, alfalfa will supply itself with nitrogen from the air, but all potash, phosphoric acid and other mineral food must come from the soil, and as the crop is naturally a large producer, large quantities are required. Of the plant food that must come from the soil, potash and phosphoric acid are most largely required, and these are the two substances in which the soil is most likely to be deficient. Every ton of alfalfa hay which is removed from the land takes with it about eleven pounds of phosphoric acid and forty-nine pounds of potash.

Every alfalfa field should be started with a liberal dressing of stable manure, if possible. Experiments have proven time and again that manure is unusually valuable in starting alfalfa. It not only supplies plant food but improves the physical condition of the soil and facilitates the inoculating process. In many of the experiments conducted by this Station, special inoculation of the soil was found unnecessary when plenty of manure was applied.

When sufficient manure is not available and the soil is not already rich, a high-grade commercial fertilizer should be used. Just what will be required will depend upon the character and condition of the soil. In most instances, however, it will be well to use a fertilizer rich in both phosphoric acid and potash. A mixture containing a little nitrogen, perhaps 2 per cent., and 8 to 10 per cent. of phosphoric acid and the same of potash, applied at the rate of three or four hundred pounds per acre, will be sufficient unless the soil is quite poor, in which case heavier applications may be profitable. The fertilizer should be disked into the ground some time in advance of seeding.

Soil Inoculation.

To get the most out of the alfalfa crop, and, in fact, before it can make its best development, the roots must be inoculated with the proper nodule forming, nitrogen gathering bacteria. In the majority of cases where alfalfa is sown for the first time, it will need to be inoculated by some artificial means. The surest and most practical way to do this is to broadcast and harrow in, before sowing the seed, some earth from a good alfalfa field where the bacteria are known to exist. At least two or three hundred pounds of soil per acre should be used. In securing this soil, care should be taken to secure it from a clean, healthy field so as to avoid the introduction of weed seeds or plant diseases. Care must be exercised, also, to guard against exposing the soil for inoculation to sunlight for too long a time before sowing and harrowing it in, as such exposure is detrimental to the bacteria. Inoculation may also be effected by mixing and drilling in with the alfalfa seed a small quantity of soil rich in bacteria, but the success of this method is not fully established. The use of pure cultures of alfalfa bacteria has not been generally satisfactory, and probably because, with present methods, the bacteria are either dead before they reach the farmer or he is not sufficiently careful in their application. Some farmers are successfully inoculating their soil for alfalfa by sowing some alfalfa seed with clover a year or two before sowing alfalfa alone.

Canadian Wheat Possibilities.

In his speech in Congress, Hon. Joseph G. Cannon, of Illinois, was one of the best defenders of the interest of the farmer. His speech is too long for publication, but we quote what he said concerning Canadian wheat production:

"Now, how much wheat did Canada produce in the year 1909? In round numbers, if I recollect right, 166,000,000 bushels. Where was it grown? All except about 19,999,999 bushels grown in Eastern Canada was produced in Manitoba, in far-away Saskatchewan, in far-away Alberta, with a very little bit in British Columbia. That shows what that new country can do. How much of the land there is under cultivation? Under cultivation in these three provinces last year there were less than 12,000,000 acres. What says the Deputy Minister of Agriculture of the Province of Alberta? George Harcourt, Deputy Minister of Agriculture for the Province of Alberta, in 1909, made this report:

"Of the country which is known the area capable of producing grain is 220,000,000 acres. The total area in crops last year was 11,257,870 acres, producing a total crop of 240,000,000 bushels. The unoccupied land in the future will produce at least 5,000,000,000 bushels. This is not the end. There is a great northern country, the McKenzie Basin, which is capable of producing grain.

Liberty's Tombstone.

A magazine editor at the Authors' Club in New York was talking about H. G. Wells.

"Wells is now the foremost English novelist," he said. "Strange that a man so talented should misjudge us as he does. When he came over here, you know, he found fault with everything.

"One day at lunch, getting tired of his attacks on the tyranny of our trusts and our bosses, I said with a sneer:

"'Well, at least, Mr. Wells, you must admit the grandeur of the magnificent Statue of Liberty that rears its proud head above our harbor?'

"'Oh, yes,' said Mr. Wells. 'You have the same custom as we—you rear your finest statues to the dead.'"
—Washington Star

Kemp & Burpee Company, Syracuse, N. Y.

Please mention National Farmer and Stock Grower.

He Buys His Neighbor's Farm.

"Cattle feeding is not a hazardous business, provided it is done intelligently and conservatively. The man who feeds what he has raised on his own place, carefully husbands the manure and puts it back onto the land, is the man who will buy his neighbor's farm in the future; while the man who hauls all he raises to the elevator is the man who sooner or later will sell his farm. I fully realize that all farmers cannot feed beef cattle, nor is it necessary that they should; but I do believe that every farmer should handle stock of some kind, grow clover, and so treat his land as to increase rather than to decrease its fertility. Cattle feeding is merely one way of doing this; dairying is another; sheep raising another; and growing clover and plowing it under still another."—Capt. W. S. Smith, Sioux City, at Minnesota Live Stock Breeders' Association.

Good Roads and Farm Values.

The value of farming land depends very largely on the distance from a market. A good road has the effect of shortening the time required for carrying a load of produce to market,, which is practically the same thing as shortening the distance. Howard H. Gross, in the Two Harbors (Minn.) News, relates the story of a hard-headed German farmer at Sheboygan, who, in a very graphic and comprehensive way, told of the value of good roads as it appeared to him. He said: "My farm is ten miles from market. If it was only five miles from market it would be worth $15 an acre more. I cannot move my farm in, but if we can build a good road to my farm I can come in the ten miles with my produce easier than I could come in five miles to town."

Louisiana Farm Census.

In the state of Louisiana there are 120,270 farms, against 115,969 ten years ago, an increase of 4,301 farms.

There are 65,400 white farmers in Louisiana, an increase of 7,651 in ten years.

There are 54,810 colored farmers in Louisiana, a decrease of 3,350 in ten years.

In Louisiana, of the 120,270 farms, 52,829 are conducted by the owners thereof; of which number 43,004 are free and clear of debt. There are 944 farms conducted by managers and 66,497 farms conducted by tenants.

The average farm in Louisiana is 87 acres; land alone averages $17.97 per acre, and including value of buildings, $22.69 per acre.

In Louisiana there are 1,013 plantations of 1,000 acres and over; there are 1,548 ranging from 500 to 999 acres; 8,399 from 175 to 499 acres. From this it will be seen that there are 10,960 considerably-sized plantations in Louisiana.

Of the smaller properties there are 13,671 averaging 100 to 174 acres; 20,228 that average 50 to 99 acres; 46,315 ranging from 20 to 49 acres; and 29,096 that are 19 acres or less.

The total farm acreage of Louisiana is 10,519,000, and of this area 5,268,000 acres are improved. The value of land has increased 76 per cent. and value of buildings 49 per cent. since the last census.

Selling Wheat and Buying Bran.

Farmers are selling wheat on their farms at $26 a ton and buying back the bran at $25.48 per ton. If the same farmers were buying the bran who were selling the wheat the railroads would have no wheat to haul.

Extraordinary Announcement: THE BOOK OF LIVE STOCK CHAMPIONS. EDITION OF 1911.

To Contain True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS

Winners in the Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is the Fourth Edition of the most valuable book ever published in the interest of high-class stock raising.

The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Every breed of hogs, sheep and goats will be represented by the best in every breed.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

ISSUED AS A SOUVENIR SUPPLEMENT.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements to Paid-in-Advance Subscribers---To Old Friends and Patrons.

It is worth something for a publisher to know how many books to print and bind. We therefore offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies will be handsomely printed and elegantly bound in red cloth, with gilt title. This is an extraordinary offer. After publication the cloth-bound copies will cost Two Dollars a copy without the subscription.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of The Book of Live Stock Champions, cloth-bound edition of 1911, immediately after publication.

The Corn Market Situation.

This item is written May 31st, after the close of the grain market. At the Chicago Board of Trade, May 31st, the May option expired at 52⅜ to 52½c. a bushel; the July option closed at 53¼ to 53⅜c. a bushel, and the September option. closed at 53⅞c. a bushel.

If farmers were as well able to feed out their wheat as they do their corn, there would be larger wheat crops and better prices. The farmer has practically held the price of corn steady for the past four months by just simply not allowing speculators to take it away. It appears as though the people who trade in corn believe there will be a steady to strong market.

Wheat Market Situation.

The date of this article is May 31st, after the close of the wheat market. The business day for the delivery of the May option was over and the goods were delivered. In St. Louis one man who did not want to accept it had to receive and pay for 100,000 bushels in one day. Chicago dealers equally indisposed took in 900,000 bushels at a price they did not care to pay, but they had to pay it or go out of business. The May option closed at $1.04⅜ a bushel. Notwithstanding it was a bona-fide market and every bushel was paid for, it was a strained market. Had it not been for the fear that Canadian wheat would come in free of duty before the close of the May option the wheat market would have been stronger for the last sixty days. As the Canadian cloud cleared away from the May option the market did advance legitimately to about 99 cents, and all above that to the closing price was what may be called a "squeeze." The May option closed out about 14 cents higher than it was quoted a month ago.

But the next option for July 31st delivery is one in which the new crop has an influence. The July wheat option closed on May 31st at 89⅛c. a bushel, which is about 5 cents lower than it was quoted January 31st. This figure is the true indication of the wheat market situation for the next month or two. The market may advance later on, but the September quotation, which closed May 31st at 87⅝c. a bushel, is the expression of opinion which no one can safely ignore. The cloud of the proposed bogus reciprocity bill hangs over the wheat market and it will hang there until the bill is defeated.

All Seeds in Season.

The A. W. Schisler Grain Company, 708 and 710 North Fourth street, St. Louis Mo., will send a catalogue of vegetable, flower, field and garden seeds to any of our readers who will write for it. It is called the Golden Arrow Seed Catalogue. This firm will furnish estimates promptly for all field seeds in any quantity.

The Oats Situation.

This reference to the oats market is dated Wednesday, May 31st. The day's work is done and on the Chicago Board of Trade the May trading in oats is closed out at 34½ cents, being 3⅜ cents higher than the same option was quoted thirty days before. The July option closed at 35½ cents a bushel, nearly 4 cents higher than thirty days previous, and the September option closed at 35⅝ cents, about 4 cents higher than thirty days before. We believe that the oats situation will hold the gain it has shown in price. For this little we ought to return thanks, but there ought to be more coming. Oats are too low, even at 40 cents on the farm, and many a million of bushels have been sold at 25 cents. We close this item with a few words from a trader's circular:

"Allowing for a loss of 2,200,000 acres of oats from the immense acreage of last year, 35,288,000, and a condition of 80, which is the lowest for June in over eleven years, it suggests a crop of 963,000,000 bushels, which has only been exceeded three times on record. The crop last year was 1,127,000,000 bushels and the June condition 91 and at harvest 83.3. The oats are heading short this year, and some reports are very unfavorable."

Bringing Him Back to Earth.

The attorneys for the prosecution and defense had been allowed fifteen minutes each to argue the case. The attorney for the defense had commenced his argument with an allusion to the old swimming hole of his boyhood days. He told in flowery oratory of the balmy air, the singing birds, the joy of youth, the delights of the cool water—

And in the midst of it he was interrupted by the drawling voice of the judge.

"Come out, Chauncey," he said, "and put on your clothes. Your fifteen minutes are up."—Success.

Broom Corn at St. Louis.

Late May quotations, per ton, in car lots on track: Poor to fair, $40 to $60; good average run at $70 to $80; fancy and long brush, $90 to $100 Hurl brush in urgent demand and salable considerably above quotations.

LAMENESS IN HORSES.

There are so many horses throughout the country going lame on account of trouble in the navicular joint that W. F. Young, P.D.F., 106 Temple street, Springfield, Mass., has issued a special instruction sheet outlining an effective method for overcoming the trouble and getting animal sound.

An animal with trouble at the navicular joint usually is crippled in forward shoulders, drives out of soreness and lameness, goes tender on rough, hard roads, and when resting points affected foot.

The navicular instruction sheet referred to above is well worth having, and Mr. Young sends it free on request.

St. Louis Cash Grain.

Cash grain means grain sold by sample delivered by car-load and collect the money the same day. This being a monthly paper, we can only quote the market once a month. The quotations following represent basis of cash transactions at St. Louis on May 31st, 1911:

Wheat—No. 2 red wheat at 91 to 94c.; No. 3 red wheat at 83 to 88c.; No. 4 red wheat at 75 to 81c.; No. 2 hard wheat at 90 to 96½c.; No. 3 hard wheat at 89 to 92½c.; No. 4 hard wheat at 80 to 85c.

Corn—No. 2 corn at 52 to 52½c.; No. 3 corn at 51½ to 52c.; No. 4 corn at 49¾ to 50c.; no-grade corn at 47½.; No. 2 yellow corn at 52c.; No. 2 white corn at 53 to 53¾c.; No. 3 white corn at 52½ to 52¾c.

Oats—No. 2 oats at 32½ to 34c.; No. 3 oats at 33c., n.; No. 4 oats at 32c.; No. 2 white oats at 35½ to 35¾c.; standard oats at 35 to 35¼c.; No. 3 white oats at 34¼ to 35c.; No. 4 white oats at 34 to 34½c.

As compared with the closing day of the previous month wheat is a cent or two stronger, corn is about the same, and oats about a cent and a half higher. Any farmer can ascertain the rate per bushel to market and then form an idea of what his grain is actually worth on his own farm.

Alfalfa and Boiled Clothes.

Ex-Gov. Alva Adams was the guest of honor at the recent alfalfa banquet in Rifle, Colo.—a banquet wherein appeared alfalfa biscuit, alfalfa-stuffed turkey, mashed alfalfa (far better than mashed potatoes), alfalfa-leaf spinach, alfalfa tea and cider, alfalfa salad and alfalfa toothpicks.

"Alfalfa is delicious" said Mr. Adams at the banquet's end, as he drew his napkin across his mouth. "I have eaten and drunk heartily of it. I can only speak of it in terms of the highest praise.

"The people misjudge alfalfa. They misjudge it as the 'biled clothes' story misjudges the civilization of the West.

"According to this libelous story, a Harvard professor visited the West on a geological expedition. In Albertus he put up with a rancher. The first night on the ranch he slept in his clothes, like the rest of the boys, out of politeness, but the second night he complained about this.

"'I can't stand it,' he said to the rancher. 'I don't seem to get my rest. My boots especially incommode me.'

"So the hospitable rancher stretched a cowskin across the shack and that night the Harvard professor slept in his long white nightgown by himself.

"At daybreak the night foreman came in while the professor was still slumbering. The foreman cast one glance at the sleeper, then tiptoed forth and said to the rancher:

"'Rather sudden, wa'n't it?"

"'What?' the rancher asked.

"'Why, the death of the old prof.'

"'He's not dead,' said the rancher; 'he's sleepin'.'

"'Then what in tarnation is he wearin' them biled clothes for?' snorted the foreman. 'Never saw a chap laid out in biled clothes afore 'ceptin' he was dead.'"—Exchange.

For Beginners With Sheep.

A practical sheep keeper who writes for Farm, Stock and Home, gives this excellent advice to farmers who are just beginning with sheep:

Do not start into the sheep business too heavily. Start with a few at first and grow, yourself, as the flock grows.

The sheep business, like any other, has its ups and downs. One year does not give it a fair trial, especially if it is your first one.

Keep the flock healthy. Unthrifty sheep never make money.

Use feed carefully but plentifully.

Do not try to use moldy feed. It will not pay in the end.

Use grain if necessary to strengthen weak ewes and grow out the lambs.

Healthy, well-conditioned sheep do not readily become infested with worms or other parasites. Feed is more beneficial than worm powders or prepared tonics.

A few moments given regularly each day to the care of the flock will accomplish more than hours spent promiscuously "when it is convenient."

Give the sheep exercise every day. Feed them their fodder outside, even on cold days. They are well clothed and will keep warm.

Avoid coarse hay like stiff timothy, bromus and blue joint, as it causes digestive disturbances.

Leafy forage is more nutritious than that that has an abundance of stems. Strawy feeds are all right to pick over, but not to furnish the bulk of the diet.

Snotty noses are the sure outcome of draughty barns. Fresh air without draughts must be arranged for.

Is the bedding clean and dry? Stale, musty bedding not alone promotes the growth of disease germs but also stains the fleece, making it less valuable on the market.

Tanks for fresh water must be so arranged that sheep can have free access to them without danger of falling in.

Early Watermelons.

The first full car-load of watermelons in the St. Louis market this season sold on May 30th at wholesale for an average of 62 cents apiece. They were shipped by H. Wolfert, of Leesburg, Fla., and consigned to Henschen & Goerner, commission merchants. The car contained 1,000 melons, weighing about twenty-five pounds each. They were disposed of in lots of 100, and, being sold by the pound, brought 62 cents each at wholesale.

The Sufficiency of the Census.

We congratulate the United States Department of Commerce and Labor upon the census so far. Every day we receive something valuable, some new evidence of remarkable ability in gathering and compiling agricultural statistics, the practical information concerning farms and farm property, live stock, principal crops, farm tenure, farm expenses, etc. We receive it in sections, in bunches, by classification, by county, by state, comprehensive to the minutest detail. The work of the census is speedy, the comparisons are perfect, and the whole arrangement is satisfactory. This is but a preliminary vote of thanks to show appreciation of the magnificent service being performed.

The Strawberry Culturist.

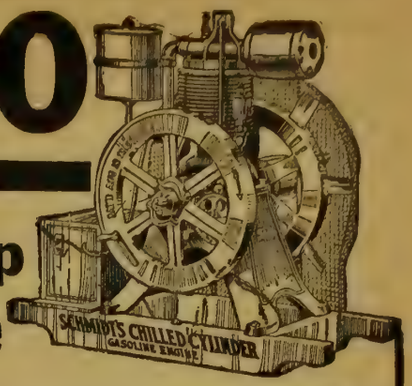
This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner

should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for Sixty Cents. This is a splendid opportunity to get a good book for the cost of postage. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Home Mixing of Fertilizers.

By writing to the German Kali Works, Continental Building, Baltimore, Md., any farmer can obtain a booklet entitled "Home Mixing of Fertilizers and How to Do It." This is a very interesting publication, and every one of our readers can learn something from it. The whole story is told so clearly that it does not require an interpreter. The book includes a table giving the composition of all farm manures and commercial fertilizers, with formulas adapted to all crops and the amount of fertilizer ingredients taken from the soil by all farm crops. Send for it without delay. See advertisement on page 14.

$7.50



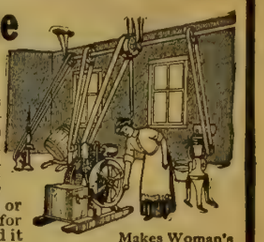
And You Keep This Great Engine

Yes, sir, that's right—you keep this engine for $7.50, a wonderful gasoline engine offer, an offer without a parallel. We ship you Schmidt's Chilled Cylinder Gasoline Engine on your simple request without an order or any promise from you. You use the engine 10 entire days, use it all you want to. Then if you don't want it, send it back at our expense. If you do wish to keep it, pay us only $7.50 and the rest in the easiest monthly payments. We send you the engine free, to prove that it is the greatest air cooled 3 horse power engine on earth. It is the only engine with the marvelous, powerful chilled cylinder. The only engine for farm use with a spark retarder. The new type gasoline engine that has revolutionized the gasoline engine industry. The only engine good enough to send out on actual free trial without a cent down in any way.

Ten Days' Trial FREE

This is the first genuine free trial ever offered on gasoline engines for farm and shop use. We want you to see that women and children can run this engine. Use the engine to run any machinery you have—the pump—separator—washing machine—corn sheller—grinder—anything. Engine is ready to run when you get it. We will send you prepaid our sensational offer and our very useful book "How to Use Power" free.

Long Time to Pay



If you like this engine after trying it out for ten whole days you can keep it and take long time to pay for it on **easy monthly payments**, or after using it free for ten days, just send it back at our expense.

Makes Woman's Work Light and Easy

5 Years Guarantee Schmidt's Chilled Cylinder Gasoline Engine is absolutely guaranteed for 5 years in every piece and part. The biggest bank in Iowa backs our $1,000 challenge offer.

How to Use Power To all who will write promptly we will send our useful book "How to Use Power" free. Send us your name and address today.

Schmidt Bros. Co. Engine Works, Dept. 3135. Davenport, Iowa

"And this is just as well, too, for what the old German practitioner once said of himself used to be true of many a doctor.

"'Tell me, sir, what was the most dangerous case you ever had?' a young physician asked this aged man.

"'My medicine case,' was the prompt reply."

Distracting.

"What drove the lady exchange editor crazy?"

"Reading of bargains in cities a thousand miles away." — Toledo Blade.

Drawing a Straight in Texas.

Colonel Cecil Lyon, the Republican National Committeeman from Texas, was induced one evening to sit in a poker game in New York. The play had been in progress for about an hour when a newcomer, rather the worse for strong drink, bought a stack of chips.

On the next hand dealt the Colonel had three aces "pat." The newcomer drew three cards and the Colonel said, in a nonchalant, bored manner, he guessed he would take one. Then the betting began and grew fiercer and fiercer. Every time the Colonel raised the stranger raised him back again. Finally Lyon called.

The other man spread out an ace high straight. He had held the king and ace and drawn the ten, jack and queen.

The Colonel, looking like a man at the funeral of a dear relative, remarked in shrill tones:

"Down in my state when a man draws cards like that somebody else draws a gun."—Popular Magazine.

Where the Danger Lay.

Dr. W. W. Keen, the noted Philadelphia surgeon, praised, at a dinner, the results of animal research.

"Animal research," he said, "has given us serum therapy and countless other blessings. Drugs, in the healing art, are retiring farther and farther into the background.

CURED SPAVINS—BEST ON MARKET.

39 James St. South, Hamilton, Ont., 7-19-'09.

DR. B. J. KENDALL CO.:

Dear Sirs:—Kindly send me one of your Treatise on the Horse. Might state here that we are never without a bottle of your Spavin Cure in our stable, as we believe it to be the **best on the market and have cured several spavins.** Very truly yours,

J. Irwin Van Fleet.

WOOL MEN!

We can interest you. Do you know that St. Louis is a **Spot Cash** market? In 20 years we have handled **more separate lots** of wool, each season, than any other commission house here. Over **40 years' experience** in the business, and your shipments receive our personal attention. We guarantee **top prices, quick sales** and **prompt cash returns.** Write for our 1911 Wool Circular, giving full particulars and points in regard to the preparation of wool for market. Wool Sacks, Shipping Tags, Market Reports, etc., sent Free upon request.

Write what you have to offer. Estab. 1874.

A. J. CHILD & SONS, St. Louis, Mo.

How He Feeds His Pigs.

"How I Feed My Pigs From Weaning Time to Six Months of Age" is as follows:

To begin, I would not wait until they are weaned. I want them accustomed to good food by the time they are weaned. As I am situated without the use of cow's milk, I feed to keep up as good a flow of milk from the sows as possible. I will not keep a sow that is not a good milker and of an early, rapid maturing quality.

In this way, by having the pigs accustomed to feed whilst suckling, the weaning period is not known.

As to feed, I use such feeds as are on the market from flouring mills, bran and shorts. By this mixture, which is a balance to corn, I can make a pretty free use of corn, to which I have the pigs accustomed when suckling.

I have my pigs out on open pastures with plenty of range, good, pure water, no pools or mud holes, with comfortable sleeping quarters and plenty of shade for hot weather.

In feeding, I do not permit feed to lay in feeding places from one feed to another, to become stale and sour, but feed what will be eaten with a relish and cleaned up with an appetite for more.

As before stated, I make a pretty free use of corn, which is the product we propose to manufacture into pork with good pasture such as we may have.

Clover is preferable, although blue grass is indispensable, as that is the grass we always have, especially early and late in the seasons.

Pigs fed and grown as I speak of are in condition to accept of the treatment from any change by virtue of new ownership, which is so frequent at this age.

My method of feeding and the condition that pigs are in prepare them for the usual ordinary treatment of a buyer. Whereas pigs crowded at the time and up to six months old produce an oversupply of fat, which is detrimental to their future breeding developments, and destroys the real value as a breeder. If intended for the market at six to eight months this sppply of flesh is an accumulation for the purpose needed. If for breeding purposes, growth is the essential feature, a good condition of the system is the proper channel through which to reach this growth.

This is by an Iowa breeder in the American Swineherd. By the way, our readers are reminded that the American Swineherd is published monthly at 50 cents a year. The National Farmer and Stock Grower is published monthly at 50 cents a year. We have a clubbing arrangement whereby to new subscribers we are enabled to offer both papers for one year for 50 cents. This is a summer proposition which any of our readers will do well to take advantage of.

Always a Profit in Hogs.

"When hogs for some time bring more than ordinarily high prices the tendency and temptation are for rushing pell-mell into swine raising, and likewise to be forgetful of quality in obtaining quantity. It has always been so, and probably always will be. But the author's observation is, that it has taken persistent and skillful mismanagement to lose money in hog raising with prices as they have ranged for thirty years past, barring, of course, some such epidemic as the so-called cholera. There is no branch of farming or stock husbandry which, conducted with a reasonable amount of fair horse sense and stayed with systematically, one year with another, will do better by its proprietor and more successfully keep the wolf and sheriff from his door than the rearing of well-bred swine. This, if he is satisfied with reasonable gains and such substantial, steady growth as pertains to the better class of farming, conducted with skill and intelligence. If the experience of the best men is worth anything; if their observations and bookkeeping have any value as standpoints from which to judge, there is surely a profit in wisely-bred, wisely-fed hogs, and there always has been, at any price for which they have been sold two years in succession within the observation of men now in active life."—From Coburn's "Swine in America."

First Texas Watermelons.

On May 19th the first car-load of watermelons of the season of 1911 was shipped from Harlingen, Cameron county, in the Rio Grande valley. Harlingen is located on the St. Louis, Brownsville and Mexico Railway, 350 miles south of Houston and twenty-five miles north of Brownsville.

THREE-YEAR SUBSCRIPTIONS.

Orders For The National Farmer and Stock Grower Solicited.

Kindly Sign the Blank Form Below and Become a Regular Subscriber.

We desire to invite attention to our three-year subscription proposition. We hope to obtain one hundred thousand additional subscriptions during the present year to continue for three years. It is practically a trial subscription and payable at the end of the first year. The subscription can be stopped at any time by paying for the period the paper is taken. This method of taking subscriptions is the invention of Uncle Piper, our subscription editor, who has guaranteed that every one of them will be paid when they are due. The subscription price of this paper is $1.00 for three years, and the bill for the subscription is sent to the subscriber at the end of the first year. When the bill goes out Uncle Piper slips in a list of handy premiums for the subscriber to select one from, providing he pays the bill promptly, and the general result is that the bill is soon paid. When it comes to getting subscriptions from intelligent, high-class farmers, Uncle Piper is at the head of the class.

Uncle Piper.

SUBSCRIPTION BLANK.

To the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — You are hereby authorized to enter my name as a subscriber to The National Farmer and Stock Grower for three years. At the end of the first year I will pay One Dollar for the three-year period. This order is given with the understanding that I am at liberty to stop the paper at any time by paying the subscription to that date.

How To Have Hog Health —Use Merry War Lye

Will you take a little friendly advice Mr. Hog Raiser, from one who wants to see you *increase* your pork profits? Then, please listen to this:

Just keep a supply of "MERRY WAR" LYE on hand, and mix and feed it with slop the year 'round. This *simple, easy, inexpensive* method will surely solve your hog troubles, for "Merry War" Lye was specially prepared to *prevent* and *cure* worms and cholera in hogs—*and does it!*

Save Those Fat Sides and Shanks

You know very well what it means when a hog loses interest in life and slinks around with a vacant stare in his eyes, hair standing up, appetite, growing less as he gets *thinner* and *thinner* every day.

Right *here* is where you want to get *busy*, Mr. Hog Raiser, if you want to save your carefully nursed profits in flesh and fat. For you'll never — NEVER — "cash in" on those fast vanishing sides and shanks, unless you *quickly* prevent Mr. Ailing Hog from passing in *his* checks and becoming food for the *rendering vat* instead of prime hams and bacon for the *breakfast table.*

"Merry War" To The Rescue

Now, don't *blame* the Sick Hog! *Cure him!* Help him and fatten your pocketbook — by using "Merry War" Lye, the only absolutely unfailing, *sure* specific for worms, cholera, and *all* hog troubles.

And remember this: An ounce of prevention is worth a pound of cure," when it comes to the matter of hog health. Don't wait until your hogs are down sick, *but keep them well.*

It's your fault, if they are not *always* in prime condition, because it's simply a matter of a little common sense and a little "Merry War" Lye.

Just Try This

Tablespoonful "Merry War" Lye mixed with slop for ten hogs, or one-half can with barrel of swill for larger quantity. *Stir well, feed night and morning.*

In a few days see *marked* improvement in your hogs. It cleanses the system, tones the digestive organs, puts sick hogs in *prime condition* and renders them *immune* from contagious diseases. This trial will convince you and the *expense* is too *trifling* to think about.

None "Just As Good"

Ask your dealer for "Merry War" Lye — and *insist* on getting it! There are *other* brands of lye put up for certain household uses, but only *one*—"Merry War"—is absolutely *safe* and specially prepared for *preventing* and *curing* cholera, worms and all hog diseases.

Explain this to your dealer, and if he can't supply "Merry War" Lye, write us and we will tell you of a dealer who can. We will also send you a valuable book—FREE—on *"How to get the biggest profits from Hog Raising."*

"Merry War" Lye comes in 10c cans or 24 for $2.00, at Grocers' or Druggists'. Ask for it today sure.

E. Myers Lye Co., Dept. 22 St. Louis. Mo.

The Past and Future of Hogs.

We have been asked to give our views concerning hog raising in the United States, with special regard to future prices. The answer we made by letter was, that so far as prices are concerned, we expect history to repeat itself, for hogs to be high at times and occasionally hogs will be low; prices will change from day to day; but hogs will be profitable under any and all circumstances, providing the hogs are raised under sanitary conditions, grazing and grain feeding going hand in hand for the production of early-matured hogs, 225 to 275 pounds average. A farmer who has raised hogs for forty years said: "I have never known the time when hog raising was unprofitable unless they were diseased and died before reaching the butcher, and I expect hogs to sell better in the future than in the past."

According to the United States Department of Agriculture, we have not to-day an average supply of hogs. We had more in 1906 to 1910; we had more in 1889 to 1902; and in the year 1901 we had six to seven millions of hogs more than we have now. It is therefore safe to assume that the market will not be overcrowded in the future as in the past. In the last three years at eleven principal markets the weekly average in 1908 was 535,000 hogs; in 1909 the average was reduced to 439,000 hogs; and in the year 1910 the weekly average at eleven markets was 375,000 hogs. In 1908 eleven markets received 27,826,000 hogs, and two years later the total was reduced to 19,523,000 hogs. In the year of the greatest supply all grades averaged $5.70 per 100 pounds, and in the year of the highest prices the average was $8.90, and the lowest average in ten years was $5.15 per 100 pounds.

Unless in time of drouth, which no one can foresee, this Western country is sure to raise more hogs than are raised anywhere else in this world. Furthermore, a few million hogs more or less in numbers or a few pounds more or less in the average weight cut no figure. The demand, however, must come from prosperous people in order to pay the producer a fair profit. The prosperous people must be our own people. It does not avail anything that foreign countries shall be prosperous. Exports increase when prices are low and exports decrease when prices are high. It is our own ninety-two million people that we must look to for prosperity in hog raising, or cattle raising, or sheep raising. We must advocate such laws that will make the people prosperous and then see that no one feeds them but ourselves. One condition can always be calculated upon, and that is, the increase in population that has to be fed.

See first page for index of paper.

COUGHS and DISTEMPER

FRAZIER'S DISTEMPER CURE

Among Colts, Mares and Stallions cured with one bottle of **FRAZIER'S DISTEMPER CURE**, or your money refunded. One dose placed in trough or feed will prevent all cases. Influenza, Pink-Eye, Catarrhal Fever, Colds and all forms of Nose and Throat Troubles cured in four to eight days. $1.00 bottle holds three 50-cent size bottles. Send postal for free booklet on the horse. Sold by druggists or prepaid from

BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

Drilling Alfalfa.

It is generally conceded that alfalfa when drilled in rows six inches apart does better than when sown seven or eight inches apart. It is generally admitted that drilling the seed in rows is better than to broadcast. Therefore if a farmer buys a seven or eight-inch drill he is compelled to plant the way the drill is set. However, the Hoosier Grain Drill, manufactured by The American Seeding-Machine Co., Incorporated, Richmond, Ind., is an exception to the rule, because a farmer can change the spacing between the disks so as to plant his small grains seven or eight inches apart, and then sow his alfalfa six inches between the rows. This is a feature to be found on no other grain drill than the Hoosier. When you buy a Hoosier Drill you get full value for your money, and it is sold under a guarantee that means much to the purchaser. Hoosier Grain Drills have positive force feeds, great strength, light draft, simplicity and no complications. Open or closed delivery single disks, double disks, shoe or hoe furrow openers can be obtained on the Hoosier Drills. They can also be obtained in plain grain and combined grain and fertilizer styles. No matter where you live or what your seeding conditions may be, there is manufactured a Hoosier Drill that will do your work right. Send to the manufacturers for their Hoosier catalogue, and ask for any special information you may want. After you have read this catalogue, go to your nearest implement dealer and insist on seeing the Hoosier Drill.

"International" News Items.

The Directors of the International Live Stock Exposition held their Spring or Classification Meeting in the rooms of the Saddle and Sirloin Club, Union Stock Yards, Chicago, Ill., on Friday, May 12th, 1911.

One of the incidents brought to the attention of the Board was the death of Richard Gibson, of Delaware, Ont., who had rendered able service to this institution both as Vice-President and Director. The following resolution on the death of this veteran breeder was unanimously adopted:

"Whereas, Mr. Richard Gibson, Vice-President of the above association, has been removed from this earthly scene,

"Be it resolved, That the sympathies of the above Board of Directors be tendered to his widow and family; and be it further resolved and placed on the records of the association that it has lost one of the brightest lights, a man whom we all honored for his sturdy honesty and wise counsel and whose genial presence will remain ever with those whom he has left behind."

It was decided to hold this year's "International" Live Stock Exposition from December 2d to 9th, and as no Horse Show is to be held, to devote the evenings to Horse Show features.

It was found that several of the Live Stock Breeders' Associations had voted increased appropriation for special prizes to be offered by them in connection with this year's show.

A very few changes were made in connection with the rules. It was, however, decided to change the one governing the removal of animals shown in the car-lot division, so that they may now be removed from the district in which they were bred sixty instead of thirty days prior to the opening of the show.

While the rule governing eligibility of feeder cattle from the Southwestern district was changed to read: "Feeder cattle emanating from the Southwestern district may be fed cotton-seed hulls and cotton-seed cake on grass while remaining on their native pastures."

It was decided to give the Percherons and the so-called "French Drafters" each a separate classification at the 1911 Exposition.

It was the consensus of opinion that the 1911 Show would, in every respect, outclass any of its predecessors, and it was decided to put forth an organized effort to bring about this result.

Goverment Figures.

Comparing the figures on the cost of producing corn with the cost of producing wheat it is observed that cost of corn production in 1909, including the item of rent or interest on investment, was 37.9 cents per bushel, or $12.27 per acre; wheat cost 66 cents per bushel, or $11.15 per acre.

The excess of value of the crop over cost for corn was 64 per cent. and for wheat 50 per cent. The average size of a corn field in the United States is about 30.2 acres, and of wheat 50.6 acres. The value of corn-growing lands in 1909 averaged $50.46 and wheat lands $54.59 per acre.

Not a Reciprocity Treaty.

[From Speech of Hon. Wm. E. Humphrey, of the State of Washington, in the House of Representatives, February 14th, 1911.]

There is no reciprocity in this so-called treaty. Reciprocity carries with it the understanding that you are to get something for giving something. In this treaty arrangement the United States gives everything and gets nothing. At best this bill would only open up the markets of each country to the same class of produce produced in each country. We are not giving our markets to Canada, and Canada is not giving her markets to us, but both countries propose to open up their markets to the products of each country. Each country under this arrangement may supply the entire market for both countries. This is not mutual benefit; this is competition. This is not reciprocity; this is commercial war. This bill is not reciprocity; it is predigested tariff revision given us to swallow according to directions; it is a new political breakfast food, compounded in secret by concealed and unknown wise men, warranted to be good for the nerves of anemic free traders, especially those who still claim to belong to the Republican party.

This so-called treaty is worse than free trade. If we are to have free trade, let us do it at once and make an end of the thing, and let the country adjust itself as best it can to the conditions; but let us stop this false pretense of reciprocity, this coming to free trade by piecemeal. This constant changing of schedules under one pretense or another, this going to free trade by cutting off one protected industry after another, is founded upon the same wisdom and logic that inspired a certain old and kind-hearted German gentleman dealing with his dog. This free-trade philosopher lived in a small village, and every morning the howl of his dog disturbed his neighbors. Finally one of his friends made bold to ask the reason for this periodical disturbance caused by the brute. The old gentleman replied that he was a kind-hearted and philanthropic citizen, but he believed it was to the best interest of his dog that his ears should be cut off; so, in order to hurt the dog as little as possible, and to permit him to adjust himself to changing conditions, he was taking off a small piece each day. This is the enlightened philosophy of free trade by piecemeal. Such process would be as kind to the business of this country as was the method followed by the old gentleman to his dog.

The Howard Watch

So many men waited so long for a *practical* thin watch—that it is no wonder the HOWARD 12-size *Extra-Thin* model took the country by storm when it finally appeared.

It is about as flat as two silver dollars—and it is the only thin-model watch that measures up to the HOWARD standards of accuracy as a timekeeper.

The HOWARD watchmakers are the most expert *practical* horologists in the world.

They kept working on the HOWARD 12-size Extra-Thin until they had overcome the difficulties and perfected a watch fit to bear the HOWARD name.

It has the HOWARD *hard-tempered* balance-wheel—a special HOWARD discovery (*exclusive and patented*), which does away with the strain of jolt and vibration.

It has the exquisite HOWARD *adjustment* to extremes of heat and cold, to isochronism, to *positions*. Thin, neat, compact—in appearance as in performance it is a thoroughbred.

As an investment for service—for superior convenience—or for the sheer pleasure of owning the finest thing of its kind—it is worth all you pay for it.

HOWARD Extra-Thin watches are sold at *fixed prices* by HOWARD jewelers everywhere—from the 17-jewel in a Crescent of Boss gold-filled case at $40 to the 21-jewel in a 14K solid gold case at $135.

Find the HOWARD jeweler in your town. When a man makes a permanent investment like the purchase of a HOWARD Watch he naturally wants to *see* what he is buying—he wants to get the dealer's expert advice. The HOWARD Watch is sold only by legitimate jewelers—and not every jeweler can sell you a HOWARD. The jeweler who can is a representative merchant—a good man to know.

Send us your name on a postal card and we will send you—FREE—our pamphlet—THE STORY OF EDWARD HOWARD AND THE FIRST AMERICAN WATCH. It is a chapter of History that every man and boy in this country should read.

Argentine Live Stock Exports.

The United States Department of Commerce and Labor reports that the fees formerly paid to the Argentine authorities for the issuance of health certificates on live stock exported from Argentine have been suspended. This action has been taken by the Argentine government in order to assist the exporters in supplying the demands of foreign markets for Argentine cattle.

CONGRESS AND THE FARMER.

Several Measures in Congress Ought to be Defeated Because They Are Detrimental to the Farmers' Interests and of No Real Value to Anyone Else.

Newspaper publishers are offered the inducement that if they will assist in passing the bogus reciprocity bill, which is injurious to the farmers' interests, they will get cheaper print paper from Canada. It is not exactly a bribe, but it amounts to the same thing.

The daily papers are not all in favor of passing the bill to admit Canadian farmers' products free of duty, but some of them are, and their willingness to help along the injurious measure is largely due to the fact that the bill includes the admission of Canadian wood pulp free of duty. The papers opposing the treaty are standing by their principles. The expectation of getting cheaper paper may be one of the reasons why some of the supposedly great, dependable farm papers are silent on the bogus reciprocity bill and are willing to silently admit Canadian grain, meats, live stock, etc., to the markets of this country free of duty in competition with our own productions. It is very hard to find any other reason for the silence by which some of our farm papers are afflicted.

The political papers are pretty generally outspoken, either for or against the reciprocity measure, and you can usually understand them, but some of the farm papers are silent in regard to the greatest subject which has affected the interest of the farmer in a hundred years. When it is all over the silent papers will talk loud enough, but in the emergency they don't amount to a "bump on a log." We make no reference to any publication in particular. In this matter the columns of the paper show whether they are for or against or on the fence. We will say, however, that if all the farm papers of this country had stood by the farmer as many good farm papers have done, Congress would have rejected the reciprocity bill long ago. The proposed reciprocity bill with Canada is a mistake. It is uncalled for; it is altogether in the interest of Canada, and it is distinctly and positively injurious to the farming and stock raising interests of the United States of America. No Protectionist can vote for it without turning his coat and becoming a Free Trader. No member of Congress who votes for it can ever look to his farming constituents again for a vote of confidence. There are differences, however. An avowed Free Trader may be against the farmer, but he deceives no one. The Protectionist who votes for protection to-day for the manufacturer and against protection to-morrow when the farmers' interests are concerned, is voting against his own avowed principles, and if farmers can vote him out it ought to be done. The National Farmer and Stock Grower may not have much influence, but if the alleged reciprocity bill becomes a law we will advise farmers of the United States to turn wheat growing over to the Canadians. Wheat growing has been the favorite crop of the farmer. He would rather raise wheat and barely make a living than devote the main acreage to other crops; but if the United States government deliberately enacts laws for the especial purpose of reducing the value of farmers' products, then wheat is the first crop that the United States farmer will have to give up.

The editor of The National Farmer and Stock Grower has been a farm owner for thirty-five years and a farm editor for thirty-one years, and until the present emergency has not found it necessary to write political articles. An advocate of reciprocity that is true to name should not support the bogus article whereby every interest the farmer has is sacrificed, with nothing in return.

The reciprocity bill is still in the United States Senate. The final vote will be close. Farmers should write their Senators. One letter may turn the scale. Farmers should leave the cultivator for an hour and write two letters. A list of the Senate is on page 13.

Might Change His Mind.

Senator Stone, of Missouri, is one of the active partisans of the bogus reciprocity bill that is before the Senate. If thirty thousand farmers would each invest a postage stamp writing to Hon. William J. Stone, United States Senate, Washington, D. C., it would be money well spent. Hon. James A. Reed is the new Senator from Missouri and ought not to be overlooked.

Our Credit Subscriptions.

We are sending out a fair number of sample copies of The National Farmer and Stock Grower and we hope our readers will take a look at the article on page 6. It is not always convenient on the farm to obtain a money order or to register a letter, and rather than lose or delay a subscription we will be glad to have the subscription blank signed up and sent in to us.

This paper is one of the best friends of the farmer. It was the first to give warning of approaching danger of the loss of the customs duties which to a certain extent furnish revenue to the national government and at the same time protect farmers from the admission of foreign grain, wool, meats, etc., free and untaxed. Our timely warning has been of great value to the farming interests.

Points For an Interview.

Mr. Hitchcock, the news editor of the great daily, had only the junior reporter at hand, and news of a shooting case had come in.

A man had married a girl at four o'clock the afternoon before, and at eight the same evening had shot at her five times.

Two Profit Farmers
This 1½ H. P. Waterloo Boy Farm Pump Engine is the simplest, lightest, strongest gasoline engine for its size and rating in the world. It is geared up directly to the pump by a strong double back gear. This cuts out all belting and makes it Simple, Powerful and Economical. You can disconnect it in an instant and belt it up to any other farm machine, from cream separator or washing machine to corn sheller or light dynamo.
Waterloo Boy FARM PUMP Engine
is a general utility engine and will prove the steadiest worker on the farm. It is so simple and convenient that a woman or boy can run it. Starts easy in coldest weather. It's a real "Waterloo Boy" with all the superiority that has made this name famous. For Efficiency and Service the year round, it has everything else on the market badly beaten and It Undersells All Competitors.
5 Year Guarantee
Buttercup Cream Separator
Is a big money-maker because it saves all the golden dollars out of the cream—it skims down to 1-100 of 1% of the butter fat. It's a standard, tried and tested machine with a clean "make good" record. Built low down, with heavy steady frame and big bowl. Light running, sanitary and easy to clean. Will last a life time.
These machines are the product of experience and "knowing how" and are backed up by an 18 year record of square dealing and making good. They are good machines to trust.
Let us tell you the whole story about them. Write today for catalogs.
Waterloo Gasoline Engine Company
228 West 3rd Ave Waterloo Iowa

"What shall I do?" asked the reporter.

"Get an interview from the girl," said Hitchcock.

"But I don't know what to ask her," objected the reporter.

Hitchcock got up from his chair, walked over to the wall, and beat his head against the plaster three times. "I don't think you understand," he told the youth with as much patience as he could muster. "Married at four and shot at five times at eight. Go and get the story."

"Well, what shall I ask her?" queried the reporter.

Hitchcock, looking pained and grieved, said: "Ask her whether she considers the conduct of her husband an insult or merely studied indifference."—London Opinion.

The port of shipment for the largest amount of wheat is Portland, Oregon.

The Sure Thing in Agriculture.

It is worth considerable to a farmer to be located on the right kind of a railroad, on one that enlarges a population by first-class service and by catering to every beneficial enterprise reached by the road. Such a system is the Atchison, Topeka and Santa Fe. This road was built in advance of settlement and has ever been in the front of all movements assisting settlers into rich lands and satisfactory localities. They are now sending out literature describing the irrigation farms of the Arkansas valley of Colorado and Kansas. See page 18.

Our Grape Premium.

We are still able to furnish our readers our grape cuttings. It is the right way to secure true varieties.

We are offering The National Farmer and Stock Grower for one year; the Ladies' World, a splendid magazine, for one year, and eight two-year-old grapevine plants, all for One Dollar. Every order for plants is filled promptly by the best Chautauqua vineyard in New York state. They are kept at proper temperature until shipped out. This is an extraordinary offer — splendid value for the money. Send us One Dollar at once and you will never regret the investment. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and on all manufactured goods, said duties to be applied to the support of the national government.

Every farmer in the United States is taxed by his county and state and he pays indirect taxation for the support of the federal government. We believe that the advantage of the markets of the United States belongs to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the state receives support and the farmer has a very moderate degree of what is called protection. In times of scarcity foreign goods can come in on a fair basis, and in times of abundance the country thrives without them. We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmers' products the manufacturer would shut his doors. Legislation against the farming interest is the height of folly. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out.

Three pieces of proposed legislation now before Congress are foolish and unnecessary. One is the bogus reciprocity bill; the next is the humbug farmers' free list; and the next is the proposed reduction of the duty on wool and woolens. None of these bills ought to pass, and the business of the whole country will learn what stagnation is if these bills do pass.

Mr. Vissering's Great Offer.

J. P. Vissering, of Godfrey, Ill., writes: "I have been an admirer and breeder of Aberdeen-Angus cattle and big-type Poland-China hogs for many years. I am now sixty-six years old and have no sons to take up the breeding of these, the best cattle and hogs on earth. I have lately sold my farm, and in order to disperse of my stock at private treaty I am making astonishingly low prices on cows, bulls and hogs of both sexes and all ages. I have to give possession on July 1st.

"My terms are cash, or, if you so desire, we can arrange for such time as will suit you and me at 6 per cent. interest.

"I have such confidence in the ability of my stock to please that I make this offer to mail order buyers: If upon arrival the stock is not what you are looking for, you may return it and I will pay return freight. But, what is better, come and see the cattle. If you do not find them as represented, it will cost you nothing to come here, and I will pay your way back, too. If you want some of these bargains, come quick. See the two advertisements in the breeders' columns.

Get this Genuine Alectride Tool Grinder on Free Trial

Sharpen your tools at my expense. I want to show you that the ancient grindstone is a back number and that the emery wheel is a menace. I want you to try positively free this genuine Alectride Farm Tool Grinder. Alectride is the only true abrasive. **It will not draw the temper from steel;** it will sharpen the dullest tool in from 3 to 5 minutes, when the grindstone would take half an hour. Alectride **never** wears out. It does not glaze over. I want to send a few of these machines out on **Free Trial** in every part of the United States. I want to put one in every locality. I want you to clip off and send the coupon at the upper right hand corner of this announcement and I will mail at once circulars explaining every detail of the ofier I am making here.

I Don't Want You to Send Me a Cent of Your Money. I Don't Want Any Promise

I merely want to place this Genuine Alectride Grinder on your farm for a few days. Sharpen your dull axe, your dull scythe, your dull corn knives, your dull cold chisels, or hatchet, or any dull tool you have. See how quickly and how easily it is done. See how Alectride (made of the substance of precious stones) sharpens your tools in from one-fourth to one-twenty-fifth of the time required by a grindstone and does not heat nor draw the temper. Do all this—give this machine the most severe tests—then unless you think that you positively cannot get along without this Alectride Tool Grinder, send it back at our expense. We'll ask no questions. We'll take it back without a word, and we'll pay the transportation charges. Now send the coupon. Let us tell you all about this wonderful abrasive and our free trial offer.

Remember—Alectride is really manufactured precious stones. It is even *harder* than the hardest diamond. Alectride will scratch a diamond and cut glass like a knife cuts an apple. Send the coupon today and get full explanation of our **Great 10 Day Free Trial Offer.** Do this now. Do not delay.

The National Beverage.

At every soda fountain in the United States Coca-Cola is sold over the counter. The reason for this is that Coca-Cola is a refreshing, enjoyable, harmless beverage. It does not create a habit, but is pleasant and beneficial and one does not tire of it. Coca-Cola has just been through an ordeal in the courts and has stood every test, and our readers can enjoy it in perfect safety.

Poultry Products.

[W. E. Vaplon, Poultryman, Colorado Agricultural College, Fort Collins.]

So long as we depend upon the grocer to handle our eggs, and upon the butcher to handle our fowls; so long as we take eggs to market that are large and small, mixed colors, white, brown, pink and speckled; so long as we will bring in fresh eggs with blood clots, and stale eggs taken from a stolen nest, clean and dirty; just so long will we have to take the offered price in trade. So long as we remain a thousand miles from the consumer, whether in distance or in methods of marketing, so long will the several middlemen have the profits the producer should have.

So long as we "don't care," and "what's the use," we are not going to create a greater demand for our products; so long as the consumer is satisfied with "any old egg," "an egg's an egg," so long will there be mutual indifference and distrust. It is a matter needing education, because of ignorance on both sides. We can create a demand only by educating the consumer's taste; feed him strictly fresh, sweet, tasty eggs for a while, and those who bring in the old products in the old way will find themselves out of a job.

So soon as the consumer can eat his boiled eggs with his eyes closed, so soon will he fail to see the extra five cents a dozen in the bill. So soon as the producer uses the Golden Rule trade mark on his egg package, so soon will the consumer draw his checks on the Golden Rule bank.

Potatoes, cantaloupes and apples from certain sections of our state have a reputation for quality; the only reputation our eggs have are for another kind of quality. So soon as we consider an egg of as much value as a potato, so soon we will get what it is worth on the market; as it is, some get more, and some get less.

Most of the eggs we have seen sold at 12½ cents this season were not worth more than ordinary fertilizer, so much a load, or ton. It is time we got ashamed of ourselves and inspired a little confidence in the consumer by better and cleaner methods.

FARM SCENE—View on farm of Hon. Isaac Stephenson, United States Senator, at Somers, Wisconsin. This is one of the best dairy farms in that state, having two herds of cattle, both pure-bred, one Guernseys and the other Holsteins. In the conduct of dairy farms, including hauling cream to the factory, the automobile is becoming an important and economic factor, and at Senator Stephenson's farm it is considered an actual necessity. The car in the foreground is the Rambler, the car that is advertised on page 2.

End Roof Expense Forever!

THE EDWARDS MANUFACTURING CO.
507-557 Lock St., Cincinnati, Ohio (45)

Ozark Butter Standard.

The combined Ozark creameries appointed W. E. Riddell, of Kansas City, as sales agent for their output which is to be labeled "Ozark Butter." About 250,000 pounds of butter will be distributed from Springfield, Mo., each month. There are about thirty-five creameries in the combination, and they have determined to place a high quality of butter on the market.

In order to come up to the standard, cream must not be over three days old when it reaches Springfield, the central distributing point; must be found to contain at least 25 per cent. of butter-fat when tested with the Babcock tester, and must be up to standard in sweetness and general flavor. This is the plan submitted by the Cream-grading Committee and adopted by a vote of the association. Mr. H. W. Jensen, of Mountain Grove, Mo., is President of the association.

Iowa Silo Wisdom.

The Iowa College of Agriculture Bulletin on Silos contains the following information:

1. Location should be outside of all buildings.
2. The fundamental principle in the preservation of green foliage when placed in a silo is the exclusion of air.
3. To prevent the air from reaching the silage, all silos must have air-tight walls.
4. A vertical smooth wall is the only satisfactory wall to use.
5. Best results are got by distributing the silage uniformly throughout the silo, and packing it carefully near the walls and doors.
6. Prevent freezing of silage as far as possible.
7. A double wall concrete silo is most nearly frost proof.
8. It is dangerous to feed frozen silage.
9. The depth of the silo ought not to be less than thirty feet.
10. Two inches should be fed from the surface each day.
11. The pressure of silage is about eleven pounds per square foot for each foot of depth.
12. Stave silos should be anchored to prevent blowing over.
13. The building of a square silo can seldom if ever be profitable or desirable.

Alfalfa For the Dairy.

"Milk producers who know it best concede that alfalfa is an invaluable feed in the dairy, closely akin to wheat bran in results, and usually much less expensive. In the average small town or city there is about one cow for every ten or fifteen people. Therefore, in a town of one thousand population there will probably be seventy-five to one hundred cows. If alfalfa will increase the quantity of their milk and butter-fat, giving a product at a lower cost than the concentrated foods, it should be more used. But as yet it is not generally used, because it is not understood and appreciated."—From Coburn's "The Book of Alfalfa."

World's Champion Ayrshire Cow.

Netherhall Brownie, 9th, 23,985. Official record for 365 consecutive days, 18,110 pounds of milk and 820.91 pounds of butter-fat, equal to 958 pounds of butter.

It gives me great pleasure to announce the completion of the year's test for admission to the Advanced Register of the above cow, owned by J. W. Clise, Seattle, Washington.

She was tested under the supervision of the Washington State Agricultural College, and has given the largest official record both in milk and butter-fat of any Ayrshire cow in the world, so far as heard from.

This record places her above the cow Rena Ross, who has held the world's championship for the Ayrshire with the official record of 15,072 pounds of milk and 751 pounds of butter.

As an indication of progress in Ayrshire breeding, and as exemplifying the value of advanced registry testing, I would say that the first Ayrshire cow to stand as the world's champion Ayrshire cow was Rena Myrtle, with a record of 12,172 pounds of milk and 546 pounds of butter, tested by the Vermont Experiment Station.

This record she held for a number of years, until the association inaugurated the Advanced Registry System of testing, which brought to the front the Ayrshire cow Keepsake, with a record of 12,365 pounds of milk and 548 pounds of butter, making her the world's champion Ayrshire cow, which she held until Rena Ross came along with a record of 15,072 pounds of milk and 751 pounds of butter, and now Netherhall Brownie, 9th, goes ahead with a record of 18,110 pounds of milk and 958 pounds of butter.

All this shows what we have always claimed, that there are Ayrshire cows kept in obscurity that would astonish the world if the owners would only give them an official test, and we believe the above is only the beginning of a far more abundant harvest, and that the 20,000 pounds milk and 1,000 pounds butter yield is not far distant. C. M. WINSLOW, Secretary.

Brandon, Vt., March, 1911.

The Butter-fat Standard.

The London (England) Dairyman is inviting attention to the fact that an inflexible butter-fat standard in milk is an injustice. It appears that the English butter-fat requirement in milk is three per cent. It is stated by the London Dairyman that "thousands of unjust convictions have been recorded against dairymen and dairy farmers owing to the variability of fat in pure milk for which the cow and her Maker alone are responsible. And yet all over the country the sapient dispensers of justice contend that all milk under the human legalized formula of three per cent. of fat is not of the nature, substance, quality, etc., demanded. And we ask, isn't it? And contend that the said justices are unjust judges, and maintain that despite all human standards milk as the cow gives it is pure milk."

The editor of the London Dairyman should not get excited. He ought to live in Missouri. Here we have officers of the Agricultural Department going around convicting dairymen of selling milk as it came from the cow because it contains less than 3¼ per cent. butter-fat, and another bunch is going round exploiting and showing the great Agricultural College cow that, being tested for a whole year, her milk gave an average butter-fat content of 2.75, which is fully one-half per cent. below the state standard. The butter-fat standards, like a good many other standards, are set up by people who could not make an honest living by dairying, and yet by reason of being officials, drawing salaries, they recommend standards that cannot always be lived up to. We have been wondering if the Missouri Agricultural College authorities would ever honestly confess that the butter-fat performance of Missouri Chief Josephine is so far below the legal requirements; that either the cow ought to be killed or the standard be reduced. Missouri Chief Josephine is a large performer, but if she would change owners once a day and give milk every day in the year, she could have 300 dairymen convicted for selling her milk. Let us hear from the State Dairy Commissioner. First in defense of the cow and then in defense of the law.

Dairy and Creamery.

At a Pennsylvania butter contest held recently the moisture content ranged from 10 to 15 per cent., the average being 12.3 per cent. The salt varied from 0.97 per cent. to 4.8 per cent., the average being 2.08 per cent. The highest score was 93½.

The Interstate Commerce Commission has suspended until November 1st advanced rates on cream and condensed milk, which the Erie, B. & O. and other Ohio roads started to establish in what is known as the Ohio district.

"If I had kept twenty-five cows for thirteen years that averaged as good as my best cows, I would have $20,000 profit for thirteen years. If I had kept twenty-five cows averaging with my poorest, I would have $19.50 for thirteen-years' work."—A. J. Pierpont, of Connecticut, in a letter to the Rural New Yorker.

A large shipment of condensed milk was seized recently by United States Marshals at the instance of the Department of Agriculture. It was labeled "Evaporated Milk," but as it was not evaporated enough, it was classed as adulterated under the law.

At a Denmark creamery, which had been under one management for twenty-five years, a report reduced to an American basis indicated that during the past year for milk the farmers received $1.15 per 100 pounds on their farms; the skim milk returned to farmers was charged up at 27 cents per 100 pounds.

The Fairmount Creamery has issued a report for general circulation indicating that the reduced price of butter has caused many farmers to discontinue milking cows.

A middle of May report of the New York milk market said: "Receipts at New York of liquid milk show no further increase—288,400 cans for the week—but there is more cream coming this way, the supply slightly exceeding 12,300 cans. The Exchange price for milk is 2¼ cents a quart net to shippers in the 26-cent freight zone, which makes the cost delivered in New York equal to $1.41 a can of forty quarts.

Advanced Registry Holstein cows, 244 head of them, averaged 3.51 per cent. butter-fat, equal to 16.6 pounds of commercial butter a week. The average milk production was 27.6 quarts per cow per day.

It Wins in Clover

This picture from an actual photo shows **Louden Balance Grapple Fork** lifting a third of a ton of dry clover hay.

How's that for a winner?

There isn't another fork in the world in its class. It's the only one that can handle clover, alfalfa and threshed straw as successfully as timothy. No dribbling or scattering, with long stuff or short, large load or small.

Louden's BALANCE GRAPPLE Fork

has a patented arch support that gives perfect balance. It takes hold or releases its load at the slightest touch. Simple in design, made of steel with heavy malleable connections. **Will lift half a ton without bend or break.**

Get the **Louden, the best hay fork in the world.** See it at your dealer's. If he hasn't it don't run chances with any other—write us direct.

Get our complete Free Catalog of **Louden Barn Tools, Feed and Litter Carriers, Flexible Bird Proof Door Hangers, Hay Tools,** etc. Also booklet "Some Interesting Facts on a Homely Subject. Write now.

Shoo-Fly THE ANIMALS FRIEND

Keeps flies and all insects and pests off animals—in barn or pasture—longer than any imitation. Used and endorsed since 1885 by leading dairymen and farmers.

$1 worth saves $20.00 in milk and flesh on each cow in a single season. Cures sores, stops itching and prevents infection. Nothing better for galls. Kills lice and mites in poultry houses.

SEND $1, if your dealer can't supply you, for enough Shoo-Fly to protect 200 cows, and our 8-tube gravity sprayer without extra charge. *Money back if not satisfactory.* Write for Booklet, free. Special terms to agents.

Shoo-Fly Mfg. Co., Dept. 28, 1301 N. 10th St., Philada.

Editor knows from experience that Shoo-Fly is O. K.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

National Dairy Show Notes.

The farmers and dairymen of the United States and Canada and all friends of the National Dairy Show Association will be interested in knowing of the plans of promotion and development that contribute to the holding of the 1911 Show.

An Executive Committee consisting of Messrs. R. B. Swift, Chicago, Chairman; W. W. Marsh, Waterloo, Iowa; H. E. Van Norman, State College, Pa.; J. A. Walker, Chicago; A. J. Glover, Fort Atkinson, Wis.; F. J. Macnish, Chicago; and Wm. Hill, Bloomingdale, Ind., has been selected by the Board of Directors.

The Executive Committee is composed of men who have been eminently successful in their different fields of dairy endeavor, and the National Dairy Show will enjoy the same ability in the transaction of its business affairs. They have selected Hon. A. O. Auten, Jerseyville, Ill., as General Manager and have located the coming Exposition to be held at Chicago.

The National Dairy Show Association has expended more than $200,000 in promoting the dairy industry, and the dairymen of the country may rest assured that the management strives to meet the obligations that rest upon it as the "clearing house of the dairy industry," as it has properly been termed.

The National Dairy Show renders a service not attempted by any other agency. It is not antagonistic to, but on the contrary seeks the support and co-operation of and aims to work in harmony with and supplement and make more effective the efforts of every other organization and agency for the upbuilding of the dairy industry, an industry representing an annual output of nearly a billion dollars.

THE NATIONAL DAIRY SHOW ASSOCIATION,
A. O. Auten, General Manager.

A French View of Nitrate.

The French journal "Fertilizers" predicts a large consumption of nitrate of soda for 1911. It says:

"We can not conceive of agriculture's taking a backward step and refusing to fertilize wheat and oats just at a time when the prices of cereals are extraordinarily high.

"It is now apparent that agriculture can not get along without nitrate and that it does not dream of neglecting this indispensable fertilizer."

LOW BUTTER PRICES Make the Best Separator of Still Greater Importance

There could be no greater mistake on the part of the intelligent dairy farmer than to put off the purchase of a cream separator this year because cream and butter prices are unfortunately lower than they have been for several years past.

Nor could there be any greater mistake than to be tempted to buy an inferior separator at a trifle less first cost on this account.

There may be money in dairying when prices are high with a second or third grade separator or even without any at all.

But when prices are low the use of a DE LAVAL separator, with its greater saving and more economical operation than any other, usually marks the dividing line between profit and loss in dairy farming.

There is still money in dairying with a DE LAVAL separator, but the chances are that there is very little without one.

Moreover, you don't have to pay cash down for a DE LAVAL separator, if it may be inconvenient to do so. You can buy one on such liberal terms that it will actually pay for itself from its savings, even at present dairy prices.

With butter prices as they are there never was greater need to buy a DE LAVAL separator, nor stronger reason not to buy an inferior separator or to get along without any.

You need not be in doubt about it. Just arrange with the nearest DE LAVAL agent to see and try a DE LAVAL machine for yourself. Do this if you already have another kind, and try any other kind at the same time if the maker or agent will let you do so.

If there is no De Laval agent near you write us direct for any information you desire, and with the height of the dairy season at hand by all means don't delay prompt action.

THE FARM CREAM SEPARATOR.

Used Twice a Day the Year Round and the Most Valuable Implement on the Farm.

[O. J. Mottard, in Northwestern Agriculturist.]

From the result of tests which I conducted a short time ago, it seems impossible to escape the conclusion that the average loss, where the separator is not used, and where the milk is set in pans, cans and crocks, is three-fourths of a pound of butter, or something more, to each hundred pounds of milk.

This means with milk of average richness (3.5 per cent. butter-fat), a loss of about 20 per cent. of the total product of butter. A herd of cows ought to average, per cow, 5,000 pounds of milk per year, and would do so if made up of good animals and well managed; but even if they only averaged 4,000 pounds, the loss on one cow would be thirty pounds of butter, and on ten cows 300 pounds, which, at twenty-five cents per pound, would be $75 a year.

It will be seen by this that the loss to the farmers who take the cream out of milk by the gravity process is enormous in the aggregate. Is it really possible that a business man can suffer such a loss and yet succeed? What would be the opinion of the public if they saw a man that would go along from one year to another with a hole in his pocket, through which twenty cents would drop out and be lost every time he put in a dollar? Some men even console themselves by saying: "It's not all lost; the calves and pigs get the butter." This is very poor consolation, for butter is dear feed, even when the price is the lowest. A little oil meal will answer the same purpose as the butter-fat. Besides, the milk that is run through the separator and fed immediately after milking, while it is warm, new and sweet, even though all the butter-fat is taken out, is better feed for calves than skim milk that is old and partially sour. The hundreds of farmers who are using cream separators would tell you the same thing.

The casual observer should look well into this method of separating milk. However, those days are gone by when the intelligent dairymen will purchase any and every kind of a machine, be it ever so well advertised. Everybody knows that there are vast differences in separators. One make of a machine may prove a great investment on the farm, while another may be a great loss. Nevertheless, any one make would be a great improvement over the old method of skimming, yet the man with the right kind of a machine will make a considerable extra profit over his neighbor who invested in some other make. The separator is the one machine on the farm that pays the quickest for itself, because it is used twice a day the year around, rain or shine.

I tested a separator for a farmer not long ago. The machine was old and no doubt should have been taken out of service before now. The skim milk from that machine tested seven-tenths of one per cent. of butter-fat, or seven pounds of butter-fat to every thousand pounds of milk. This farmer was getting 4,000 pounds of milk weekly, making a loss of twenty-eight pounds of butter-fat, which at thirty-two cents per pound would make a sum of $8.90 lost per week.

It will be seen that at this rate a new separator could have been bought and paid for within three months.

Origin of Artesian Water.

Whence comes artesian water? It is believed by many persons that artesian water is stored up in the depths of the earth in great reservoirs or exists as mysterious underground rivers which eventually find their way to the surface. It is true that the water is stored up in underground reservoirs, but not as popularly supposed. With the exception of a few caverns of comparatively small extent such reservoirs bear no relation to open basins of the surface type, but are as a rule rock strata or masses in which the only openings are spaces between the grains or along lines of solution, planes of jointing, cleavage, or bedding, or other fissures.

The probable source of underground waters has been widely discussed, and while every one would doubtless agree that by far the greater part is derived from rainfall, there is considerable variation of opinion as to the relative importance of the other sources, such as seepage, or absorption of water from the ocean, or the release of otherwise unavailable waters in the earth's crust which have been set free by physical or chemical exclusion.

Bulletin 319 of the United States Geological Survey, entitled "Summary of the Controlling Factors of the Artesian Flows," by Myron L. Fuller, discusses the subject of the theory and behavior of artesian wells. A copy may be obtained on application to the Director of the Survey at Washington.

Suffrage as an Anodyne.

Another proof that woman is really braver than man is that she shows absolutely no sign of fear or hesitation when it comes time to manipulate the curtain stretchers. —Columbus (Ohio) State Journal.

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, cannot spill or tip over; will not soil or injure anything. Guaranteed effective. Of all dealers, or sent prepaid for 20 cents.

REMSENBURG, N. Y.

Good Record at Kansas City.

The firm of Clay, Robinson & Co., live stock commission agents at Kansas City, report as follows:

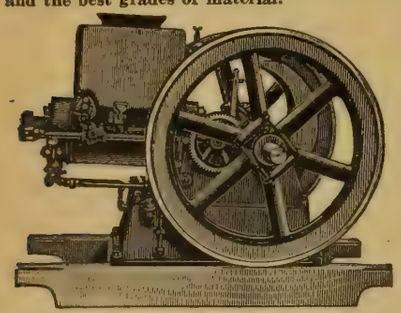
"On May 22d our Kansas City house topped the cattle market for D. P. Wagner, of Detroit, Kas., with twenty-five steers, 1,072 pounds, at $6.10 per 100 pounds, and seventeen steers, 754 pounds, at $6.00 per 100 pounds.

"The same day we topped the hog market for F. W. Estes, of Fairview, Mo., with eighty-five hogs, 190 pounds, at $5.95 per 100 pounds.

"Our sheep department there also shared in market-topping honors that day by selling for Kline & Marlman, of Las Animas, Colo., 964 wooled lambs, 75 pounds, at $7.00 per 100 pounds, and for J. L. Hurt, of Center, Colo., 768 clipped lambs, 76 pounds, at $6.75 per 100 pounds, both figures being 25 cents per 100 pounds higher than any other firm obtained that day."

Stover Gasoline Engine.

Claims to superiority of STOVER ENGINES are based upon symmetrical appearance, simplicity of operation, economy of fuel, the correct mechanical workmanship and the best grades of material.



The illustration shows our Four-horse-power Hopper Cooled Engines, popular size. When installed as stationary, are excellent power for operating light machinery. For farm purposes, can be mounted on skids or light truck. The gasoline is contained in the base and engine is shipped ready for operation with all gasoline pipe connections made complete. The series is named THE STOVER JUNIOR. The sizes are 1, 2½ and 4 horse power. This is absolutely the best make of Gasoline Engine on the market today. See us or write us for Stover Junior Catalogue.

WEBER IMPLEMENT AND AUTOMOBILE COMPANY,

1900 Locust Street, St. Louis, Mo.

Early peaches arriving at the St. Louis market sold at $1.50 per four-basket crate for choice stock.

Best Watch in the World.

One hundred and eighty of the leading railroads have adopted the Howard Watch as the standard of excellence. It is because the Howard Watch has no actual competitor. There is an interesting story about this watch which our patrons will take pleasure in reading. Just write a postal card to Dept. 122, Howard Watch Works, Boston, Mass., and ask for the story of The First American Watch. See page 7 and read about the best watch in the world.

Phil Sheridan's Funniest.

Gen. Phil Sheridan was at one time asked at what little incident did he laugh the most.

"Well," said he, "I do not know; but I always laugh when I think of the Irishman and the army mule.

"I was riding down the line one day, when I saw an Irishman mounted on a mule which was kicking its legs rather freely. The mule finally got its hoof caught in the stirrup, when, in the excitement, the Irishman, glaring at the animal, remarked:

"'Well, begorra, if you're goin' to git on, I'll git off.'"—Human Life.

St. Louis Fair Memorial.

All that remains of the great St. Louis Fair is a granite boulder. On Decoration Day, 1911, the memorial was erected. It marks the spot that was the center of the main entrance to the amphitheater. The stone is a weather-worn mass of red granite, imbedded in a concrete foundation, and standing about five feet above ground. The purpose of the boulder is stated on a nicely-designed bronze tablet let into the western face of the rock.

During the ceremonies, Arthur Barrett, son of the President of the St. Louis Agricultural and Mechanical Association, who held office for nine years immediately after the Civil War, delivered an address, in which he related the benefits conferred by the Fair on the city, the state and the surrounding districts. He told of the importance attached to the awards at this Fair throughout a wide district and of the complete possession the Fair took of the city during the week it was in progress.

The St. Louis Fair opened in 1856 was the first Agricultural Fair west of the Mississippi river. It was discontinued after the Fair of 1903. The only living official of the original Fair is Hon. Norman J. Colman, the first United States Secretary of Agriculture, and, as editor of Colman's Rural World, the dean of agricultural journalism.

In this connection we desire to say that a movement is on foot to organize a new Fair and Exposition Company to revive the great St. Louis Fair on a tract of land just outside the city limits. The details are not quite perfected, but the capital stock is subscribed and an announcement will be made shortly, giving full particulars.

St. Louis Root Quotations.

The following St. Louis root quotations represent farmers' consignments sold at wholesale on the market towards the end of May. Quote by the pound, all spring-dug, dry and in good condition: Golden Seal at $2.20; Lady Slipper, 15c.; Seneca, 30c.; Pink, 16c.; Black, 5c.; May Apple, 3½c.; Snake, 23c.; Kansas Black Snake (Echinacea), 12c.; do. Oklahoma, 8c., and Missouri not wanted; Angelica, 5c.; Wahoo—Bark of root, 14 to 16c.; bark of tree, 4c.; Blood, 4c.; Blueflag, 5c.; Sassafras, bark of root, 5c.; Wild Ginger, 6c.; Spikenard, 5c.; Skullcap, 1c. Ginseng—Wild, $5.25 to $5.50; and cultivated, $5.00 to $5.25.

Fine Draft Hores Arriving.

Trumans' Pioneer Stud Farm, of Bushnell, Ill., continue to receive importations of Shires and Percherons, all purchased by Mr. J. H. Truman, head of the firm. The Shires just arriving include the noted aged stallion Kingsland Burgeon, considered by prominent horse judges one of the grandest specimens of the breed that has ever left the shores of England. This horse was purchased at a very long price, expressly for show purposes the coming fall, and should he go on all right he will certainly prove a great sensation. There are also five two-year-old Shire stallions from the noted Wrydelands stud, which has produced more strictly high-class Shire mares that have been brought to this country than any other stud in England. Some of them are related very closely to the International champions, Wrydelands Starlight and Wrydelands Sunshine, the former owned by the Iowa State Agricultural College. The shipment also included the noted Hackney mare, Nene Lady Gay, one of the most sensational Hackney mares that has been imported for a long time. She has been shown a great deal in England and been a very strong winner.

Close Vote in the Senate.

The latest report from Washington concerning the bogus reciprocity treaty is, that the Senate Finance Committee is eight to seven against the bill. Senator Cullom, of Illinois, is reported in favor of the bill. About thirty thousand Illinois farmers ought to sit right down and write to Senator Cullom. His address is on page 13.

Write to Your Senators.

Farmers are reminded that during the month of June the bogus reciprocity bill, which is to admit Canadian farm productions into this country free of duty, will be acted upon in the Senate. Probably it will be passed or defeated by one vote. One letter from a farmer to the Senator representing his state may defeat the bill. It ought to be defeated, and farmers ought to see that it is defeated. It is a two-faced measure, sacrificing the interests of the farmers of the United States for no good purpose.

International Harvester Employes.

In the abstract of annual report by the International Harvester Company, dated May 11, 1911, we find the average number of employes was 35,743, the amounts expended during the year for salaries, wages, profit-sharing, benefit and pension funds, being $29,279,057. The Employes' Benefit Association paid out for death, accident and sick benefits, $218,703. The permanent fund from the income of which pensions are paid to old employes now amounts to $761,291.

GOOD BOOKS AND PAPERS.

REMEDIES AND PREVENTIVES AGAINST MOSQUITOES. Write to United States Department of Agriculture, Washington, D. C., for copy of Farmers' Bulletin No. 444. It is divided into chapters—protection from bites; smudges and fumigants; apparatus for catching adult mosquitoes; remedy for mosquito bites; abolition of breeding places, etc. It is a very useful and timely bulletin.

FARMERS' BULLETIN, 441, issued by the United States Department of Agriculture, is devoted to Lespedeza, or Japan clover. It is by A. D. McNair and W. B. Mercer, of the Bureau of Plant Industry. The area which is mentioned as naturally suitable to the growth of Lespedeza is New Jersey and westward to Kansas, taking in Southern Ohio, Illinois and Missouri, and south to the Gulf of Mexico. Lespedeza is an annual, but it is rarely necessary to resow it on pasture lands.

FARM AND RANCH LANDS.

ARKANSAS.—Fine Stock Farm. 887 acres, within 2½ miles of Warren, the county seat of Bradley county. Finest proposition in the state. Creek cuts land in middle. Five hundred acres in grass; level as a floor. Under fence. Price, $25.00 per acre. Terms to suit. **Jno. A. Culbreath & Co.,** Warren, Ark.

ARKANSAS.—The new corn country and best alfalfa lands in Little River county; 1,000 acres Red River land; finest stock and grain farm in this section at a bargain. Hogs and cattle raised here cheaper than elsewhere. Address, **W. R. Cavett,** Shreveport, La.

COLORADO.—Arkansas Valley Irrigated Lands. The sure thing in agriculture. Forty-acre farms worth a fortune. If you wish to know more about this valley, address **C. L. Seagraves,** 1953 Railway Exchange, Chicago, Ill.

THE FINEST FARM

In Southern Illinois, located east of Marion, county seat of Williamson county. 540 acres, all in cultivation and grass, excepting 40 acres virgin hardwood timber; fenced and cross-fenced; six-room dwelling, two large barns, outbuildings; finely watered. Splendid stock and grain farm. Coal of finest quality under entire farm.

Owner lives in St. Louis; cannot give farm any personal attention. He is anxious to sell. Terms, $5,000 cash; balance mortgage on land.

ALFRED RICKETTS REALTY CO.,
608 Chestnut Street, St. Louis, Mo.

KANSAS.—The section of the Arkansas valley in the state of Kansas is rich beyond comparison and irrigation makes it sure. Forty-acre farms worth a fortune. Address for maps and booklet **C. L. Seagraves,** 1953 Railway Exchange, Chicago, Ill.

KANSAS.—680 acres. Do you want to own a productive farm for a few years and then sell it for double its cost? I offer you the opportunity. There are 550 acres of creek bottom land, no overflow; 500 acres the best alfalfa land. The best corn, oats, wheat, bluegrass, timothy and red clover land. Abundance of all growing on the farm now. A clear, litle running stream runs through the farm. Rock and gravel bottom; no mud or mire. 130 acres rough pasture land. Only about fifteen miles from Ft. Scott, Kas.; two miles to railroad station. Good six-room brick house; good, new barns for twenty horses, and other outbuildings. Good well at house, good well at barn lot, and spring branch in lot. Price only $60 an acre; easy terms. This farm in Lafayette or Saline county, Missouri, would sell for $200 an acre. It is worth just as much in Kansas. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

MISSOURI.—3,280 acres. I am offering the finest stock proposition on the Rock Island Railroad between St. Louis and Kansas City. Only a night's ride to Chicago. 50 per cent. tillable land, the other fine bluegrass land. 11½ miles new woven wire fence, white oak posts; new $5,000 residence; new $2,500 barn. Rock Island station and stock yards in center of the ranch. Will be worth $100 an acre in a few years. The finest water. Price, $22.50 per acre. Easy terms. **J. H. Lipscomb,** 306 Fidelity Trust Bldg., Kansas City, Mo.

I BRING BUYERS AND SELLERS TOGETHER. If you want to buy, sell or exchange a farm or business, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago, Ill.**

FARMS WANTED! We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

WESTERN CANADA

Prof. Shaw, Well-Known Agriculturist, Says:

"I would sooner raise cattle in Western Canada than in the corn belt of the United States. Feed is cheaper and climate better for the purpose. Your market will improve faster than your farmers will produce the supplies. Wheat can be grown up to the 60th parallel [300 miles north of the International boundary]. Your vacant land will be taken at a rate beyond present conception. We have enough people in the United States alone who want homes to take up this land." Nearly

70,000 Americans

will enter and make their homes in Western Canada this year.

1909 prod ced another large crop of wheat, oats and barley, in addition to which the cattle exports was an immense item.

Cattle raising, dairying, mixed farming and grain growing in the provinces of Manitoba, Saskatchewan and Alberta.

Adaptable soil, healthful climate, splendid schools and churches, and good railways. For settlers' rates, descriptive literature "Last Best West," how to reach the country and other particulars, write to Supt's of I. migration, Ottawa, Can., or to the Canadian Government Agent.

J. S. Crawford, 125 W. 9th St., Kansas City, Mo.; C. J. Broughton, 412 Merchants Loa & Trust Bldg., Chicago, Ill.

(Use address nearest you.) (6)

THE UNITED STATES SENATE.

A Full and Complete List of All the Members, With Address in Washington, D. C.

The bogus reciprocity bill is still before the United States Senate, and the only way to prevent the bill from passing is for the farmers of the United States to bring every possible influence to bear against it.

The bill has already passed the House and is under consideration by the Senate. So long as the Senate has not passed it there is hope of defeating it. Every farmer has a voice in this matter, and if he fails to use it and the bill passes, he will have no one to blame but himself. There are two Senators from each state; therefore each farmer has two letters to write. Just write freely and frankly that you are opposed to the bill because it will serve no good purpose and is distinctly injurious to the farmer. If you have studied the subject and have arrived at any other conclusion, write and say so. This is the first time that the entire agricultural interest has been brought into politics, and if farmers do not assert themselves they will be considered a lot of dummies, and many laws will be passed against their interest.

THE SENATE.

Hon. James S. Sherman, of New York, Vice-President. 1401 16h street, Washington, D. C.
Hon. Augustus O. Bacon, of Georgia. 1799 Oregon avenue.
Hon. Joseph W. Bailey, of Texas. 2620 Connecticut avenue.

Farmers and Hog Diseases.

In commenting on the widespread prevalence of hob cholera and of numerous diseases popularly classed under that name, a writer who has made the subject one of close investigation says that the prevention of the disease is of immense economic importance, and that many of the outbreaks can be prevented by simple remedies. One of these remedies, which has done wonders, is known as "Merry War Lye." That it is possible to prevent an outbreak of hog cholera, or to check the spread of the disease where an outbreak has occurred, is more than possible. That there is an absolutely sure way of accomplishing both of these things is the opinion freely expressed by many farmers who have used Merry War Lye both as a preventive and cure. For stomach and lung worms it is a specific. The E. Myers Lye Company, of St. Louis, Mo., who manufacture Merry War Lye, are in daily receipt of many letters like the following, which attest to its merits as a hog remedy and conditioner:

"I have been feeding Merry War Lye some two months, and it expelled worms from my hogs after the first few feeds. My hogs are apparently well and look fine. Their hair has a good glossy color; they have good appetites. One of my neighbors, an extensive hog raiser, has recently used Merry War Lye upon my recommendation, with good results."—H. C. Acker, Chickasha, Okla.

"I cooked potatoes, turnips, or any kind of refuse, such as cabbage and other roots, seasoned it, then turned it into barrels; put one can of Merry War Lye in two barrels of the feed, which I thickened with shipstuff and fed twice a day. It surely prevented our hogs from getting cholera, while our neighbors lost all of theirs."—Mrs. B. Aholt.

"Merry War Lye has done more for my hogs than all the other medicine I can get."—J. A. Smelser, Lorine, Ark.

"I put corn in soak and use a tablespoonful of Merry War Lye for every ten hogs twice a day. After soaking the corn for a day or so I give this water to the hogs to drink. Many hogs died here last winter. My hogs were never sick."—R. Booton, Richmond, Tex.

"I don't believe Merry War Lye can be beat for hog cholera."—Albert Landreth, Traskwood, Ark.

Merry War Lye is manufactured after an exclusive process and is prepared especially as a hog remedy. It is the only powdered lye which can safely be administered to hogs. Its daily use immunes hogs against hog cholera and other diseases. It tones up the system, assists in the perfect assimilation of the food and prevents souring. It saves feed because every pound of feed goes into flesh and fat and none of it is wasted. It is most effective when mixed in the proportion of one tablesponful with swill for ten hogs, or one-half can added to every barrel of drinking water or feed.

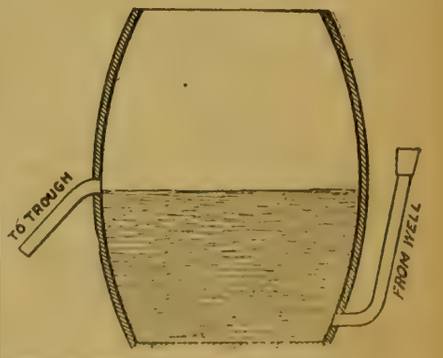
Merry War is for sale at nearly all dealers, but if it cannot be obtained at local stores, every farmer should write to the E. Myers Lye Company, Dept. 22, St. Louis, Mo., for full particulars and their free book on hog raising, which they have recently published.

COUGHS AMONG HORSES.

There may be something more serious the matter than just the cough or cold. The cough may be the result of inflamed condition of the membraneous lining of the head or throat, or the inflammation may have spread to the lungs or other organs, or if not, is liable to. To cure this cough you must use a reliable remedy like Frazier's Distemper Cure. This remedy is guaranteed to cure and prevent distemper, influenza, epizootic, pink-eye, coughs and colds, or your money refunded. One dollar bottle holds three times the quantity of the 50-cent size. If your druggist will not supply you, we will prepay all express charges. Send for free thirty-two-page Horse Booklet. Binkley Medical Co., Dept. H, Nappanee, Ind.

Keeping the Cream Cool.

Another way of cooling cream is the subject of an ingenious article which George H. Miller contributed to Hoard's Dairyman last October. Mr. Miller's very simple but efficient plan consists in placing the can of cream in a barrel and keeping the temperature low by the use of cool water which surrounds it. He bored a hole into the barrel two inches from the bottom, inserted a galvanized pipe having an elbow just outside of the barrel and ran the pipe up a little higher than the tops of the cream cans would be in the barrel. On the top of this pipe he screwed a wooden jelly pail. The cool water from the well is pumped into this pail and enters through the pipe at the bottom of the barrel. The warmest water always rises to the top, and so in order to keep the temperature of the water in the barrel as low as possible, he inserted a pipe for the outlet a little lower than the tops of the cans. The water as it leaves the barrel runs into the water trough for the cattle and consequently no water is wasted. During the hot summer days when the cream



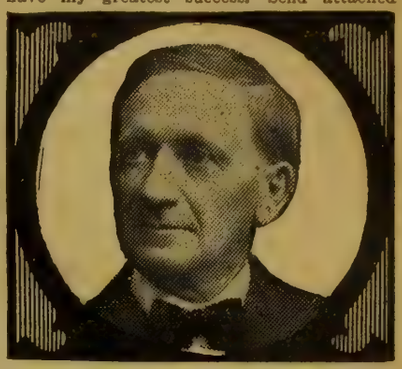
requires a frequent change of the water in order to keep it cool, the farm animals are needing large quantities of water and consequently the circulation of water is more rapid.

Don't Wear A Truss

After Thirty Years Experience I Have Produced An Appliance for Men, Women or Children That Cures Rupture.

I Send It On Trial.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached



The above is C. E. Brooks of Marshall, Mich. who has been curing Rupture for over 30 years. If Ruptured write him today.

coupon today and I will send you free my illustrated book on Rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you can also read. Fill out free coupon below and mail today. It's well worth your time whether you try my Appliance or not.

FREE INFORMATION COUPON

C. E. Brooks, 4711 Brooks Bldg., Marshall, Mich.

Please send me by mail in plain wrapper your illustrated book and full information about your Appliance for the cure of rupture.

First Car Florida Melons.

The Tampa Tribune says that the first car of Florida watermelons, shipped from Candler on May 8th, broke two records, that for early shipment and for price received, selling in New York City for $400. The vines were planted in January, and were covered during the cold weather.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is 50 cents.

For 60 cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Cutting Back Young Trees.

[S. Van Smith, Colorado Agricultural College, Fort Collins.]

The subject of cutting back young trees when planting is an old one, and the idea one in favor, of which much has been said and written.

Experience as well as reason shows that it is well, in setting trees, to cut off a part of the top to correspond with the root, which is unavoidably cut off and injured to some extent in taking up the tree. Surely, no one after a moment's reflection can fail to see that the root, which has to supply food and water to the entire top, will be more heavily taxed than the root which supplies only a part of the original top or head of the tree. Yet there are thousands of trees set out every year without having the tops pruned back even to the slightest extent. Examples of these are seen every day, especially among those who are new at the fruit-growing business and are lacking in both experience and wisdom.

But pruning is unnatural, they say. Very true; so is transplanting. Man's object in fruit growing is the production and improvement of the edible portion of the fruit. Nature's object is the production of seed for the continuation of the species. As their objects differ, so, necessarily, do their methods differ.

Some who think it is wrong, or unnecessary, to cut back trees when planting, can show you trees that are apparently doing well and that were not cut back when planted. They can also, at the same time, point convincingly to a tree which has been cut back when set and later died. Although their chances are less, trees may grow without being cut back. The point is that they will do better if cut back. On the other hand, trees do die which were judiciously pruned when planted, but they do not die from the pruning. They would probably have died sooner had they not been pruned.

A great many factors enter into the determination of just how a tree should be cut back. In this article only a general rule can be given. Only three to five of the best limbs should be left on the tree, and these should be cut back to eight or twelve inches, making the cut just beyond a sound bud, which points in the direction in which the limb should grow. All trees should be kept low-headed. Be careful not to cut off the lower limbs, when it is not necessary, as they are usually the very ones to be left. The lowest limb should be from eighteen to twenty-four inches from the ground. If the tree has been pruned so that the top is much higher than this, it is usually best to cut the entire top off about three feet from the ground and depend upon forming the top from limbs which come out below this point. Peach trees can stand more severe pruning than either cherry or apple. Peach trees should generally be cut off eighteen inches from the ground, and if there are any branches below this point, they should be cut back to the first or second bud. Cherries and plums need practically no pruning, except to cut the branches off a foot or so from the trunk.

The Santa Fe Agricultural Scholarships.

The management of the Santa Fe Railroad is much interested in the improvement of methods of farming in the territory served by its lines. They believe that the more good farmers they have along their lines the more business will their railroad have to do. After having carefully investigated the improved methods of farming as taught by the College of Agriculture at Columbia, they believe that they can well afford to send a man or boy from every one of their counties in Missouri to the short winter course in agriculture at the University, where he can study these improved methods. They have, therefore, announced that they will offer a scholarship of $50 in cash in each of their twelve counties in Missouri through which their lines extend to the short course at the College of Agriculture next winter. These scholarships consist of $50 each in cash, which will be sufficient to pay all necessary expenses incurred by the winner while attending the seven weeks short course, beginning the first of November and lasting until the Christmas holidays. This will include living expenses and railroad fare and means that the winner will have an opportunity to attend the College of Agriculture and study the most approved methods of farming at the expense of the Santa Fe Railroad. These scholarships will be awarded in a corn-growing contest to the man or boy between the ages of eighteen and forty who grows and exhibits the best ten ears of corn in his county this year. A County Corn Show will be held this fall, some time before the first of November, in every county in Missouri through which the Santa Fe Railroad runs, where the corn entered in this contest for that county must be shown. A Farmers' Institute meeting will be held with the Corn Show and an expert corn judge from the College of Agriculture will be present and judge the corn and give valuable instructions in regard to corn growing. This man well decide which are the best ten ears and the owner will be awarded the scholarship.

The following general rules will govern the contest:

1. Any man or boy between the ages of eighteen and forty, and a resident of one of the counties in Missouri traversed by the Santa Fe, is eligible.

2. All persons entering the contest shall signify this fact by sending their name, age, postoffice address and county to the College of Agriculture, University of Missouri, Columbia, Missouri, not later than September 1, 1911.

3. No contestant shall make an exhibit except in the county in which he resides.

4. The winning ten ears of each county shall be sent by express or freight, charges prepaid, to C. B. Hutchison, Secretary Missouri Corn Growers' Association, Columbia, Mo., where they will be placed on exhibition at the State Corn Show and entered for prizes there, if the owner desires.

5. The winning ten ears from each county after the State Corn Show become the property of the Santa Fe Railroad.

All who expect to enter this contest should secure some good seed of a standard variety that is well adapted to their locality. If you do not have good seed yourself, get it, if possible, from some one in your own neighborhood, as this is suited to your own soil and conditions and will give better results than corn brought in from a distance. Where seed cannot be secured in this way, write the College of Agriculture, Columbia, for a list of seed corn growers in Missouri who have good seed corn for sale. The College of Agriculture will furnish to each person enrolled in this contest circulars giving directions for plowing and preparing the ground, cultivating the corn and instructions for selecting a sample of corn for show.

Where there is a Farmers' Club the Secretary should correspond with the College of Agriculture at an early date and arrange to advertise this contest in his county. Where there is no such organization, it is suggested that the County Superintendent of Schools, or some public-spirited newspaper man, banker, merchant or other man of business, take charge of the matter and arrange all details.

For membership blanks and any further information desired write to C. B. Hutchison, Secretary Missouri Corn Growers' Association, College of Agriculture, Columbia, Missouri.

Study Your Wheat Before You Harvest It

If the yield and quality are bad you must do better. If they are good it will pay you to make them better. A better fertilizer will do it. The usual wheat fertilizers do not contain enough

POTASH

Use 6 to 8 per cent. Potash, instead of 1 to 2, and balance the phosphoric acid of the bone or phosphate.

Tell Your Dealer about this **Now,** before the fertilizer salesman arrives. Write us today for our two free books, "Fall Fertilizers" and "Home Mixing."

We sell Potash Salts in any amount from 1 bag (200 lbs.) up. Write for prices, stating quantity needed.

A Horse Lover.

James R. Keene, who is noted no less as a horseman than as a financier, said at a luncheon at his Cedarhurst residence:

"My love of horses has been a great comfort to me all my life. I have always kept my horses in their place, though I haven't allowed them to interfere with my business.

"Some men carry their love of horses altogether too far. Such an one was a young father who stood, with his fair wife, before the crib of their first born.

"'Isn't he wonderful?' the young mother cried. "Did you ever see anything like him at twenty-six months?'

"'Maternal love is all very well,' the father retorted, impatiently, 'but please don't try to compare it with a two-year-old thoroughbred.'"

The Northewst Pacific Farmer says: "A turnip grown at Florence, Oregon, measures thirteen inches one way and eleven inches the other."

EVERYBODY CAN LAY IT.

FARM ACCOUNT BOOK

Offered as a Subscription Premium With The National Farmer and Stock Grower.

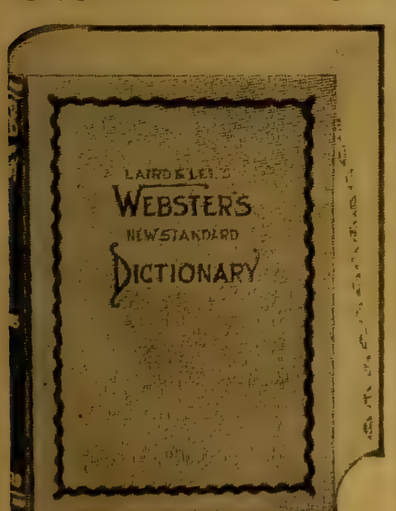
Nothing contributes more to the success of the farm than the habit of keeping records and accounts. On many large farms proper accounts are kept with the same system and popularity that bankers and merchants keep their books. The consequence is that all such farms are conducted upon business principles, and the record of former years is a help, guide and reference of considerable value.

On smaller farms there is often no systematic book-keeping, not even a monthly account of money received and money expended and showing the balance on hand. This unsatisfactory failure to keep records results in disputes, trouble and disaster. A firm in Iowa has bound under one flexible cover a Farm Record and Account Book which is designed toenable the farmer to keep a satisfactory record. It has an inventory page, an income account for products sold, an expense account for money paid out, a summary of monthly receipts and expenditures, a time book for the year with account for work done; also pages arranged to show the cost of each crop produced, together with a performance record for twenty cows. We do not pretend that this is a complete set of up-to-date farm books, but we do say that anyone who will send 50 cents to pay for one-year's subscription to The National Farmer and Stock Grower is at liberty to select the Farm Record and Account Book as a free premium, and we will send one copy postpaid, safe delivery guaranteed. It is well worth having and worth studying. Send money order for 50 cents to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

WEBSTER'S DICTIONARY.

The Most Compact, Useful, Handy Book Ever Issued by the American Press.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special



edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces. Our offer to you: Send us One Dollar and we will send you The National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Difference in Government.

In Canada, to help cold storage along, the government sometimes guarantees the payment of the first mortgage bonds, whereas in the United States the principal government efforts are towards putting cold storage out of business. It is said, and probably with some show of reason, that Canada has a more intelligent and enlightened government than the United States.

The following item is from the reports of the United States Department of Commerce and Labor:

"A cold-storage plant, owned by the Island Cold Storage Company (Ltd.), of Charlottetown, is now in full operation here. Its establishment was aided by the provincial government, which guaranteed the payment of the $20,000 first mortgage bonds. Prince Edward Island is a large producer of cheese, eggs, butter and dressed meats, which in the absence of cold-storage facilities often had to be sold when the markets in these commodities were overstocked."

Water For Household Use.

So important is the matter of pure water for household use that many of the governments of the world have made repeated extensive investigations relative to domestic water supplies. This has been done largely in the effort to prevent the spread of disease, but there are additional reasons for insuring pure water for use in the household.

For instance, there is the necessity for good water in the washing of butter. Washing butter in impure water often results in giving it an off flavor, after the butter has become a few days old, and the germs in the butter have had time to develop into minute forms of vegetable life.

A few years ago we read in the papers about butter sent from Australia and proving unsalable on the English markets because of its so-called "fishy" taste. Some trouble of a similar nature was also reported from creameries in the state of New York. An investigation showed that the butter had been washed in water containing a minute form of vegetable life, which on development produced the fishy flavor. Greater care had to be used in securing water for the purposes of washing butter.

At various times in this country and in different localities the milk has become stringy, bitter or coagulated as the result of the presence of a minute fungus that got into the milk by way of the water used in washing the utensils in which the milk was placed after being drawn. Formerly such abnormal conditions of the milk were supposed to indicate the presence of disease in the cows.

But farm animals seem to be less affected by impure water than are human beings. Some of our most dreadful diseases are spread by means of water. Typhoid fever especially is supposed to be carried more commonly by water than in any other way. Therefore the greatest possible effort should be made to secure for household use water that is absolutely free of germ life.

It is asserted in a publication issued by the United States government that there is more typhoid on the farms than in the cities, in spite of the fact that on the farms it is easier to get pure water than it is in the cities. On the farms the presence of contaminated drinking water is due very largely to a non-realization of the factors that go to produce the contamination. Water closets, barns and wells are located near the residence to have them convenient, with the result that the well is contaminated from the two sources, to say nothing of the sink-spout.

It is entirely feasible on farms to locate the well at a distance from closets and barns and have the water conveyed through underground pipes any distance to the house and other buildings. The cost would be more than offset by the savings in doctors' bills. To get good water on our American farms it is only necessary to wake up the people to a realization of the dangers actually lurking in foul water.

The Frisco Agricultural Scholarships.

The Frisco Railroad Scholarships to the winter short course in agriculture at the State University at Columbia last winter created such an interest among the young men of these counties that the Frisco has decided to offer these scholarships again this year. They therefore announced that they will offer a scholarship of $100 in cash in each of the forty-five counties of Missouri through which their lines extend to the winter course at the College of Agriculture next winter. These scholarships consist of $100 each in cash, which will be sufficient to pay all necessary expenses incurred by the winner while attending the short course for the full term of fourteen weeks, from the first of November to the first of March. This will include living expenses and railroad fare and means that the winner will have an opportunity to attend the College of Agriculture and study the most approved methods of farming at the expense of the Frisco Railroad. These scholarships will be awarded in a corn-growing contest to the man or boy between the ages of eighteen and forty who grows and exhibits the best ten ears of corn in his county this year. A County Corn Show will be held this fall, some time before the first of November, in every county in Missouri through which the Frisco Railroad runs, where the corn entered in this contest for that county must be shown. A Farmers' Institute meeting will be held with the Corn Show and an expert corn judge from the College of Agriculture will be present and judge the corn and give valuable instructions in regard to corn growing. This man will decide which are the best ten ears and the owner will be awarded the scholarship. (The same rules apply to the Frisco as to the Santa Fe Scholarships.)

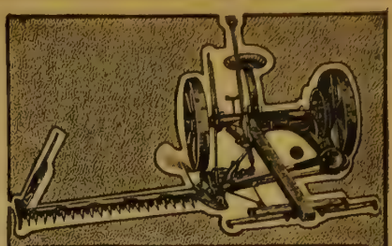
Oklahoma Farm Census.

According to the United States Census of 1910, the state of Oklahoma contains 189,438 farms, averaging 152 acres. The total acreage in farms is 28,717,000, which is an increase of 25 per cent. over ten years ago. The improved farm acreage is 17,496,000, which is an increase of 104 per cent. over ten years ago.

In Oklahoma the land alone is valued at $22.54 per acre without buildings, and $25.65 per acre including the buildings.

In the state of Oklahoma there are 168,910 white farmers and 20,528 colored farmers. Of the total of 189,438 farms, there are 85,044 conducted by owners, 103,753 by tenants, and 641 by managers.

Distributed according to the acreage thereof, there are 7,063 farms 19 acres or under; 31,333 farms 20 to 49 acres; 38,885 farms 50 to 99 acres; 74,933 farms 100 to 174 acres; 33,700 farms 175 to 499 acres; 2,677 farms 500 to 999 acres; and 847 farms of 1,000 acres or more.



The DAIN Vertical Lift Mower

leads all others. It's easy on the horses, convenient to handle, and so strongly made that it will be doing duty years after other mowers have gone to the scrap heap.

Its **Compensating Gears** and **Cutter Bar Realigning Device** are successful examples of the wonderful inventive genius of Mr. Joseph Dain. The gears are so mounted in relation to each other that perfect balance and true mesh are permanently insured and the crank shaft is relieved of all end thrust, preventing lost motion, reducing draft and mutiplying cutting power. That is why the Dain Mower runs lightly and cuts where others fail.

Other points of superiority are: **Adjustable Draft Hitch; Automatic Clutch Shifter; Long Pitman and extra large Knife Head.**

The Vertical Lift is so handy to operate a boy can raise the cutter bar with ease. It is the only mower you can realign, yourself, right in the field with your wrench. This practical adjustment for maintaining the cutter bar in line with the pitman, means added efficiency and years of extra service.

The Dain is the mower that will give you complete satisfaction.

Consult the nearest Dain dealer; learn all about this greatest of all Mowers, and about the entire line of Dain Hay Tools, Loaders, Side Delivery Rakes, Stackers, Sweep Rakes, Presses; every one the best of its kind.

We make best hay tools because we've been specializing on them for over a quarter of a century.

Send for full particulars and a free copy of "*All About Hay*," the most complete and practical booklet on the subject every written. Write today. A postal card will do.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales will be conducted by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,

As usual, during the season of 1911. The First Sale will surely be held on

THURSDAY, JUNE 15,

And every two weeks thereafter until the close of the season. The Second Sale will be held on

THURSDAY, JUNE 29.

We will be glad to hear from Ranchmen having Horses for sale. The demand is sure to be good, especially for well-bred Mares and Geldings in good condition.

Please address

J. J. SEARCY, Sale Manager,

NATIONAL STOCK YARDS, ILL.

Our Webster's Dictionary.

We desire to invite the attention of our readers to page 15, wherein we are offering a splendid Webster's Dictionary, 756 pages, 840 illustrations. This is a wonderful book. All you have to do is to send us One Dollar. You then receive The National Farmer and Stock Grower for two years and one copy of the Dictionary, sent post free, safe delivery and satisfaction guaranteed

A First-class Commission House.

In consigning live stock for sale at the St. Louis National Stock Yards, remember the Evans-Montague Live Stock Commission Company. It is a successful firm, highly competent and persevering in the interest of their customers. The Evans-Montague Commission Company solicit consignments of cattle, hogs and sheep for sale on the market, and desire stockmen to take notice that the company has special buyers who select and buy stock and feeding cattle for their customers. Colonel James H. Campbell, the veteran and renowned cattle salesman, has recently joined this house as Vice-President, in charge of the cattle department. His presence adds strength to the organization. Stockmen requiring market information should address Evans-Montague Commission Company, Box 68, National Stock Yards, Ill.

A Notable Work Horse.

Purchased for $50 in the Bull's Head Market in 1896, Harry Boy, one of the entries in the class for old horses in the Work Horse Parade of New York on Memorial Day, has been in constant service on the streets of that city for fifteen years and is "still going strong." He is owned by Charles Rothschild, of No. 32 West 120th street, who uses him as a delivery horse. Mr. Rothschild bought him of S. L. & S. Frank, who were then in business in East Twenty-fourth street. The low price paid for him was due to the fact that he was sick with shipping fever when sold. Harry Boy won the blue ribbon and medal in his class in 1909 and again last year in the Work Horse Parade. He was no spring chicken when purchased, and his owner now estimates his age at twenty-five years.

THE SHEEP INTEREST.

A Few Words Concerning the Tennessee Lamb Industry and the the St. Louis Market.

Being at the National Stock Yards towards the end of May, the editor of The National Farmer and Stock Grower had a short interview concerning the sheep and lamb market with Oscar A. White, sheep salesman for the firm of Clay, Robinson & Co. He had just returned to the market from the Tennessee sheep country, where he said they are doing business just about right and afford a splendid example for farmers in other sections favorable to this industry to follow. The Tennessee lamb-raising section in a general way consists of the country including Lebanon and Nashville on the north, to Winchester, Fayetteville and Pulaski on the south. He mentioned Columbia, Franklin, Gallatin, Bellbuckle and other shipping points of importance. This lamb-raising industry has grown up in recent years and the bulk of the lambs usually arrive at St. Louis from May 15th to June 1st, and during the period they occupy the market they attract much favorable attention. This industry appears to have originated with ewes bought on the St. Louis market. In regard to the purchase of stock ewes Mr. White said the Tennessee sheepmen were the most particular of all buyers. It required a week to get together a double deck of ewes for them, and they were equally careful to use none but black-faced bucks, all pure-bred, and mostly all Shropshires. Being asked concerning the average number of sheep on each farm, he said that there were hundreds of farms that averaged forty lambs a year. They were acting together in marketing their lambs and their wool. To do this satisfactorily they had formed

MR. OSCAR A. WHITE,
Sheep Salesman for CLAY, ROBINSON & CO. at National Stock Yards, Ill.

the original lamb clubs. Some of the clubs sold their lambs by sealed bids and delivered them to the bidder or shipped them direct to market. Mr. White said that the lamb-raising industry of Tennessee was firmly established, and he believed in time it would include the entire state.

Mr. White stated further that for these Tennessee lambs St. Louis was by far the best market. They came in when there was an opening before Missouri and Illinois lambs were ready, and the buyers were anxious to get them at a fair price, usually in excess of the net result to be obtained at any other market. He said the same of Kentucky lambs, which arrive at the market in considerable numbers.

With reference to Clay, Robinson & Co. we are informed by the records of the St. Louis market that this firm sold 37⅓ per cent. of all the sheep received since June 1, 1910. The firm sold 75 per cent. of the Colorado lambs received at the market, and their gain in sheep sales is 113 per cent. greater than the splendid business done during the same period last year. All this is creditable alike to the firm as to Oscar A. White, who is the chief sheep salesman at the yards.

Included in the lamb sales on the June market at the St. Louis National Stock Yards were 145 head, 62 pounds average, shipped by Butler & Ashley, of Wartrace, Tenn. These were a little light in weight, but were sold by Mr. White at $7.75 per 100 pounds, the highest price thus far this season for Tennessee lambs.

The Wool Situation.

During the month of May the St. Louis market led the whole country in strength and activity. The June market opens strong on a basis of 21 cents for good unwashed medium. Some very good sales were made by A. J. Child & Sons. They issue a wool circular that is worth reading. Whenever there is any sign of life in the trade this firm is about the first to catch on and take advantage of it. Messrs. A. J. Child & Sons, 511 North Main street, St. Louis, Mo., sell strictly on commission, and have been in business in St. Louis since 1874.

Tennessee Lambs at St. Louis.

Recent sales at St. Louis include for F. M. McDaniels 121 head of lambs, 61 pounds average, at $7.75 per 100 pounds; for Sandy Brown, 174 head, 69 pounds average, at $7.65; also 464 head 69 pounds, at $7.50; for Perry and Lester, 1,030 head, averaging 66 pounds, at $7.65 per 100 pounds; for Hawkins & Eastes, 147 head, 69 pounds, at $7.65 per 100 pounds.

Range of Mule Prices.

All mule prices have to be understood in accordance with circumstances. A car-load of mixed mules coming to market and a car-load of selected mules going out from the market represent considerable difference in price. The following in a general way represent mule quotations, June 1st, at the St. Louis National Stock Yards: 14 hands, $75 to $145; 14½ hands, $92.50 to $157.50; 15 hands, $117.50 to $192.50; 15½ hands, $135 to $225; 16 hands, $150 to $275. Receipts continue light and the market steady to strong on extra good, big mules with weight and bone. Miners full aged, 14½ to 15½ hands high, and pit mules are the fashionable kind and best sellers. Thin, rough, blemished and out-of-class mules are slow sale and hard to sell. For special information at any time write to Holland, Nugent & Maxwell Bros., mule salesmen, National Stock Yards, Illinois.

The June Hog Market.

On June 1st, at the St. Louis National Stock Yards, the top of the hog market was $5.97½ per 100 pounds for light hogs weighing 161 pounds. The bulk of all the hogs sold at $5.85 to $5.95. Lots of fine hogs, averaging 225 to 275 pounds, sold at $5.85 to $5.90, and a good many light hogs sold at $5.90 to $5.95. The May hog receipts at the St. Louis National Stock Yards were 272,621 head.

Native Beef Steers.

At the St. Louis National Stock Yards, on June 1st, a few 1,116-pound steers sold at $6.00 per 100 pounds; also twenty head 1,402-pound steers at $6.00; twenty-three head 1,219-pound steers at $5.85; seventeen head 1,232-pound steers at $5.95; eleven steers, 1,199 pounds average, at $5.80; thirty steers, 1,040 pounds, at $5.50. These were representative sales. Choice native steers were quoted up to $6.25.

Money In Straw Stacks

You know that many years there is grain enough wasted in your straw stack to pay your thresh bill.

Why? Because you have not insisted upon the best machine to do your threshing.

The Red River Special will save it and put the money into your pocket.

Why? Because it employs the only true and certain method of beating the grain out of the straw. All other machines wait for the grain to drop out.

The Red River special **beats it out** just as you do by hand with a pitchfork.

The Big Cylinder, the "Man Behind the Gun," and the uplifting shakers **beat all the grain out** before the straw leaves the machine.

Thousands of farmers are saving their thresh bills by using the Red River Special

You can, too, if you insist upon a Red River Special doing your work.

Fred Sulyer, farmer, Ortonville, Minnesota, says, "The Red River Special saves my thresh bill."

Fred Schroeder and A. P. Case, farmers at Compton, Illinois, say the Red River Special "actually saved our thresh bills."

You can save yours. Hire a Red River Special. Full particulars furnished on request.

Nichols & Shepard Co.

Builders of Threshers and Engines

Battle Creek, Michigan

Sheep Notes.

At Louisville, Ky., the spring market for lambs opened up with choice lots selling at 6¼ cents a pound.

On Thursday, May 18th, O. A. Wright, of Randolph county, Missouri, marketed 115 head of Missouri-fed clipped Western lambs that averaged 79 pounds and brought $6.25 per 100 pounds in market. This sale was reported as being the highest thus far this season.

On May 17th J. R. Hamilton & Son marketed 1,205 clipped wethers at Fort Worth, Texas. They weighed 98 pounds average and sold at $4.25 per 100 pounds. It was said on the market that these were very fine muttons and were shipped from Kinney county.

BALE YOUR HAY THIS YEAR.

Whether you sell your hay or feed it, it should be baled. There are so many advantages in baled hay and so many disadvantages of handling loose hay that no progressive farmer can afford to dismiss the matter without serious thought and careful figuring.

In the first place, loose hay is so bulky that it takes up five or six times the barn space of baled hay. Loose hay quickly gathers dust, which causes coughing of stock and perhaps disease. The whole outside of a stack of loose hay is practically wasted by wind, rain, sun and the other elements. This often amounts to 20 per cent. of the stack. Loose hay cannot be shipped far, and the local dealer knows it. So he pays you his price and you sell, because you know that your loose hay must be sold near home.

Baled hay is compact, easy to handle, takes up comparatively little space, so can be stored until prices reach the top, when you can sell anywhere; distance does not matter much. Baled hay is always clean and fresh; loses none of its nutritive qualities and there is no waste.

The man with a hay press is the man who gets 100 per cent. out of his hay crop. How about you? Have you figured up what a profitable investment a Hay Baler is; that is, if you get a good one? Why not investigate? The Collins Plow Co., of Quincy, Ill., are the makers of the famous "Eli" Baling Presses. They have issued a fine book, beautifully illustrated in colors and large photo illustrations. They are glad to send this book free. Just a penny postal will do and you will learn much of importance about baling presses. It tells what to look out for, what to be careful of, and what not to get in a baling press. Simply address the Collins Plow Company at 2014 Hampshire street, Quincy, Illinois. A postal card will do.

Evans-Montague Commission Company

THE MEASURE OF SUCCESS attained by a SHIPPER OF LIVE STOCK depends largely upon THE COMMISSION HOUSE to which he consigns his CATTLE, HOGS AND SHEEP.

If you wish to receive TRUSTWORTHY AND RELIABLE SERVICE, and have your consignments SOLD BY CAPABLE AND CONSCIENTIOUS SALESMEN, you cannot do better THAN PATRONIZE OUR HOUSE.

The Shippers' Interests ARE OUR INTERESTS, and our rapidly-increasing business IS THE STRONGEST TESTIMONIAL of our ability TO PLEASE OUR CUSTOMERS.

CURE THAT SPAVIN

—or that Curb, Splint, Ringbone or other lameness with Kendall's Spavin Cure. Mr. Montgomery Sheppard of Richfield, N. J. writes this about

Kendall's Spavin Cure

"I have been using your Spavin Cure and have found it a sure cure for Spavins, Splints, Ringbone, Lameness, etc."

Let us send you other letters. Get a bottle of Kendall's at once. You may need it any day. At your druggists $1 a bottle, 6 for $5. Ask for "Treatise on the Horse"—Free, or write to

Dr. B. J. Kendall Co., Enosburg Falls, Vermont, U.S.A.

A Word to Wool Growers.

There is a time for action and this is the time. There is a time for letter writing and the time is right now. The wool-growing industry is in danger. Every sheep man is entitled to the benefit of the laws of the nation as they now stand, and none of these laws should be changed for the purpose of doing him an injury. But the avowed purpose of Congress as now assembled is to reduce the duties on wool and woolen goods. The intent is to legislate in favor of the inhabitants of all other countries that grow wool. None of the members of the House of Representatives were elected to represent New South Wales or Argentine, but they are acting just the same as if they did. The lamented Aldrich represented the interests of manufacturers of New England and the cattle raisers of Argentine. He voted for every protective duty on manufactured goods and he voted for the admission of hides free of duty. There are Protectionists who are in favor of retaining the duty on flour and admitting wheat free of duty. There are Protectionists who are in favor of high protective tariffs on woolen goods and free admission of raw wool. There was a good old time when the wool-growing interest represented the balance of power in Ohio and Pennsylvania, but that time has gone by. There is very little influence now, except that which each individual wool grower can exert, therefore wool growers should write to their Senators and say what they think. Heretofore sheep raisers have fought the tariff battle alone, whereas now Washington is full of people who are in the same boat. Write and say that you are opposed to the admission of farmers' products from other countries free of duty. A list of the United States Senate is on page 13. You will be doing more good than you imagine. It is very likely that one vote will defeat a bill.

Active Horse Market.

Notwithstanding the many reports concerning dull trade at other centers, the horse market at the St. Louis National Stock Yards has had a period of activity beyond all precedent. The May receipts were 9,600 head of horses and mules, and the total was 86,500 for five months. This is the greatest record of any market for the period. The Monday and Tuesday auctions at the St. Louis National Stock Yards are conducted by Holland, Nugent & Maxwell Bros. Mr. T. H. Holland, head of the firm, is making an appeal for quality in horses. In his circular issued May 31st he said:

"We like to have big runs of horses, as it gives us more revenue, but at this season of the year we would rather have less horses and have them of a better quality, horses that Eastern buyers want. We have plenty of buyers here this week and plenty of orders to fill. While horses are not selling as well as they did three and four weeks ago, they are selling as well as anybody can expect them to at this season of the year."

Shippers of horses and mules will do well to get acquainted with Holland, Nugent & Maxwell Bros., National Stock Yards, Ill. They assemble more car-load buyers in their auction sales than other markts have horses.

Western Range Horses.

We are again instructed to advertise the dates of the Western Range Horse Sales conducted twice a month from June to November of each year by Campbell & Reid and Western Sale Stables Company at the St. Louis National Stock Yards. This is the fifteenth range horse season with this firm, and the June sales will be held Thursday, June 15th, and Thursday, June 29th. Every sale so far has been successful. The satisfactory combination called success consists of getting the shipper the full worth of his horses and furnishing the buyer

the sound, well-bred animals that he can prepare for the domestic sale ring in reasonable time at a living profit. At these sales the shippers are assured of the best class of buyers on the continent, because they know by experience how to handle the horses, and the buyers are assured of the finest bunches of horses on the Western ranges being on hand and for sale at auction. These sales are conducted under the management of J. J. Searcy, Secretary, whose post-office address is National Stock Yards, Ill.

Missouri Lamb Club Shipment.

In the vicinity of Columbia, Mo., a number of persons have formed a lamb club under the management and with the assistance of Prof. R. S. Besse, of the Missouri Agricultural College. The first shipment arrived at the National Stock Yards on June 1st. There were ninety-five lambs, averaging 65 pounds, that sold at $7.50 per 100 pounds, and that price was 25 cents above any other lambs sold on the market that day. They were sold by Oscar A. White, sheep salesman for Clay, Robinson & Co.

Light-weight Cattle Prices.

There was a time when 4 cents a pound was a high price on the market for the best kind of 850 to 950-pound steer cattle, even though 1,500 to 1,700-pound cattle might be bringing 6½ to 7 cents a pound on foot. All this is changed, however, and the little steers sell side by side with the heavy cattle. One 1,600-pound steer at 6 cents a pound would bring $96, and it would require three 800-pound steers at 4 cents a pound to bring the same money. In Chicago, recently, fifty yearlings, 760 pounds average, brought $6.20 per 100 pounds. The next sale was twenty-six steers, 1,520 pounds, at $6.20; another sale was twenty-four yearlings, 760 pounds, at $6.40; and the next sale was thirty-four steers, 1,740 pounds, at $6.40; another sale was sixteen yearlings, 1,038 pounds, at $6.30; and next to it eighteen steers, 1,432 pounds average, at $6.38; another sale was thirty yearlings, 785 pounds, at $6.10; and next to it seventy-four steers, 1,412 pounds, at $6.10. These are summer conditions, but similar sales were made in winter. Several years ago The National Farmer and Stock Grower began to show that this condition had come, and it favored the farmer who would be sure to have the proper breeding so as to insure top prices for light cattle by proper feeding and fattening.

Money in Straw Stacks.

That is a good subject. The wheat in the sacks amounts to so many bushels per acre, and through inefficient machinery there are several more bushels left in the straw stacks. See page 16.

Horse Market Prices.

Horses are bought to sell again, for shipment to other markets and direct to the user. Quotations represent bulk of sales. The following horse quotations represent the general trade, June 1st, 1911, at the St. Louis National Stock Yards: Heavy draft, good to choice, $165 to $235; Eastern chunks, $140 to $185; Southern horses, good to extra, $125 to $165; Southern horses, fair to good, $75 to $115; Southern horses, common, $50 to $65; drivers, choice, $155 to $225; plugs, $15 to $25.

HORSE AND MULE SALESMEN.

HOLLAND, NUGENT & MAXWELL BROTHERS.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

HORSE AUCTIONS EVERY MONDAY AND TUESDAY.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Let us sell your Horses and Mules on commission.

HORSE DEPT.—Nugent Bros., Maxwell Bros.
MULE DEPT.—Ed. Conway, Lan Morris.
AUCTIONEERS—Tim Holland, Ike Howard.

Write for market information.
Address,
HOLLAND, NUGENT & MAXWELL BROTHERS,
P. O., National Stock Yards, Ill.

Don't Have a Blind One

"VISIO"

An Absolute Cure for Moon Blindness

(Opthalmia), Cataract and Conjunctivitis

Shying horses all suffer from diseased eyes.

"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our GUARANTEE to refund money if it does not cure.

$2.00 per bottle, postpaid on receipt of price.
VISIO Remedy Ass'n, 2472 Calumet Ave., Chicago, Ill.

Before After

ABSORBINE

Will reduce Inflamed, Strained, Swollen Tendons, Ligaments, Muscles or Bruises, Cure the Lameness and stop pain from a Splint, Side Bone or Bone Spavin. No blister, no hair gone. Horse can be used. $2 a bottle delivered. Describe your case for special instructions and Book 2 E free.

ABSORBINE, JR., the liniment for mankind. Reduces strained, torn ligaments, enlarged glands, veins or muscles—heals ulcers—allays pain. Price $1.00 a bottle at dealers or delivered.

W. F. YOUNG, P.D.F., 106 Temple St., Springfield Mass.

Bickmore's Gall Cure

Harness and Saddle Galls

Great hot weather remedy for galls, sore shoulders, wire cuts, sores. A healing, curing salve in use 18 years; standard remedy with horsemen. Cures while horse works. Sold by dealers; money back if it fails. Send 50 (for postage and packing) and get sample and 84-page valuable horse book.

Bickmore Gall Cure Company
Box 482 Old Town, Maine

Some Well-established Truths in Poultry Feeding.

Too many good, fresh bones are going to waste. A mill to cut or grind bones, and a small expenditure of muscle will make them into an exceedingly valuable food for poultry. Fowls require animal matter, and that and lime with phosphorus is furnished in the green cut bone. The writer notices that in a certain large city the butchers are using bone cutters to help them to dispose of their by-product of bones. The green cut bone retails at four cents a pound. This shows the value of the bone after it is cut. A ton of bone thus disposed of is worth $80. Why should bone be allowed to go to waste on a million American farms?

Be sure the little chicks have a meat ration mixed with their grain ration. It will greatly accelerate their growth and give them the power to resist disease and the ravages of mites and lice. Feed one part of beef meal to five parts of grain meal and watch the results. Or give scraps of fresh meat secured from the butchers. Now is the time to try this kind of a feed for forcing growth.

Put in some seed to produce poultry food for the coming winter. Beets, carrots and turnips can be grown, quite late, for a winter supply for the poultry. But by all means sow some rape seed, so that the fowls can have a summer pasture of green stuff. Rape will grow with no care. It fights weeds and grass in its own way and soon gives a magnificent growth for the use of the fowls. It keeps their digestive organs in right condition. It costs nothing to harvest, as the fowls look after that work. It is thus a convenient and economical feed.

If any of the young chicks get the gapes, then keep all of them from hunting angle worms and do not feed worms to the chicks, for very likely the ground is infested with the parasites of the angle worms—the gape worms. Keeping the chicks from getting angle worms will have cut off the road by which the gape worms get into the trachea of the chicks.

The best feeding consists in giving a large variety of foods, including grit and plaster. Where ground bone is fed in considerable quantities the feeding of the old plaster is not necessary, as the bone furnishes lime as well as other elements.

After the young things are well up in the garden, the fowls can be allowed the run of the farm. The feed they hunt for themselves is all gain for the farmer, and the fowls prefer food they find themselves. All hard-shelled insects are very rich in nitrogen.

Feeding foods on the point of decay is not a safe practice. The food taken by fowls is not immediately digested, but is held in the crop sometimes for hours. If it further ferments or decays it may cause intestinal troubles for the fowls. Fowls as well as most other creatures do best on sound food.

Pullets and Hens as Layers.

In an article written by James B. Morman, of Kensington, Md., he makes a comparison of the laying of pullets and hens as follows:

The value of pullets for the winter production of eggs can be shown by comparing the number of hens kept with the number of pullets, as well as by a comparison of the egg yield of each. In December, 1909, I kept a comparative record for that month alone. The results were as follows:

"Nineteen pullets laid 241 eggs in that month.

"Thirty-five hens laid 95 eggs in that month.

"That is to say, nearly twice the number of hens laid only about two-fifths the number of eggs laid by the pullets—a ratio of about five to one in favor of the pullets.

"During the past winter I kept a complete record of the egg yields by both hens and pullets. The results were as follows:

"Twenty-two pullets laid 1,013 eggs during the three winter months.

"Thirty-one hens laid 332 eggs during the three winter months.

"By reducing these returns to the same basis, it appears that pullets during the winter months of 1910-11 laid nearly four and one-half times as many eggs as hens. Taking the results for the two winters, it is apparent that pullets on the average are about five times more valuable than hens for the winter production of eggs."

Poultry and Pet Stock.

In the week ending May 8th, at New York City, 224,303 cases of eggs were received, which are the largest receipts on record on that market. Nearly half of this enormous quantity went direct to cold storage. Eggs were selling at 14 to 21 cents a dozen, not many above 19 cents.

Afton Farm, at Yardley, Pa., markets about 20,000 green ducks annually. The ducks are dressed, dry-picked and shipped to market in barrels at ten weeks old. The chicken plant is larger than the duck farm.

In the Reliable Poultry Journal, Mr. L. J. Upham, of Webster, Mass., son of the originator of the breed, said that the first barred Plymouth Rocks were exhibited at Worcester, Mass., in 1869.

Mr. S. H. Scott, of Auckland, New Zealand, claims to have an Indian Runner duck that laid 320 large eggs in 365 days in her second season, having reached a total of 512 eggs in twenty-three months, including two moults.

There is an egg-laying competition of four birds to a pen going on in South Africa, fifty-four pens being in the contest. Up to the ninth month the first ten pens are all White Leghorns. There are more of this breed in the contest than any other, but none of them are in the last ten pens. Later on we hope to publish full results.

Whenever eggs are universally sold by the pound the pound that contains the largest number of eggs will bring the most money. Housekeepers are not trying to pay a good price for large eggs; they are trying to get thirteen small eggs for a dozen.

Eighteen entries of one dozen eggs each were competing in a contest arranged by the Pleasanton (Kas.) Observer. The weights ranged from 24½ to 32 ounces per dozen. The first prize was won by a dozen Langshan eggs weighing full 32 ounces, and there were two other dozens, one of Plymouth Rocks and one from mixed breeds, that weighed 30½ ounces. Commercial eggs are considered full weight at 24 ounces to the dozen.

Undrawn Poultry Decomposes Slowly.

A few years ago some of the idle authorities came to the conclusion that for poultry to be properly marketed it should be full drawn. It stood to reason that they were right, and yet the people who were continually handling poultry said they were wrong. It has required about three years, men, money and time to arrive officially at conclusions as follows. The result is: (1) Undrawn poultry decomposes more slowly than does poultry which has been either wholly or partially eviscerated. (2) "Full-drawn" poultry, that is, completely eviscerated, with heads and feet removed, decomposes the most rapidly.

Full particulars are contained in Circular No. 70, Bureau of Chemistry, Department of Agriculture, Washington, D. C.

Can *you* make 25% on *your* investment?

Farmers are doing this to-day in the

Arkansas Valley

of Colorado—Kansas

Why should *you* be satisfied with less?

Corn farmers rarely make 5 per cent net. Alfalfa growers often make 30 per cent net in this wonderful valley.

I know one man who last year refused $75,000 for his alfalfa hay (in stack) from 1,800 acres.

The small grower does as well, or better.

There is no element of uncertainty.

The soil is there.

The climate is there.

The water for irrigation always is available.

Just think — reservoirs 60 miles in circumference and 90 feet deep. Canals so located that every acre may be quickly and economically watered. Drops, headgates, etc., solidly built of reinforced concrete.

This land is a rare bargain at $75 to $150 per acre, the prices now asked.

The Arkansas Valley is a desirable place for a home. Climate pleasant and healthful. Social conditions unsurpassed. Good schools, good towns, good markets, good roads, churches, clubs, etc. The Santa Fe furnishes fine transportation facilities to world markets.

Buy an Arkansas Valley farm. Forty acres gives a splendid start.

Develop it, raise alfalfa, sugar-beets, grain and melons. You will prosper — your profits will enable you to get more land, and with every additional acre your independence becomes more secure.

I want you to read our book-folder, describing this Valley. It is full of the information you are most anxious to get. It will be sent to you free, on request.

C. L. SEAGRAVES, General Colonization Agent, A. T. & S. F. Ry.,
1953 Railway Exchange, Chicago.

Market View on Eggs.

From the New York Produce Review, published in New York City:

"From newspaper clippings we understand that Sioux City, Iowa, has adopted an ordinance compelling the sale of eggs and some other commodities by weight. As to eggs we think the law is foolish. The proportion of weight to numbers in eggs is little indication of value. The elements of quality in eggs, taking the season through, are, first, freshness and fullness; second, size; and third, cleanness. During the season when eggs are generally full and fresh, size and cleanness play an important part in the estimation of value, but during most of the year freshness and fullness are more important than size. The natural laws of trade provide appropriate values for eggs at all seasons according to their varying elements of quality. It is useless to attempt a regulation of values according to any one element of quality. Many a time in the year storage eggs six to eight months old will weigh more than new-laid eggs that are worth far more per dozen.

"The estimation of egg values is safely to be left to tradesmen who are catering to the wants of various classes of consumers. It is futile to attempt any artificial regulation of standards of value by law; and if we were obliged to sell all eggs by weight we would be no nearer to the ideal of assuring consumers a satisfactory quality."

The Widower's Excuse.

A certain Scotch professor was left a widower in his old age. Not very long after he suddenly announced his intention of marrying again, half apologetically, adding: "I never would have thought of it, if Lizzie hadn't died."—Harper's Magazine.

The port of shipment for the largest amount of flour is New York City.

Prices Reduced For Balance of Season.

Your Name Will Get $2 Eggs

For 50 Cents Per Sitting

The White and Brown Leghorns are the greatest layers in the world. I keep 2000 of the celebrated Chamberlain laying strains on my Experimental Farms, and to increase the sale of my Perfect Chick Feed, I will send to any one who will send me their name so I can send them my Perfect Chick Feed Catalogue, 2 sittings of Single Comb Brown or White Leghorn Eggs for $1 for the 2 sittings of 13 eggs each. Not less than 2 sittings sold. White or Barred Plymouth Rock or Rhode Island Reds or Silver or White Wyandotte or Rose Comb Brown Leghorn or Single Comb Black Minorca Eggs, $1 per sitting of 13 eggs. Leghorn eggs, $6 per 100; all other varieties $8 per 100. Large White Pekin Duck Eggs, $2 per 12 eggs. This is a rare chance to get a start of extra fine stock. Send Post Office order on St. Louis and have your orders booked early. Write for our prices on Old Trusty and Buckeye Incubators. Freight paid.
W. F. CHAMBERLAIN, (*The Perfect Chick Feed Man*)
KIRKWOOD, St. Louis County, MO.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Reciprocity in Poultry.

The American Poultry Advocate says: "Poultry keepers in New England are considerably stirred up over the prospect of reciprocity with Canada. What will be the result upon the poultryman's profits no one can accurately foretell. Some think it will make no difference; others that it will materially reduce them. The writer is inclined to take the latter view. While the amount of poultry and eggs produced in the Dominion is not large—no larger, it is said, than the amount produced in some of our great states—yet with the incentive of better markets the production can be greatly increased. It is the surplus that reduces prices. Here is a poultryman who goes to market with ten cases of eggs. The market that day calls for eleven cases, and buyers bid against each other to get the poultryman's supply. Consequently he gets a big price. The same poultryman goes to the same market a week later with twelve cases. But the market still calls for eleven cases, and for no more. There is a surplus of one case. The buyers know it and the price drops. The poultryman has hard work to dispose of his eggs, and in the end has to almost give them away. And yet he has only one more case than the market calls for. That surplus case regulates the price. The same law holds on a larger scale. A few thousand cases more a week thrown into the Boston market would reduce the price of eggs on the farm all over New England."

Care of the Mare and Foal.

[H. E. Kingman, Colorado Agricultural College, Fort Collins.]

The ideal condition for the mother, preceding the birth of a foal, is to have access to a pasture where she may be watched daily during the latter part of gestation. It is true that a mare may be worked up to the time of foaling, and there are instances of the colt being born while the mother is still in harness, but this is far from being a good practice. Severe exertion is a frequent cause of abortion, and at the best the young colt can not receive the proper amount of nutrition to make him grow if the mare is obliged to do hard labor.

A pasture gives the mother opportunity to take plenty of exercise, and if green grass is present, her bowels should be in good condition, which is highly important.

If it is possible, she should have a paddock or pasture by herself. Mules are especially annoying and frequently kill young colts. Other mares and even geldings may claim the colt and cause trouble. On the open range nature provides for this, all animals seeking seclusion during parturition.

Then, the green grass pasture is probably the cleanest place about the farm.

In case of storm, or where it is impossible to provide a paddock or pasture, a large box stall may be used. There should be plenty of clean straw, which may be sprayed with a weak solution of carbolic acid, say, a teaspoonful to a pail of water.

The colt should come fore feet first and right side up. If in any other position, there is something wrong, and the mother should be carefully watched so that help may be secured quickly if it is needed.

If the colt is born in the pasture and there is no reason to believe that the umbilical cord should become infected, then the cord should not be interfered with; but if other colts on the same farm have developed umbilical infection, or the colt is born in the stable or corral, then the cord should be ligated close to the body and the stump washed with a one per cent. solution of carbolic acid. It usually pays to call a veterinarian to take charge of such cases.

Ordinarily, it is not best to bother the mother with your help or advice, but in extremely inclement weather the little fellow may be helped up and dried with a clean towel; better not at all than to use a dirty sack. Later, if he has trouble in finding his dinner, you may offer some assistance.

The colt's bowels should move within the first twelve to twenty-four hours. Constipation is a very common trouble and may usually be relieved by an enema of warm water.

The mare's udder should be milked out for the first few days, if the colt does not take all the milk. Unless this is attended to, inflammation of the udder may develop and check the secretion of milk, so that the colt will not receive as much as he should when he gains his strength.

Young mares sometimes refuse to allow the colt to nurse because of chapped teats, sensitive udder, or nervousness.

Do not try to drench a colt. If it is desired to feed the little fellow, provide him with a bottle and nipple; there is great danger of causing mechanical pneumonia if pouring fluids into the mouth is attempted.

Handsome Trophy For Corn.

The accompanying illustration shows the prize cup donated by the International Harvester Company to the American Land and Irrigation Exposition, and to be awarded to the farmer growing the best thirty ears of corn exhibited at the Exposition. The cup is twenty-four inches in height, is pure silver, and weighs 200 ounces. The Exposition will be held at New York City next November.

The corn harvesting scene is finely executed in relief, and the shock of corn around the base is most artistically executed. The design was chosen from numerous sketches sent in by a number of silversmiths. It was submitted by the Mauser Manufacturing Company, New York City, whose designs were accepted for prizes to be awarded at the Exposition for wheat, barley, oats, potatoes, sugar beets and cotton.

In its announcement relative to the Exposition, the Canadian Pacific Railway states that the finest wheat exhibit of the world will be on exhibition, and it is also believed that the finest potato and apple exhibits of the world will be shown at the Exposition.

Any particular relating to the exhibits to be shown and the prizes to be awarded can be secured by addressing Gilbert McClurg, General Manager, Singer Building, New York City.

Fruit Growers Turn Canners.

When talking to some fruit growers a few weeks ago, Mr. F. S. Stahl, of Quincy, Ill., said: "I think there is more wisdom than wit in the answer of the young lady, who, when asked what they did with all the fruit that grew on her father's farm, replied: 'We eat what we can and can what we can't.' Growers are realizing more and more, each year, that it pays them well to can their surplus fruit and vegetables. You see there is always a good market for canned goods, whereas the bottom often drops out of the fresh fruit and vegetable market, and the grower has to let his produce go at a big loss or have it rot on his hands. Each season more farmers and fruit growers buy my canning outfits, and I receive stacks of letters telling of their success and of the increased profits they are making. Many growers are now letting great quantities of fruits and vegetables go to waste that might easily be turned into a good sum of money with a Stahl Canning Outfit." Stahl Canning Outfits are made in sizes to suit all requirements and may be used indoors or out. They put up either in glass or tin. Everyone interested should write to Mr. F. S. Stahl, Box 404 J, Quincy, Ill., for his free book, giving complete information and telling how to market canned goods.

Nature's Incubator.

On a ranch in a valley of the Colorado desert we find a new and strange method of hatching chickens.

Many artesian wells are in this valley to furnish water for irrigation. They are made by drilling a hole in the earth, and as the dirt is drawn out, a pipe is pushed in till water is reached, which then rises to the top and flows over the edge.

One hole was drilled for seven hundred and fifty feet into the earth, and a flow of water came up with a temperature of one hundred and two degrees. Since chicks will hatch when eggs are kept just about as warm as this for twenty-one days, the people who own this well decided to use its heat to hatch eggs.

The earth was dug away from the pipe, so that the water, as it flowed over, formed a pool, in which an ingenious form of incubator can be submerged.

Of course the eggs would spoil if placed directly in the water, so a round can of galvanized iron was made, eighteen inches in diameter and six inches deep. By stretching the arm and hand down this chimney the eggs are placed on straw on the bottom of the can. In this way, too, they are turned twice a day, and out of the chimney the chicks are drawn when two days old. They are then placed in brooders and given their first food and water.

The can is securely fastened in the warm pool by weights. The only things that appear above the water are the chimney and the end of a small tube which is inserted in the bottom of the can and curves upward.

Through the chimney the foul air rises and escapes. Into the tube rushes fresh air with moisture which ascends as vapor from the water. Both are necessary to give health and strength to the little birds growing in the shells.

These chicks are as strong as any chicks have ever been, and hatched in this way it is claimed that they are out of their shells one day earlier than when a hen sits on the eggs.—From "Nature and Science" in May St. Nicholas.

Illinois Yearlings Top the Market.

On Wednesday, May 17th, at Chicago, Messrs. Clay, Robinson & Co. sold for Carl J. Johnson, of Altona, Ill., a car-load of yearling steers and heifers, grade Shorthorns and Herefords, which brought $6.40 per 100 pounds. Although there were 18,000 cattle on the market that day, these yearlings outsold all other yearling cattle by 15 cents per 100 pounds. They also outsold the choicest load of 1,420-pound steers by 25 cents per 100 pounds. Mr. Johnson attended the market and was very much pleased at the manner in which his stock was handled and sold.

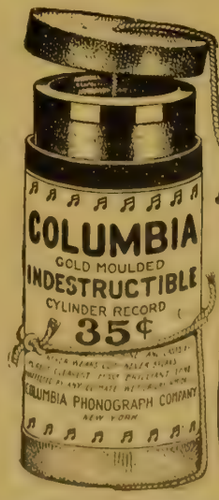
"A little neglect may breed mischief; for want of a nail the shoe was lost; for want of a shoe the horse was lost; and for want of a horse the rider was lost."—Benjamin Franklin.

Crash! Another Wax Record Gone to Smash.

If you own a Phonograph or Graphophone (Edison or Columbia), never buy another wax record for it. Get ONE Indestructible Record from your dealer.

Or let us mail one to you:—35 cents for the 2-minute) or 50 cents (for the 4-minute) postage free, and a catalogue with it.

Play it every day for ten years and you will still have it, good as new. Almost too good to be true? Try it! Prove it! Send for one!



Any cylinder machine, of any make, will play Columbia 2-minute Indestructible Cylinder Records.

BY MAIL,

ALBERT S. ENNIS, 712-21 Central National Bank Bldg., St. Louis.

Read about The Book of Live Stock Champions advertised on page 3.

MILL CREEK STOCK FARM,

The home of the noted Starlight family of Jacks and Jennets for the past thirty-five years, is located seven miles southeast of Nashville, Tenn., on the N. C. & St. L. R. R., at Asylum Station, and has on hand at all times a nice lot of Jacks and Jennets, all of the best blood, from six months to six years old, for sale at reasonable prices. Write for catalogue. Also Jersey Cattle.

THOS. H. EZELL, Prop.,
(son and successor to the late H. C. Ezell),
Nashville, Tenn., Sta. B, R. F. D. No. 7.

A View on Weaning Pigs.

Pigs should not be weaned until they are at least eight weeks old, and if the sow is not to have a second litter, or if there is time enough in case she is, it is better to let the pigs suckle until they are ten or twelve weeks old. Farmers often get in a hurry and wean pigs when six weeks old; but unless there is an abundant supply of milk, and especially good care is given, the pigs are likely to become stunted, sometimes so severely that they never recover.—White Breeders' Companion.

The Standard Watch Case.

In buying a watch, be sure to obtain the Keystone Watch Case. In order to understand this subject, see page 23. It is easy to obtain the benefit of the guarantee, for the reason that it is engraved inside every case. If you will take the trouble to examine the case you will then know exactly what you are buying, just the same as you know a gold coin issued by the United States Mint. The subject is worth investigating by all who buy watches.

Expected $6.25 to $6.35; Got $7.15.

"I was most agreeably surprised this week at Chicago. Just before shipping eight loads of lambs we agreed that $6.25 to $6.35 per 100 pounds would prove satisfactory to us at that time. We sold them through Clay, Robinson & Co., Monday, Tuesday and Wednesday at $7.15 per 100 pounds, or 80 to 90 cents per 100 pounds more than our fondest expectations, with only one load of culls out at $6.50. There is no sheep selling force in the force equal to Clay, Robinson & Co.'s. We have been marketing our stock through them for eight years. They were the first to ever obtain $10 for lambs at Kansas City, and they did with ours last year."

This is the manner in which E. B. Leatherman, of the extensive and successful firm of Leatherman & Leasure, of Lamar, Colo., expressed himself Wednesday after sale of his lambs at Chicago.

Get a Good Car Cheap.

An innovation in automobile selling methods and one which will place within reach of many a used car of high quality, backed by the reputation of a long-established company, has just been adopted by the makers of Rambler Motor Cars.

In this issue a special advertisement appears calling attention to this new plan.

Many old Rambler owners, and there are thousands of them in all parts of the country, have purchased new Ramblers this year. In exchange for the new cars they have turned in their used cars. These cars have been taken apart, worn parts replaced and the entire car rebuilt, repainted and readjusted. Each one has been thoroughly inspected and tested and is now offered at a special price to immediate purchasers. The bargains offered are unusual because the cars are to be sold with the same guarantee of satisfaction and service that goes with the new Rambler.

The Thomas B. Jeffery Company is one of the most substantial in the industry and has the highest possible rating in Dun and Bradstreet's.

An immediate reply to this advertisement will place within reach of the inquirer an opportunity to get a car of high quality at the lowest price, without risking poor service afterwards. See page 2.

A Few Nut Quotations.

At St. Louis, towards the end of May, consignments shipped in to be sold: Peanuts, 3 to 3½ cents a pound; Italian chestnuts, 7c. a pound; pecans, 9c. a pound; black walnuts, 40c. a bushel; hickory nuts, large, at 40c. a bushel; shellbark, 75c. a bushel; hazelnuts, 5c. a pound.

One-day's Sales of Hay.

At the close of the month of May the following sales were made in one day at St. Louis and East St. Louis. Sales on St. Louis Side: One car clover, no grade, at $11 per ton; one car clover-mixed at $17.50; one do. at $18; one car part do. and part timothy at $19.50 round. Timothy—One car thrashed at $12; one car No. 2 at $17; one do. at $17.50; seven do. at $18, three r. c.; two scant No. 1 at $18.50; one do. at $19; five No. 1 at $20; one do. at $20.50; two do. at $21; three do. at $21.50. Prairie hay—One car Arkansas at $8.00; one No. 3 at $10.50; one No. 2 at $12; two do. at $12.50; two do. at $13; one No. 1 at $14.50; one choice at $15. Alfalfa—New quotable at $12 to $17, according to condition. On East Side: One car heavy clover-mixed at $13; one car clover-mixed at $15; one do. at $16.50; one car part clover-mixed and part timothy at $19, delivered to St. Louis Side. Timothy—Three cars No. 2 at $17; two do. at $17.50; two do. at $18; four No. 1 at $19, one delivered to St. Louis Side; two do. at $20; one do. at $21. Clover—One car No. 2 at $12.00.

STEER AND HEIFER BEEF.

Being the Summary of Results From Experimental Feeding.

Widely different opinions are held as to the comparative value of steer and heifer beef. American packers rate steers at from 25 to 50 cents per hundred more than heifers of the same age, breed and general qualities. On the other hand, the opinion in England is the reverse, heifer beef being rated higher than steer beef.

For some years feeding experiments have been made at the Iowa Station to study the comparative value of steers and heifers for fattening. In the first trial one lot of steers, one lot of spayed heifers and one lot of open heifers were used. They were all grade Shorthorns, as nearly alike in breeding and development as possible. There were five animals in each lot. The lots were fed and treated in the same manner. Seven of the heifers calved during the trial, which interfered with the comparison.

The steers made a larger gain and sold for one cent per pound, live weight, more than the heifers. During the whole test, which lasted about eleven months, the steers made an average gain of 806 pounds; one open heifer, clear of calf, gained 775 pounds; four open heifers that had calves made an average gain of 628 pounds; two spayed heifers, clear

of calf, made an average gain of 736 pounds; and three spayed heifers that had calves averaged 645 pounds gain.

The steers were sold at 5.75 cents and the heifers at 4.75 cents per pound, live weight. Allowing 3.5 cents per pound for the steers and 2 cents for the heifers at the beginning of the trial, there was a profit of $64.39 on the steers, $30.51 on the unspayed heifers and $13.76 on the spayed heifers. The average proportion of beef in the carcass was 63.2 per cent. for the steers, 62.4 for the unspayed heifers and 62.8 for the spayed heifers.

When slaughtered, the carcasses were cut and judged by an expert. The heifers gave a larger percentage of prime cuts (ribs and loins) than the steers, so that, on the basis of the meat and by-products obtained and the price paid for the steers, the heifers were worth from 0.57 to 0.62 cent a pound more than was paid for them.

Crediting each lot with the actual value of the different cuts and the by-products, and not including the expense of killing and handling, it is calculated that, at the prices which the butcher paid, he made $20.45 on the steers, $58.12 on the unspayed heifers and $64.84 on the spayed heifers. In other words, the returns made by the heifers would have justified a purchase price of $5.37 per hundred for the spayed heifers and $5.32 for the open heifers, instead of $4.75 for each, and still have left the same profit as with the steers.

The results of a second trial to compare steers and heifers for beef production have been recently published. The test was made with fifteen pure-bred or high-grade Herefords. The animals were divided into three equal lots, one of steers, one of spayed heifers and one of open heifers, and all were fed alike during fourteen months.

The results of the experiment are briefly summarized as follows:

Results of Feeding Steers and Heifers For Beef.

Steers—Average weight at end of test, 1,388 pounds; average daily gain per head, 1.71 pounds; dry matter eaten per pound of gain, 8.70 pounds; average cost of feed per pound of gain, 4.08 cents.

Open heifers—Average weight at end of test, 1,300 pounds; average daily gain per head, 1.86 pounds; dry matter eaten per pound of gain, 7.67 pounds; average cost of feed per pound of gain, 3.65 cents.

Spayed heifers—Average weight at end of test, 1,337 pounds; average daily gain per head, 1.70 pounds; dry matter eaten per pound of gain, 8.60 pounds; average cost of feed per pound of gain, 4.05 cents.

As shown by the experiment, the heifers made a slightly greater average gain from correspondingly less food and at a less cost than the steers. Carefuly conducted slaughter and block tests did not reveal any material difference in the character, composition or quality of meat from steers and heifers, although the percentage of high-priced cuts, ribs and loins was greater in both lots of heifers than in the case of the steers.

It has been claimed that the principal cuts in heifer carcasses contain more fat than those of steers and are therefore less profitable to the consumer. The average cost of the beef to the firm purchasing the cattle raised in these experiments was 6.51 cents for the steers, 6.21 cents for the spayed heifers and 6.14 cents for the open heifers. The average selling price received by them was 6.59 cents for the steers, 6.26 cents for the spayed heifers and 6.24 cents for the open heifers.

It was observed in this and other investigations that under similar conditions heifers are inclined to take on flesh a little more readily than steers. Larger gains by the heifers may not be shown, but there is a tendency to finish at a little earlier stage in the process of fattening. The difference between steers and heifers in this regard, when fed under the same conditions, has also been noted by practical stockmen feeding on an extensive scale.

The fact is emphasized that heifer beef has been much underestimated, since in both trials the heifers have returned a higher net profit on the block than the steers, notwithstanding the fact that the steer beef was rated higher than the heifer beef. So far as could be learned from these experiments, spaying had no particular influence on the gains made.—Farmers' Bulletin No. 73, United States Department of Agriculture.

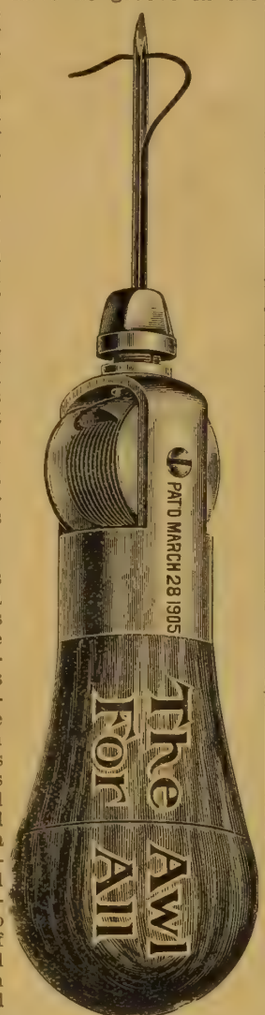
THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

A farm on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires a needle with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl, and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.



Anyone who will send One Dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Mrs. Bruce's Vacation.

Mrs. Bruce had always wanted a vacation and she wanted it right in the heat of the year when other people were having their vacations. But how could a busy farmer's wife who stood by her husband in all he did, get away from home during the hot months?

"I want to go bathing and boating and picnicing and I want a rest from cooking in a hot kitchen in hot weather," she cried as she dropped into a chair and wiped her perspiring face with her blue-check apron. Her husband looked at her in surprise. His Susan did not often complain, which was probably the reason he took notice when she did raise her voice. Then, after a period of thought he said: "There'll be a little lull between now and harvest. If our woods would satisfy you, we could take the boys, tent and all and go down there to live for a few days. We could take turns coming up and caring for the stock and you'd not have any house to clean up, nor company to entertain, nor any hot kitchen to cook in."

"Why, George, what an awfully bright idea!" cried Susan. "Our woods is lots prettier than some of the places twenty miles from here, where the young people go camping. We'll live on milk and eggs and fruit canned stuff just like they do when they go off camping. George, no mere man could ever know what that means to a woman who has been cooking herself as well as the meals every one of these hot days."

The next day the boys loaded the big tent, some bed covering, a few dishes and the other small equipment necessary for camp life onto the big wagon and drove over to the woods to get things in readiness. Meanwhile Mrs. Bruce drove to town and laid in the necessary supplies. Then the Bruce family locked the farm house and went into camp, as free from household cares as though they were miles away, and yet near enough so the boys could give oversight to the live things on the place. Mrs. Bruce swung in the hammock and read by the hour; she hunted the woods for treasures; she tramped with the boys to a lake three miles away and went boating and bathing and fishing. No one depended upon her for the cooking. Everyone lent a hand and the meals were so simple that it was almost no work to prepare them. Only one stipulation was made, and that was, that there should be a great quantity, for how they did eat! And Mrs. Bruce admitted that she could eat as much as her husband or the boys. Five days was all that could be given to this care-free life, for the farm duties soon called them. But such a five days! The mother became a girl again, the father a boy. The boys discovered an unknown kindred spirit in their father and mother—a spirit that had not been revealed in the hard work-a-day life. There was an unconscious renewing of old sweet ties between the husband and wife, which reminded them of the days when he came a-courting. Those five days spent in camp a few rods from the farm house were only a little thing, but little things so often mean so much.—Janet Thomas Van Osdel.

For Summer Ills.

An excellent remedy for all bowel troubles peculiar to children is made by boiling enough twigs from the common peach tree to make a strong tea, then sweeten to taste and give a teaspoonful after each evacuation.

In stubborn cases, use an injection of lukewarm water with a teaspoonful of corn starch dissolved in it, night and morning, and keep the feet and lower limbs warm.

There is nothing better for a sprain than bruised peach leaves bound on as a poultice, and the bruised peach leaves bound over a fresh cut or wound of any kind will often cure it without anything else.

For a sudden attack of diarrhoea there is nothing equal to a tablespoonful of raw flour in a glass of cold water, to be taken in two doses half an hour apart, and another excellent remedy is made by steeping green tea in new milk, just letting it come to a boil, and when cool take one tablespoonful at a dose. In cases of sudden and severe pains in the bowels caused by an accumulation of gases in the stomach, a hot infusion of peppermint is a valuable remedy for the older children, and for the smaller ones who are troubled with colic two or three drops of the essence in water will quickly give relief.

An excellent remedy for hives is made by mixing thoroughly a cupful of molasses, a teaspoonful of cream of tartar and a tablespoonful of powdered sulphur. Take a teaspoonful of this mixture every morning before breakfast until quite relieved and bathe the hives several times a day with a lotion made by dissolving two tablespoonfuls of powdered boric in a quart of boiling water and adding a teaspoonful of starch, boiling all together and using when cold.

When baby's skin is chafed, put a little boric powder into a little warm water and sponge the chafed skin after her bath and dust with a good toilet powder, and there is none better than pulverized starch and boric powder mixed. To prevent perspiration, dust the affected parts with the dry boric powder, as this will absorb the moisture and prevent odor, and buy some salicylic soap and use that to wash the parts most affected; and to prevent any odor from the feet, bathe with this soap and sprinkle a little of the boric powder in each shoe before putting them on.—A. M. H.

Baltimore and New York are for the present the two largest ports for shipment of corn. New Orleans comes third.

Insist on Protected Food.

Farmers as well as others are consumers of all kinds of food products in the cities. Through food and drink entering into the stomach typhoid fever and other diseases are spread. Many a visitor from the farm has eaten in the cities food that has sent him home to a bed of sickness. Residents in the cities that have thought much on the matter have long since stopped buying certain foods in the cities. Every farmer and every resident of the farm going to a city should be careful to eat only food that has been protected from disease germs.

If candy is to be purchased, it should be in stores where the candy is protected by glass cases. There are multitudes of candy stands in the cities where all the candy is exposed to the free air at all times. It is a wonder that any person has the stomach to eat candy so exposed.

More than once the writer has seen the street sweepers stirring up the dust, which the wind carried to everything in the vicinity, dropping it in layers on the candy, figs, dates and fruit exposed on the stands. That dust was laden with germs of diesase from the spittle of consumptives and from the exuded matters from the nostrils of the thousands that throng the city streets. Some day we will be so civilized that the city authorities will prevent the exposure in the public street of all kinds of edibles. But in the meantime the food in question should be avoided by every visitor to the cities. We will never get protective laws till we have first created a sound public sentiment on this matter.

One of the most surprising things is the making of candy in public places. In some of our cities the food inspectors have raided factories where the conditions for making candy were not satisfactory, yet the making of candy in public places is not prohibited. In different stores in Chicago may be seen the great metal arms turning over and over, working the thick skeins of molasses candy. The throngs fill the stores, coughing, spitting, sneezing and filling the air with germs of all kinds. The air is as constantly carrying these germs onto the molasses candy being worked, and millions of them are incorporated into every batch of candy, to say nothing of the dust from the street blown in through the open doors. Such candy should never be purchased, and its sale to anyone ought to be prohibited.

The public is just beginning to demand sanitary food, and the dealers are slowly responding. Here and there a butcher shop is putting in glass cases, in which cold air, from refrigerators, helps keep the meat, while the breath of the customers and their fingers cannot touch the meat. A few grocers are beginning to sell everything in sealed packages, where the food is reasonably protected from dirt. It is a movement that should be fostered in every way.

In restaurants there is too much exposure of food. The cafeterias, which now spread out large quantities of food exposed to every dust-laden draft, could at small cost protect their food under glass cases. Public sentiment could compel them to do this, and the visitors from the country should do their part in bringing it about.

To Benefit the Trusts.

In his speech condemning the bogus reciprocity bill, Senator Coe I. Crawford, of South Dakota, said:

"During forty-six years the modern monopolistic trust has come into our commercial life. It has crushed out competition and will appropriate all the benefits that can flow from this law if it is enacted in its present form. No relief will come to the ultimate consumer. It will depress American agriculture and intensify the congestion of our population in great cities. The opposite course should be taken.

"With profitable return for the labor and intellect bestowed the calling of the farmer becomes dignified as well as independent. But all depends upon its yielding him a fair profit. Unless it does that his sons yield to the lure of the city. We are at the parting of the ways. The policy of the government is now to be definitely determined. The issues are momentous.

"If this is to be henceforth an urban nation like England, where 26,000,000 of her 38,000,000 people live on imported wheat and 13,000,000 live on imported meat, which, put in other words, means, as Mr. Mallock tells us, that her whole population lives on imported meat for nearly five months of the year and on imported wheat for eight months of the year—if we are ready to admit this is to be our destiny in the United States and that we shall ransack the world for our food and not depend upon the American farms for it, then I say agriculture will go down in this country and with it will begin the permanent decay of our civilization.

"And if we have decided to maintain a protective tariff upon manufactured products, while exposing the products of our farms to free trade with the greatest world competitors, our conduct is the strongest possible admission that we have reached that melancholy conclusion. I protest against it, because in my opinion it is a cowardly abandonment of a grave duty and obligation we owe to the future as well as to ourselves.

"These great cities, these vast railroads, these enormous combinations of wealth, these stock and commission gamblers, will not remain long when the American farmer gives up the fight. How, then, can we make so fundamental a change in our policy toward the farmer with such seeming indifference? How do we dare do it when it is clear the trusts, and the trusts only, will profit by the change?"

The Price She Paid.

A young girl about fifteen years old recently died in our neighborhood. She was a beautiful girl and had in her the promise of a brilliant womanhood. Because it was easy for her to learn she aimed to be the leader in her class at school, and this position she held for years. But as she advanced in her studies they became harder and then at that delicate period in a young girl's life when burdens should be placed so lightly upon her, she gave way beneath the strain. Her parents, who had been so proud of her high school standing and her musical ability, stood aghast as the physician said, perhaps heartlessly: "Too much study and too little play for a girl of her age." Class leadership and star piano performances are all very well in their way, but how do they compare with the health, even the life of a young girl? If only these growing girls have in them enough of the healthy young animal so that they will romp about in the fresh air for a while every day, they will most likely have such good appetites and such well-balanced nerves that an occasional failure in a class recitation will be no heart-breaking, tear-inspiring affair to them, and they can safely enough stand the school work, providing it is chiefly school work and not a mass of home work to be recited in school.—Janet Thomas Van Osdel.

Good Jewelers Everywhere Endorse Our Campaign for Reliable Watch Cases

TRADE MARK
CRESCENT
GOLD FILLED
Reg. U. S. Pat. Off.

TRADE MARK
JAS. BOSS
GOLD FILLED
Reg. U. S. Pat. Off.

Of all merchants the jeweler is most dependent on a reputation for integrity. He sells upon honor. He is held responsible for the quality of his goods.

That is why good jewelers everywhere are writing us and pledging their hearty support in our campaign for "legitimate gold-filled" watch cases and our fight on spurious "guarantees."

Our Crescent and Jas. Boss gold-filled cases are standard with the fine jewelry trade and have been for fifty years.

Look for our trade marks when you buy. They insure the quality you pay for, the thickness of the gold, the depth and richness of the design, and the service you have a right to expect.

The Keystone Watch Case Co.
Established 1853
Philadelphia

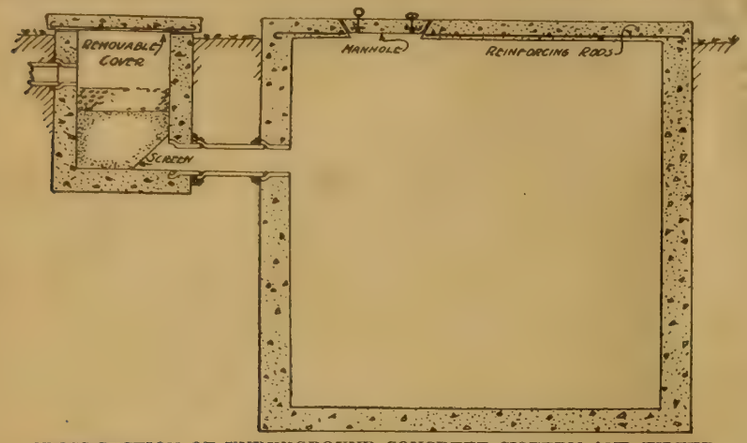
Wisconsin Live Stock.

The Census Bureau reports that in 1910 the state of Wisconsin had on farms 2,678,160 cattle, 1,809,331 hogs, 929,783 sheep, 2,666 goats, 614,654 horses, 2,872 mules and 176 asses. Compared with the census of ten years ago, Wisconsin has increased in cattle 364,055 head, and in horses 58,898 head. The cattle increase is all in dairy cows. To offset the increase as stated there is is a decrease amounting to 205,300 hogs, 745,670 sheep, 1,226 goats, 1,618 mules and 232 asses. The decrease in sheep is remarkable. In 1900 there were 689,241 lambs and 986,212 grown sheep, whereas in 1910 there were 301,244 lambs and 628,539 grown sheep.

UNDERGROUND CISTERNS OF CONCRETE.

How to Build Cisterns and Filters.

From the viewpoint of the intelligent housekeeper, there are few things more important than an abundant supply of soft water. In the kitchen, laundry and bath-room it means lightening of labor and economy. The ideal soft water is rain water, and the old-time rain barrel, so long an institution in this country, is still extant in some rural districts. It is the purpose here to discuss the ideal "rain barrel," a reservoir unlimited in capacity that may be made indestructible and impervious for all time, something cheap as to first cost and never needing repairs. The perfect reservoir is the underground cistern of concrete.



CROSS-SECTION OF UNDERGROUND CONCRETE CISTERN AND FILTER.

The first underground cisterns were always prone to leak. In wet weather the ground water seeped in and transformed the soft water into water as hard as that from the well. In dry weather such cisterns were empty. By means of concrete property owners are now able to build their own cisterns that are jointless, watertight and large enough to store an abundance of soft water even in the dryest season.

PUMP SET ON CONCRETE CISTERN PLATFORM.

Concrete cisterns usually consist of two general types—underground and surface cisterns. The choice is dependent upon the amount of space available in the yard. Cisterns on top of the ground will be treated in a later issue.

Construction of Underground Cistern.

Underground cisterns may be built in any shape desired. For the same amount of concrete, round cisterns (with a depth equal to the diameter) will hold the most water. However, since round forms are not easy to frame, most cisterns are made square. To illustrate the usual method of building, consider the construction of a cistern eight by eight by eight feet in the clear, with walls eight inches thick and with a capacity of 121 barrels. Before beginning the work, have all the materials on hand, slightly more than required.

Locate the cistern in the most convenient place. Since the walls are eight inches thick, lay out the hole nine feet four inches square. The concrete bottom is six inches thick. Therefore dig the pit to the depth of eight feet six inches. Since the concrete cover or platform will be five inches thick, the top of the cistern will be five inches above the ground, which is a desirable feature.

If the earth walls stand firm, only an inside form will be needed; otherwise make a similar form for the outside of the walls. This form should be built (each side separately) previous to digging the pit, so that it may be quickly erected and the cistern finished before a possible shower makes the hole muddy. For siding, use one-inch boards on two-by-four-inch uprights spaced two feet. As soon as the hole is dug, set up the forms on six-inch cubes or bricks of concrete with one-inch removable wedges between the forms and the bricks. The side wall forms will later support the platform on which the concrete cover will be built; and unless these wedges are used, the forms will bind and be difficult to remove. Join the forms at the corners so that they can be easily taken down after the cistern is finished. Against the earthen walls, and braced to the inside forms, set one-inch boards, twelve inches wide, so as to prevent dirt from crumbling and falling into the cistern.

Mix the concrete one part Portland cement to two parts sand to four parts crushed rock. In measuring the quantities, consider one bag of cement equal to one cubic foot. If gravel is to be used, proportion the concrete one part cement to four parts clean gravel. For the floor have the concrete just wet enough to flush a little cement mortar to the surface when tamped into place. See that there is an abundance of mortar around the concrete blocks supporting the forms. Immediately begin filling the side wall forms with concrete mixed mushy wet and placed in eight to ten-inch layers around the entire cistern. Be careful not to shovel the concrete against the earthen sides, as dirt in concrete is liable to make a leaky wall. Do not stop until the forms are filled. At the proper points, insert an overflow opening (if desired) and a sewer pipe connection for the water from the down spout or the filter and the pipe connection for the pump in the house. This pipe should be carried three to four feet under ground, out of danger of freezing.

To keep out mice, vermin, scrub-

SisterWoman!

READ MY FREE OFFER

My Mission is to make sick women well, and I want to send you, your daughter, your sister, your mother, or any ailing friend, a full 50-cent box of Balm of Figs Compound absolutely free. It is a remedy for the treatment of woman's ailments, and I want to tell you all about it—just how to use it yourself—right at home without any inconvenience—and the best of it is that it will not in the least interfere with your work or pleasure. Balm of Figs Compound is a remedy that has made sick women well and weak women strong, and I can prove it—let me prove it to you, and I will gladly do it, for I have never heard of anything that has, according to the abundance of testimonials at hand, so quickly and surely cured women's ailments. No internal dosing necessary—it is a local treatment, yet it has to its credit some of the most extraordinary cures on record. Therefore I want to place it in the hands of every woman suffering with any form of female weakness or diseases so common to women.

This 50c box of Balm of Figs Compound will not cost you one cent

I will send it to you absolutely free, to prove to you its splendid qualities, and then if you wish to continue further, it will cost you only a few cents a week. I do not believe there is another remedy equal to Balm of Figs Compound, and I am willing to prove my faith by sending out these 50-cent boxes free. So, dear reader, irrespective of your past experience, write to me at once — today — and I will send you the treatment entirely free by return mail, and if you so desire, I can readily refer you to many, who can personally testify to the great and lasting cures that have resulted from the use of this remedy. But after all, the very best test of anything is a personal trial of it, and I know a 50-cent box of Balm of Figs Comcound will convince you of its merits. Nothing is so convincing as the actual test of the article itself. Will you give Balm of Figs Compound this test? Write to me today, and remember I will gladly send you a 50-cent box of this remedy absolutely free. Address,

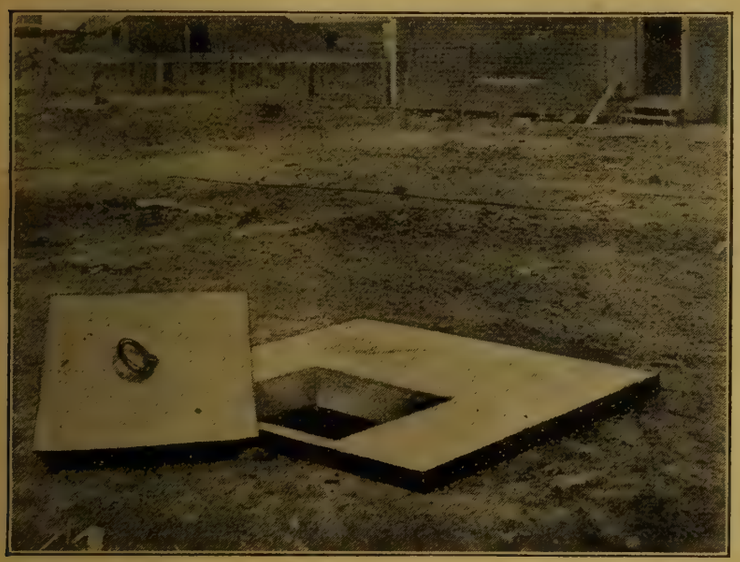
water or filth, every cistern should be covered with a concrete platform reinforced with steel rods. After the concrete walls have been brought to ground level, set a wooden frame around the outside of the cistern so as to hold the concrete for the five-inch platform. To run water off the finished cistern cover, slope this frame one inch in the direction desired. Five inches below the finished top of the cistern cover construct a strong wooden platform of one-inch boards for flooring. Build this on two-by-four-inch joists nailed to the uprights of the side forms. This wooden platform will support the concrete cover until it is self-sustaining. To provide for a manhole opening, take one-inch boards six inches wide and build a bottomless box five inches deep, two feet square at the top and eighteen inches square at the bottom—outside measurements. Another plan is to have the tinsmith make a round bottomless tin form five inches deep, two feet in diameter at the top and eighteen inches at the bottom, after the pattern of a large dish pan without a bottom. Grease the manhole frame and set it on the platform where the opening to the cistern is desired. An iron manhole frame and hitching-post ring, the end provided with a knob of twisted wire or with a nut and large washer for holding it firmly in the concrete. If the wooden manhole form is used, carefully remove it after five hours. After three days build the manhole cover the same as for the tin form, with this exception—place greased paper or card-board around the edge of the opening to prevent the new concrete from sticking to that of the platform. To make the manhole cover lighter in weight, before placing the concrete, spread one and one-half inches of wet sand over the wooden platform in the manhole opening and then tamp in the concrete. Take care to place the reinforcing within one inch of the bottom of the manhole cover. When the cistern platform is two weeks old, remove the manhole cover and saw an opening in the wooden floor. Descend, knock out the one-inch wedges under the side-wall forms, take the forms apart and pass them out through the manhole opening.

It is generally advisable to filter rain water. For this purpose provide a filter on the outside of the cistern proper. Construct this filter in the same way as the cistern was built except that the reinforced concrete cover should be loose, so that it can



CONCRETE CISTERN PLATFORM WITH MANHOLE COVER.

cover can also be used. By a similar use of a section of a gas pipe or small drain tile, leave an opening for the pump stock, if an out-door pump is to be used. Around this opening in the soft concrete place bolts (washered) for the pump. To locate the bolts correctly, set them by means of a wooden block in which holes have been bored spaced exactly like those in the iron pump base.

Over the entire platform spread one inch of concrete. For reinforcing quickly place on this concrete ten-foot lengths of three-eighths-inch iron rods running in both directions (criss-cross) and spaced one foot apart. Bend the ends to a hook shape. Strengthen the platform around the manhole opening by placing two rods on each side. Bring the cover to its full thickness by immediately tamping in the remaining four inches of concrete. Finish the surface with a wooden float (a trowel) the same as for sidewalks. If the tin form is used, the manhole cover may be cast at the same time as the remainder of the floor. Reinforce the cover with short length of iron rods laid criss-cross. As a lifting ring for the cover, use half of an old bridle bit or a be removed. Therefore, mold it on a smooth surface, such as a wooden floor, and later put it in place. Make the concrete walls and bottom six inches and the cover four inches thick. Under most conditions a filter two feet square and three feet deep in the clear is large enough. Carry the walls a few inches above the surrounding ground. At the filter floor level connect the filter with the cistern by means of a six to eight-inch sewer pipe or drain tile laid with carefully cemented mortar joints. Likewise, one foot from the top, lay a similar connection for the pipe leading to the down spout. Instead of using a square inside form for the filter, a barrel may be used. In the filter place a galvanized screen of one-fourth-inch mesh over the pipe opening to the cistern. Fill in eighteen inches of coarse charcoal. Cover the charcoal with six inches of sand and gravel. Place the slab cover on the filter, and the cistern is ready for use.

Above is given the amount of materials required for the cistern and filter. Since the prices given are liberal, by getting quotations from local dealers, the cost of the cistern may be found to be less.

The cost estimate is as follows:

Crushed rock, eleven cubic yards, at $1.10	$12.10
Sand, five and one-half cubic yards, at $1.00	5.50
Portland cement, eighteen barrels, at $2.50	45.00
Reinforcement (18⅜-inch by 10-foot rods, 93 pounds, at $0.02¼	2.10
Total	$64.70

No estimate of the labor is given, as the suburban or country dweller can easily build his own cistern with ordinary farm labor.

THE BEST COOK BOOK.

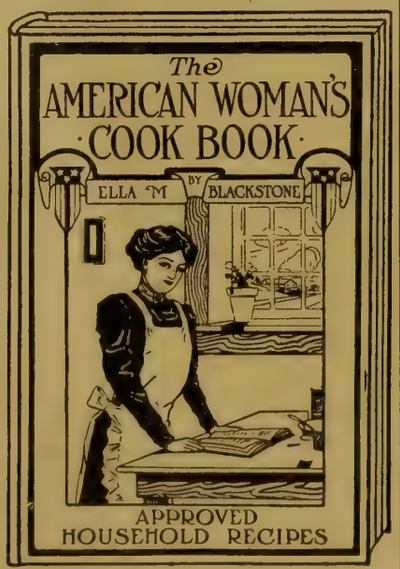
The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to foods for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen don'ts; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice creams and ices; also ruled pages for new recipes to be preserved.

The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index,



which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar, and include one-year's subscription to The National Farmer and Stock Grower. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Nugents' Fashion Booklet.

We hope our lady farmers will interest themselves by answering the advertisement of B. Nugent & Bro., of St. Louis, Mo. This is a splendid house, fully up to date, and keep a stock of the nicest goods. A copy of their Summer Bargain Bulletin belongs to you. All you have to do is to send for it. Address, Nugents Dry Goods Co., 503 North Broadway, St. Louis, Mo.

Blood Poison
30-Day Treatment FREE

Remarkable Results Produced By New Vegetable Treatment Without Use Of Mercury or Potash.

The terrible results of mercury and potash on blood poison are well known. The most these drugs can do is to drive the blood poison back into the system and smother it for several years. Then when you think you are cured, pitiful mercury symptoms often break out, and you find that your bones have been rotting all the while. Your teeth may begin to loosen and your tissues, glands, brain and vital organs show the terrible destructive power of the mercury and potash. Locomotor Ataxia, Paralysis, Imbecility and Premature Death are then almost inevitable. Medical authorities admit that this is so.

The remarkable new treatment, called the Obbac Treatment, is purely vegetable, containing positively no mineral poison whatever, no mercury, potash, narcotics or opiates. It has produced remarkable changes in only 30 days. Treat yourself privately at home, and become as free from taint as a new-born child.

The wonderful Wasserman Test, the only blood poison test known to scientists, has proven that a man has been completely purified by the Obbac Treatment.

Don't spend months and years of your precious life, and destroy your health forever by taking mercury and potash which doctors commonly prescribe. Write today. Send your name and address and complete description of your case to the Obbac Co., 1198 Obbac Bldg., Chicago, and they will send you at once in an absolutely plain, firmly sealed package, a full 30-day treatment absolutely free.

TAPE-WORM Expelled alive in 60 minutes with HEAD or no charge. No fasting, no sickness, no pain. Medicine pleasant and perfectly harmless. Medicine sent to any part of the country. Large booklet containing valuable information FREE.

Tobacco Habit Banished

DR. ELDERS' TOBACCO BOON BANISHES all forms of Tobacco Habit in 72 to 120 hours. A positive, quick and permanent relief. Easy to take. No craving for Tobacco after the first dose. One to three boxes for all ordinary cases. We guarantee results in every case or refund money. Send for our free booklet giving full information. Elders' Sanatarium, Dept. 86, St. Joseph, Mo

EXPERIENCE IN CANADA.

He Had $400.00 in Cash in 1903; Now Worth $8,000.00.

My parents were originally Canadians from Essex county, Ontario. I was born in Munroe county, Michigan, from which place I moved to Red Lake Falls, Minnesota, where I farmed for twenty-two years. I sold my farm there in the summer of 1903 and in September of that year came to Canada with my wife and eight children. I had about $400 in cash, a team of horses, a cow, a few sheep and some chickens. I took up a quarter section of land near Jack Fish Lake, Meota P. O., and later on purchased for $2,000.00 an adjoining quarter section. I have now forty-eight head of cattle, a number of horses, good buildings and consider my holding is worth at least $8,000.00. My children have raised from $300 to $500 worth of garden truck each year since we have been here. I have never had a poor crop and have never had one frosted. My wheat has averaged from twenty-five to thirty bushels per acre with one or two years considerably more. My oats have always yielded well up to fifty bushels per acre and once or twice as high as eighty-five. My cattle have never been stabled in winter, and do not need it. I consider that this country offers better opportunities for settlers than anywhere I have ever been. I am sure that almost any person can come here and buy land at say $15.00 per acre and pay for it in one crop. My experience is that if a man farms his land in the right way he is not likely to have his crop frosted.

Most of the settlers in my district are Americans and Canadians and I know lots of them who came here with little or no capital who are now doing well, but I do not know of any who have left through disappointment, or, becoming discouraged, have returned to their former homes.

EUGENE JUBINVILLE.

See advertisement of Canadian Lands on page 12.

Russian Stump Pulling.

The Czar of Russia has lately shown a great interest in an American stump-pulling machine furnished by the Hercules Manufacturing Company of Centerville, Iowa, and which the Russian Minister of Forestry has established on the Imperial estate of "Orlovka," near Catschino, in Northern Russia.

"Orlovka" is a favorite resort of the Imperial family, the Czarina, especially, finding great interest and relaxation in the reclaiming of the acres of virgin forests it contains and the planning and laying out of model farms and modern parks. The latter particularly has always especially appealed to the Czarina's love for English landscape.

The work, however, has gone on very slowly for the reason that only hand labor could be employed in the uprooting of the many giant stumps that encumbered the estate, for the use of dynamite or any explosive is strictly forbidden on any part of the Imperial domain. This necessary concession to the Czarina's bad state of nerves (and she insists that the rule be obeyed, although she may be a day's journey from the spot where the work is being carried on) has complicated the task of the Minister of Forestry until his attention was called to the American Stump Puller. He tried one of these and the success of the experiment was so complete that the Forestry Department of the Russian Government has ordered from the Hercules Manufacturing Company twenty-two more of the Hercules Triple Power Steel Pullers to be employed on government land, basing this decision on the fact that not only do these machines do away with explosives, but work quicker, better, cheaper and with perfect safety.

Both the Czar and Czarina have visited the site of these machines and watched their operations with great interest. Their approval will probably mean general acceptance of them throughout Russia and another European triumph for American agricultural machines. For catalogue of the Triple Power Stump Puller address Hercules Manufacturing Company, 140 17th street, Centerville, Iowa.

Food For the Indoor Worker.

A different kind of food is required by indoor workers—those who sit at desks and get little exercise—from the rich, heavy foods that can be eaten with comparative safety by people who are constantly on the go out of doors.

The digestions of indoor workers usually are impaired—after lunch they suffer especially.

Such persons will find that if they will quite often eat the Graham Crackers baked by the National Biscuit Company their digestions and appetites will be helped wonderfully.

Graham Crackers are the most delicious food baked from Graham flour. And Graham flour contains all the nutriment of the wheat and has the virtue of stimulating the digestion as well.

The Graham Crackers baked by the National Biscuit Company have a different taste from the old-fashioned kinds. They have a toothsome, nut-like flavor, and are so made by perfected processes that all the natural sweetness and healthfulness of the wheat is preserved. They are packed in moisture- and dust-proof packages, bearing their In-er-Seal Trade-Mark.

Tom Johnson's Favorite.

"The papers are full of Tom Johnson anecdotes, now that the old man's gone," sighed former Vice-Mayor Lapp, recently. "Of course I could tell a million, only I don't feel like it right now. I call to mind, though, that Tom came into the office years ago chuckling over something he had found in some country newspaper, 'way down South. He carried the clipping with him for months and used to read it to his friends. I don't remember it, word for word, but this is the gist of it:

" 'Some of our colored brethren are going to get into serious trouble if they are not more careful. Last week two prosperous colored farmers went to sleep on the railroad track just east of our village and were struck by the fast freight. The engine narrowly escaped being thrown down the embankment. These farmers got up and ran away, but their names are known, and as they both own property, the road will probably sue for damages. The law recognizes that there is such a thing as criminal carelessness, and the sooner people recognize it, too, the better it will be for all concerned.' "—Cleveland Plain Dealer.

Great Expectations.

"Where are you going with that goat, little boy?"

"Down to the lake. Come along if you wanter see some fun. This here goat has jest et a crate of sponges, an' I'm goin' down an' let him drink."—Toledo Blade.

MUTUAL CARRIAGE & HARNESS MFG. CO., Dept. 47, East St. Louis, Ill.

The De Laval Separator Works at Poughkeepsie, N. Y.

We are indebted to the De Laval Separator Company for the accompanying new cut of their General American Works at Poughkeepsie, N. Y., which will be of interest to the many of our readers who are users of De Laval Cream Separators.

The sketch is new because of large additions having been made to the plant during the past year and just recently completed, though for that matter the apparently ever increasing demand for their machines compels the De Laval people to make some addition to their shops every year, and we understand they will make still another the coming summer.

It is difficult to gain an adequate conception of the magnitude of the plant from the picture because of the necessary reduction of it, and this is better realized when it is understood that the building line on the water front is over one-quarter mile in length. The machine shop buildings are mainly of the saw-tooth, glass-roof type, the original part of them having been the first in this country of that ideal kind of shop construction.

The De Laval shops were several years ago estimated by so high an authority as the American Machinist to be perhaps the finest in America, and they have at least kept pace with the mechanical development of other shops since that time.

The equipment throughout is of the most modern and progressive character. Everything possible is done automatically and many of the tools have been specially designed and built by the Company's own engineers. This is true, for instance, of the gear cutters, the gears of the De Laval machines to-day being different from any other gears in use for any purpose and their unusually smooth, easy running thus assured.

The location of the plant at Poughkeepsie is seventy-five miles north of New York City, midway of New York and Albany, and, as will be observed, the site lies between the Hudson River and the main line of the New York Central Railway, affording in this way the advantage of both rail and water transportation for incoming and outgoing freights under the most favorable conditions.

In addition to their general American Works at Poughkeepsie the De Laval Company has Canadian shops in Montreal, while they maintain repair shops in Chicago, Winnipeg and San Francisco for the service of their nearly 1,500,000 patrons. Abroad their main European plant is in Stockholm, Sweden, while there are large manufacturing shops as well in Copenhagen, Hamburg, Berlin, Vienna and St. Petersburg, and repair shops in practically every country the world over.

BIRD'S-EYE VIEW OF THE DE LAVAL SEPARATOR WORKS.

A PROFITABLE INVESTMENT

Republic Ornamental Fence will enhance the value of your property.

Republic Ornamental FENCES are made by cabling large heavily galvanized wires and in setting heavy upright wire pickets, corrugated only at point of intersection; thus forming an immovable joint without injuring the galvanized coating. Most durable fence made. A variety of beautiful designs. May be erected with wood or iron posts. Write for catalog. If you need Farm Gates, write for Special Farm Gate Catalog.

PROF. SAMUELS ORIGINATES PECULIAR METHOD OF TREATMENT

HIS PHENOMENAL SUCCESS CAUSES ENMITY OF DOCTORS

ARRESTED MANY TIMES

But Acquitted by Juries and Judges and Permitted to Continue in a Work That He Alone Can Do, as He Is the Only Man in the World Using His System—Patients Make Startling Statements of His Successful Method of Treating Consumption, Bright's Disease, Kidney Trouble, Blindness, Fits, Catarrh, Heart Disease, Cataracts, Nervous Prostration, Dropsy, Hay Fever and Many Other Diseases That Baffle the Skill of the Ordinary Physician.

WICHITA, Kas.—The almost miraculous cure of hopeless invalids made by Professor Samuels of Wichita, Kas., have been of such a startling character that they have aroused wide-spread wonder, admiration and curiosity. Time and again he has taken cases pronounced hopelessly incurable by the medical profession and restored the patients to health in a most phenomenal manner.

There is considerable mystery attached to Professor Samuels' method of accomplishing these marvels, and it is known that he does not use the drastic drugs and medicines that doctors depend upon. And it is a matter of proof that with the system this discovery gives him, he has made the blind see and the lame walk. He has revived the flickering spark of life in bodies on the very verge of the grave, and restored to health men and women given up to die by doctors and specialists.

Professor Samuels came into note several years ago by his almost miraculous cure of "Blind Joe," of Topeka, Kas., who was well known in that city, having sold peanuts and popcorn on the streets there for years. He had been blind for ten years, and had exhausted all the means in his power to be cured, but had given up in despair until he fell into the hands of Professor Samuels, who effected a cure.

Professor Samuels has been arrested many times for practicing his system without having a diploma. On being interviewed a few days ago relative to his many arrests, Professor Samuels said:

"Yes, I have been arrested many times for practicing without a license, but in no case have I been convicted. Naturally, the medical profession are jealous of my success, and are fighting me most of the time, but how are they going to convict me? Do you suppose any jury, when my patients come into court, as they did at Alva, Okla., Newkirk, Okla., Ponca City, Okla., and other towns, and tell how they have been cured of all manner of trouble, do you suppose for a minute that any jury hearing these people and seeing with their own eyes what has been accomplished, is going to convict me? My trial at Alva was before a very able judge, Jesse J. Dunn, who is now Chief Justice of the state of Oklahoma; after hearing the evidence for and against me I was acquitted. At Newkirk I was tried before Judge Hausley, a very able judge. Judge Brown, a noted lawyer, was the prosecuting attorney, and fought the case very hard, but I was acquitted. These persecutions were brought because I have no license. Being the originator and only practitioner of my system of healing, how am I to have a diploma? I can't issue it to myself, and the medical fraternity, trotting along in the same harness for half a century, too blind to accept my discovery, which accomplishes actual results, make it impossible for me to procure a license as a representative of any of the recognized schools. So what am I to do but to proceed in my own way and accomplish results that astound humanity?

The professor here showed a reprint from the court records showing the proof of his assertions that the court had not convicted him.

Professor Samuels is a remarkable man. Bright, alert, progressive, and although 60, he is straight and active and gives one the impression that he is much younger. He talks with such an earnest conviction and enthusiasm of his work that the listener must believe him and believe in his work.

"What is the nature of your treatment?" was the next question.

"That is a secret that has taken many years of my life to accomplish. I can only say that my results are obtained treating diseases by dropping a colorless liquid, which I prepare, into the eye. Strange as it may seem, so-called incurable cases of consumption, Bright's disease, dropsy, epileptic fits, nervous prostration are treated in this apparently miraculous way. My system is based absolutely on scientific principles. The eye is the window of the soul. I have evolved a system of treating other bodily ills based on the relation of the eye to the system as a whole. This may seem strange, but here are the proofs."

Thereupon the professor placed before his interviewer his "Message of Facts," affidavits and letters in great numbers, many of them from responsible and well-known people, all bearing on his statements.

The case of Mr. C. C. Miller, residing near Hutchinson, Kas., who for years had suffered untold agony from hemorrhage of the kidneys and various complications of that dire malady, is another example of the almost miraculous results of Professor Samuels' strange treatment. Mr. Miller in his testimonial states that he had tried every remedy suggested by his medical advisers without obtaining relief, and at last, hearing of Professor Samuels' wonderful cures, decided to take his treatment. At that time he was in a deplorably enfeebled and emaciated condition, weighing only 118 pounds, and was almost without hope. Six months after beginning the treatment he was absolutely restored to health, weighed 155 pounds, and has had no recurrence of his trouble. Mr. Miller has lived in the vicinity of Hutchinson since 1877, is a man of high integrity, and his endorsement of Professor Samuels' method of cure should be regarded as the strongest kind of proof of its merit and reliability. In fact, the greater number of the professor's patients are of a class whose testimony cannot be discounted, and perhaps this has been one of the main reasons why his fame has spread so rapidly and brought so many of the afflicted to his office for treatment.

Mr. George Hartman, living at 211 North Meridian street, Wichita, Kas., in his testimonial states he had what some physicians pronounced Bright's disease and others called it diabetes. Various doctors—among them his family physician—had given him up to die. He was so weak he could hardly walk. About this time he heard of Professor Samuels and placed himself in Professor Samuels' care, and showed change for the better in a few weeks. He states that at the end of ten months he felt just as well as he ever did, and claims he is absolutely cured and has never had a recurrence of the trouble.

Mrs. J. T. Williamson, who resides at 200 B street West, Hutchinson, Kas., in her testimonial states she was almost on the verge of the grave with consumption and nervous trouble, and that for nearly twenty-two years she was seriously afflicted with St. Vitus' dance in addition to tuberculosis. She states that a leading physician had pronounced her incurable, and that she would die and be buried with the falling of the leaves in autumn. As a last resort, she turned to Professor Samuels, and after starting his treatment she says she had only one hemorrhage of the lungs and began to improve. In a short time, she states, she was able to do her own work, and that she recently had her lungs examined by a doctor, who pronounced them absolutely sound and well.

Mrs. H. J. Burroughs; living at Collins, Ia., and who in her testimonial said she had a serious case of heart trouble, in a recent letter to Professor Samuels states: "I have not taken a drop of medicine since I began your treatment. Before that I had to take from one to four heart tablets a day. I had dizzy, blind spells, and my heart did not beat regularly at all, but just flutter. Now it beats regularly and does not bother me a bit. I tell everyone I talk with of your treatment and what it has done for me."

Mr. C. W. Neel, living at Broken Arrow, Okla., in his testimonial says he had a very bad case of rheumatism. Writing Professor Samuels in a recent letter he states as follows: "Thank you, Professor, ten thousand times for your assistance in curing me of that awful rheumatism. I am still hard at work and feeling fine."

Miss Daisy Hubbard, who lives at Alva, Okla., in a recent letter wrote: "For fifteen years I have been subject to epilepsy, and have received treatment from several noted doctors and have failed to receive permanent good." As a last resort she began treatment from Professor Samuels, and now in her testimonial says she has no symptoms of the disease.

Mrs. Louisa Lockhart, living at Washington, Kas., in her testimonial says she had a very bad case of kidney and bladder trouble. She had reached the point where her kidneys and bladder were in an awful condition. In a recent letter to Professor Samuels she states: "After taking your treatment two weeks I was able to do my own housework, which I had not done for months. I took the treatment one month and now I am well in every respect, thanks to your wonderful treatment."

"Is it necessary for your patients to come to see you to be treated?" was asked. "No, my treatment can be sent by mail. Many of my patients come to see me, but it is not always necessary. My treatment is sent to hundreds, and, in fact, I am as successful in treating that way as though the patients were right here. To people from a distance who write me, an information blank is sent to fill out. In this way I am enabled to send them the treatment with full directions for its use."

"I should think with your ability to cure you would be in a position to demand big money from your patients," remarked the interviewer. "No, I do not do that now. My charges, when the patients used to call on me in person, used to be pretty high. I am getting old, and I feel that it is my duty in my last years to place my treatment in the hands of the poor as well as the rich. I believe that I owe a duty to mankind, and that as many people as possible, no matter what race or nationality, nor where located, should be benefited by my life's work. On this account, I have reduced my charges so they are within reach of all.

"My greatest aim in life from now on will be to relieve the ills of humanity, and when death shall claim me, I have arranged so that my secret will not die with me, but will be known, so that men in all ages to come will reap the reward of my life's work."

Everyone who is sick, no matter what their troubles may be, should write Professor Samuels, room 110, Samuels Bldg., Wichita, Kas., for his "Message of Facts," and they will find something in it of interest to them.

Top Kansas City Sheep Market.

Following are a few sales made at Kansas City during the third week in May: For George Newman, Yavapai county, Ariz., 706 spring lambs, averaging 65 pounds, at $6.25 per 100 pounds; 367 ewes, averaging 99 pounds, at $4.10, the highest range ewes this season; also 214 yearlings, averaging 96 pounds, at $4.60, top for yearlings of that weight. For J. A. Pitts, Pinal county, Ariz., 464 wethers, averaging 98 pounds, at $4.40. For J. A. Rourke, Prowers county, Colo., 542 clipped lambs, averaging 66 pounds, at $5.50. All these sales were at extreme top prices when sold and were handled to the best possible advantage by Clay, Robinson & Co.

Too Old to Learn.

He—"But couldn't you learn to love me, Anna?"

She—"I don't think I could, Harry."

He (reaching for his hat)—"It is as I feared—you are too old to learn."—Harper's Bazar.

Religious Sense of Duty.

City Visitor (to farmer)—"Do you keep good hens?"

Farmer—"I should say I do. Some of them say: 'Now I lay me' twice a day."—Life.

FREE TO YOU—MY SISTER

Free to You and Every Sister Suffering from Woman's Ailments.

I am a woman.
I know woman's sufferings.
I have found the cure.

I will mail, free of any charge, my home treatment with full instructions to any sufferer from woman's ailments. I want to tell all women about this cure—you, my reader, for yourself, your daughter, your mother, or your sister. I want to tell you how to cure yourselves at home without the help of a doctor. Men cannot understand women's sufferings. What we women know from experience, we know better than any doctor. I know that my home treatment is a safe and sure cure for Leucorrhoea or Whitish discharges, Ulceration, Displacement or Falling of the Womb, Profuse, Scanty or Painful Periods, Uterine or Ovarian Tumors or Growths; also pains in the head, back and bowels, bearing down feelings, nervousnnss, creeping feeling up the spine, melancholy, desire to cry, hot flashes, weariness, kidney and bladder troubles where caused by weaknesses peculiar to our sex.

I want to send you a complete ten day's treatment entirely free to prove to you that you can cure yourself at home, easily, quickly and surely. Remember, that it will cost you nothing to give the treatment a complete trial; and if you should wish to continue, it will cost you only about 12 cents a week, or less than two cents a day. It will not interfere with your work or occupation. Just send me your name and address, tell me how you suffer if you wish, and I will send you the treatment for your case, entirely free, in plain wrapper, by return mail. I will also send you free of cost, my book—"WOMAN'S OWN MEDICAL ADVISER" with explanatory illustrations showing why women suffer, and how they can easily cure themselves at home. Every woman should have it, and learn to think for herself. Then when the doctor says—"You must have an operation," you can decide for yourself. Thousands of women have cured themselves with my home remedy. It cures all, old or young. To Mothers of Daughters, I will explain a simple home treatment which speedily and effectually cures Leucorrhoea, Green Sickness and Painful or Irregular Menstruation in Young Ladies. Plumpness and health always results from its use.

Wherever you live, I can refer you to ladies of your own locality who know and will gladly tell any sufferer that this Home Treatment really cures all women's diseases, and makes women well, strong, plump and robust. Just send me your address, and the free ten day's treatment is yours, also the book. Write today, as you may not see this offer again. Address

MRS. M. SUMMERS, Box H. • • • Notre Dame, Ind., U. S. A.

No. 7012.—Two-flounce Skirt for misses and small women. Fourteen, sixteen and eighteen years.

High-grade Dress Goods Obtainable at Small Cost.

We often hear remarks about how hard it is to obtain manufactured goods of the same enduring high quality which could be had in years past, and that the cheaply-made materials of to-day are really far more expensive and not nearly so satisfactory or serviceable as the "good old-fashioned kind."

While it is to some extent true that the quick manufacture of goods on a tremendous scale and the desire to meet the demand for low-priced articles has led to a decline in the quality of workmanship and material in many lines of goods, it is, however, still possible to procure reliable goods of the highest quality, which, though considered the best years ago, have steadily improved in quality until to-day they are far superior to the same articles of a generation or so ago.

As an example of the surprising development in modern manufacture and the steadfast adherence to the highest ideas of business perfection, we point to the well-known Simpson-Eddystone Prints, which for sixty-eight years have been acknowledged as the standard of excellence for durable cotton dress goods.

Since the manufacture of these dress goods was started by the elder Wm. Simpson, in the year 1842, the facilities and methods of manufacture have increased greatly, and the quality of Simpson-Eddystone Prints steadily keeps pace with the times, both in the matter of cloth, coloring and the originating of stylish and new designs.

These dress goods can be had in a good variety of exclusive designs and beautiful colors which cannot be duplicated in common material because they are originated by the company and used exclusively for Simpson-Eddystone Prints.

The wonderful process of producing fadeless colors in the manufacture of these goods gives them a remarkable richness and lustrous appearance which is not affected either by exposure or repeated washing.

Because of their serviceability they are really the most economical cotton dress goods a woman can wear, and it is good to know that such dependable material can be readily procured at a moderate cost at the leading dry goods stores throughout the country.

All Wives Are Like the Ivy.

Ex-Gov. Pennypacker, in a witty address in Philadelphia on the divorce evil, said of wives:

"A good wife is like ivy—the greater the ruin the closer she clings. And a bad wife is like ivy, too—for the closer she clings, the greater the ruin."

NAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Bulgarian Collars and Cuffs.

No. 580.—Design for embroidering a round collar and cuffs in Bulgarian style. The price of the pattern is 10 cents.

Three-inch Border.

No. 579.—Design for a border or band three inches wide, to be embroidered or beaded. Two yards are given. The price of the pattern is 10 cents.

Bulgarian Blouse.

No. 578.—Design for embroidering a blouse or waist in Bulgarian style. This is very attractive for summer wear. The price of the pattern is 10 cents.

Four-inch Border.

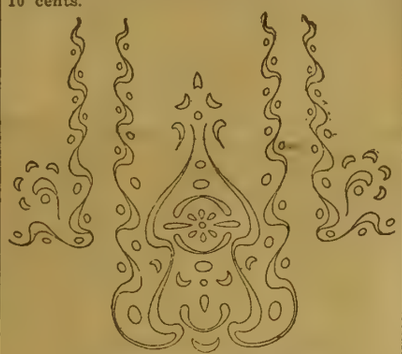
No. 577.—Design for an embroidered border four inches wide. Two yards and two corners are given. The price of the pattern is 10 cents.

Scalloped Edge With Dots.

No. 583.—Design for embroidering a scalloped edge with dots. The scallops are three-quarters of an inch in width and three-eighths of an inch in depth. Four yards and four corners are given. The price of the pattern is 10 cents.

Special Square-neck Effect.

No. 582.—Design for embroidering a blouse or waist in Bulgarian style. Transfer patterns for a square neck, pointed girdles and cuffs are given. The price of the pattern is 10 cents.



Panels For Skirt or Tunic.

Please send all orders for these embroidery patterns to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

COOK PORK WELL.

Danger of Trichinosis From Eating Raw or Imperfectly Cooked Pork.

Cases of illness sometimes occur from eating uncooked or insufficiently cooked pork which is infested with a microscopic parasite commonly known as trichina or flesh-worm, the scientific name being Trichinella spiralis. An average of one or two per cent. of the hogs slaughtered in the United States are infested with this parasite. When transmitted to human beings, trichinae may cause serious illness, sometimes resulting in death. Out of 15,000 cases of trichinosis recorded in medical literature, most of which occurred in Europe, 830 resulted fatally.

No method of inspection has yet been devised by which the presence or absence of trichinae in pork can be determined with certainty, and the government meat inspection does not include inspection for this parasite. All persons are accordingly warned by the United States Department of Agriculture not to eat pork, or sausage containing pork, whether or not it has been inspected by federal, state or municipal authorities, until after it has been properly cooked.

A temperature of about 160 degrees kills the parasite, therefore pork when properly cooked may be eaten without any danger of infection. Fresh pork should be cooked until it becomes white and is no longer red in color in all portions of the piece, at the center as well as near the surface. Dry-salted pork, pickled pork and smoked pork previously salted or pickled, providing the curing is thorough, are practically safe so far as trichinosis is concerned, but as the thoroughness of the curing is not always certain, such meat should also be cooked before it is eaten.

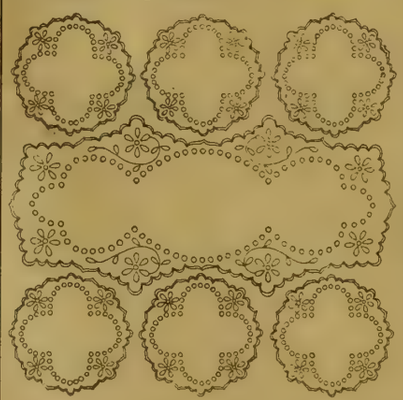
A pamphlet giving information on the subject may be obtained on application to the Secretary of Agriculture, Washington, D. C.

UNIVERSAL EMBROIDERY SET.

A Subscription Premium in Connection With the Universal Magazine.

The most beautiful of all trays and doilies are those which display a great deal of eyelet work; there is nothing more attractive on the dining room table than white linens embroidered in open work through which the polished wood may show.

The pretty Universal Embroidery Set illustrated below shows a dainty pattern that should be carried wholly in eyelets, both ovals and rounds. This set was made especially for us and consists of one large tray, size 8x17 inches; six doilies to match, size 5½x5½ inches, all stamped on fine white imported linen.



Send us Thirty Cents and we will send you this dainty set for a short time only, absolutely safe delivery guaranteed, and the Universal Magazine for one year. The Universal Magazine is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and has a number of original household articles. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Parliamentary Precedent.

A story told of Martin Regan had to do with the days of the old mob primary system in vogue in the politics of Kansas City in the early '80s. In the Sixth Ward of those days, much of the territory now known as "Little Italy," which in those days was largely inhabited by Irish, Martin's inveterate enemy was Jerry Dowd, who passed over many years ago. In one of the mob primaries in which Martin's nomination as Alderman was involved, the Regan faction was the more numerous in the mass-meeting at the old Tivoli Garden at Independence avenue and Oak street. Regan was elected Chairman, and after a short speech thanking the meeting for the honor "on behalf of my friends and myself," he proceeded to ask what was the further business of the meeting. Instantly Jerry Dowd was on his feet to protest against Regan's nomination.

"Sit down, Jerry Dowd," yelled Regan. "You are out of order."

"I am not," retorted Dowd, struggling with Regan partisans who were trying to force him down. Mr. Chairman, Mr. Chairman," he yelled. "I appeal from the decision of the chair."

"Sit down, Jerry Dowd, sit down," replied the Alderman. "It takes two-thirds to appeal from the decision of the chair and there's not that many here."—Kansas City Star.

Simpson-Eddystone Prints

Every step in the manufacture of these substantial calicoes contributes to the wearing-quality as well as to fine appearance. The cloth is well-woven and lasting; the colors are absolutely fast; and the designs are strikingly beautiful and attractive. The standard Prints since 1842. "Worth making up."

Show this advertisement to your dealer when you order, and don't accept substitutes. If not in your dealer's stock write us his name and address. We'll help him supply you.

The Eddystone Mfg. Co., Philad'a

Founded 1842 by Wm. Simpson Sr.

Some Principles of Health Worth Thinking About.

A large part of the ill-health of the world has come through ignorance. Through ignorance ill-health in certain families is perpetuated from generation to generation. There are certain principles of health that we should better understand and more carefully observe.

All over the country we are having investigations into the malnutrition of children. These investigations show that the causes sometimes reach back for generations, but often also the malnutrition is the result of conditions under which the present generation is living.

Many children are born with all powers for healthy growth, but they are placed under conditions of living that soon impair their powers for growth and render them puny and weak.

A physician says that badly-nourished people contract disease much more readily than other people, and the less readily throw off disease. When they do succeed in throwing off diseases attacking them, that fact is due to the rigid system of feeding under which they have been placed by the physician.

With weak school children it has been found that the digestive impotency was due largely to the frequent eating of candy between meals. This is especially so in the large cities, where a candy store is generally found opposite every school house. Now, the eating of candy at proper times and in proper quantities is not to be discouraged, for candy is a food that produces energy. But candy should not be eaten much between meals. The best time to eat candy is after a meal or at a meal, when the candy will become part of the mass of food consumed and will have its carbohydrates balanced by the other elements consumed. So the candy will be digested with benefit to the whole nutritive system. But when the candy is eaten on an empty stomach, it does two things: It takes away the appetite for the next meal and it often fails of being properly digested, often creating injurious products, which in turn affect disadvantageously the stomach and digestive tracts. Moreover, much of the cheap candy is made of stuff that is not a help to the body into which it is to be incorporated. There are many full-grown people who cannot eat much candy on an empty stomach without experiencing keen suffering on account of it. How much more than does this apply to children?

Frequent bathing is one of the best helps to health. This fact is too little appreciated. At some of the institutions in Chicago, where sick children are taken care of, a thorough bath is given once or twice a day, and the pores of the body opened by rubbings after the bath. The physicians in charge lay great stress on this. Some say that the body does some of its breathing through the skin, and that the skin must be kept in condition to permit the air to come into contact with the circulating fluid.

The constant breathing of air rich in oxygen and low in carbonic content is one of the essential principles of health. "Too much fresh air is just enough," says one eminent health officer. Outdoor life is more and more urged by the physicians, and this kind of a life often works marvels with people that have broken down from being confined in close work rooms and even close school rooms.

The S. S. G. Club.

The club is composed of six girls and its object is to say something good about every one of whom they speak. There are no organized meetings, but the girls are business associates and see much of one another in what social life they have, and it is in this every-day contact that the excellent results of a club with such an object are seen. These six girl friends noticed a growing tendency among their acquaintances to pick flaws in nearly every person who came under discussion. One girl in particular seemed to make it the rule to never say anything good about a person when she could think of something to the contrary to say. It was pure disgust with this girl that set the six friends to studying themselves and they discovered that all too frequently they were ready to help on gossip with an unkind word. Then they decided to join forces and check this tendency whenever they noticed any signs of it in any of the club members. So far as possible they chose to avoid discussing their neighbors' personal affairs, but if they did make a remark about any person it must be something good, or a fine of five cents to be paid for each unkind word uttered. "And whenever we hear anyone giving anybody a 'knock,'" said Inez, "we've got to come to the rescue and give them a 'boost.' The 'Say Something Good' Club is composed of 'boosters,' and woe be to him that 'knocks.'"—Janet Thomas Van Osdel.

Table Suggestions.

An attractive table bespeaks the good housekeeper, and it can be made attractive despite the absence of costly furnishings, as the only necessary requirements for a neat and attractive table are clean table linen and polished dishes, and when a table is neatly and carefully arranged with shining dishes they will lend a dignity and refinement to the table that will in a measure pervade those who surround it.

It has been said that table manners cover much more than the mere eating, for the bearing and attitude largely enter into it, as the table is not a lounging place, and the habit of leaning the elbow on the table or of settling in one's chair as if the spine had collapsed is most uncharitable to the diner's appearance.

When eating bread, it should be broken into small pieces and buttered as wanted; and soup should be taken from the side of the spoon, which is dipped away from the diner, and mothers should pay strict attention to this part of a child's education and start it in right habits. When once learned and followed for a time, correct deportment at table or elsewhere becomes a habit and one which may save its possessor considerable mortification through life, and one of the most refining influences in the home where young people are growing up is an attractive table. This age is offering many beautiful dishes at moderate expense, and they are within the reach of nearly everybody and they compare favorably with the finest china and cut glass if the dishes are kept shiningly clean.

The dishes may be kept bright and given a beautiful polish by washing them through warm suds made with boraxaid soap powder, as this softens the water and makes just enough suds to clean the dishes perfectly without leaving soap on the surface, which is hard to rinse off. This suds is especially good for the painted and gilded china dishes, as it brightens the colors instead of leaving them dull and faded looking; and silver and glass can be kept bright a long time without polishing if they are kept clean by washing through this suds, and after drying the pieces they should be rubbed with a chamois leather or piece of soft flannel to give the high polish.—Aline.

Children and Newspapers.

Some teachers urge their pupils to read the newspapers that they may gain an idea of the important happenings of the day. In some cases credit marks are given for such reading. This would be very well provided that the current events of real moment were the points most likely to catch the eye of the child. But there is far more likelihood that big headlines announcing some gruesome murder or sensational divorce proceedings will catch the eye. And, ten to one, he will read every detail and will dwell upon them long after he has put the paper aside. The effect of such reading on the mind of a child is bad and will go far toward influencing his future life. So long as the average newspaper is what it is, it is not generally safe reading to be placed in the hands of an immature person. There are many good publications that give space to the worth-while occurrences of the day, and a child can safely read these condensed news items and gain a better idea of what she needs to read than from twice the time spent poring over the columns of a daily. Or the parents can discuss important happenings with the children. But until a child has a proper sense of discrimination in his reading matter, keep him from publications that elaborate upon the most sordid and gruesome happenings of a world which really has so much worth while in it.—Janet Thomas Van Osdel.

SPLENDID SUBSCRIPTION PREMIUM.

Beautify Your Home With This Popular Stencil Outfit.

Stenciling has long been a popular form of home decoration and is today used more extensively than ever. Ladies are particular apt at this work, and anyone can produce beautiful effects. From every standpoint stenciling is a very fascinating art of extreme usefulness. You can make the most artistic pillow tops, curtains, portieres, centers, etc., in colors for yourself or for sale, without having any knowledge of painting, by using this up-to-date outfit. In fact, stenciling is so simple with this outfit that a child ten years old can do it.

This outfit is just the thing for beginners. It consists of six cut stencils on special oil board, six cups of water colors (something new, that will not spread, but dries instantly), two bristle stencil brushes, four thumb tacks, also full and explicit directions for mixing colors and using stencils.

Our Subscription Proposition.

Send us Fifty Cents by postoffice money order and we will send you the Universal Magazine for two years and you can select the Popular Stencil Outfit as a free premium.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

CANNING OUTFITS

Can your own fruits and vegetables with a STAHL CANNING OUTFIT. Best and cheapest; all sizes, fully guaranteed; thousands used. We start you with everything necessary for a complete canning factory on the farm. Catalogue Free.

Ropp's Commercial Calculator.

This is a standard book and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor,

Stock Buyer—I'll lose money on the hogs at $4.52½ unless the market improves by tomorrow. The weight is 3895 lbs. Here is your check for $166.25.

Farmer—There surely is a mistake somewhere. Ropp's **New** Calculator makes it $176.25. (p. 58.)

S. B. (after figuring it over carefully)—Correct. Here is a $10 bill with your check. Pardon my mistake.

time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SELECTED POETRY.

THE OLD CORN FIDDLE.

The old corn fiddle, it is almost time,
To swing your tune and to sing your rhyme!
Old corn fiddle and the rosin bow,
To the jubalit of the long ago.
Waltz, sweet lady, till the stars go round,
The old corn fiddle is a pleasant sound!

When the twilight falls at the misty gate,
There's a white hand leads me to my fate,
And a sweet eye shines in the dusk for me
'Neath the weeping limbs of the willow tree.
Waltz, sweet lady, till the moon sits still
In her silver throne on the autumn hill!

There's a mellow glow in the orchards sweet
Where the windfalls lie all around your feet;
There's a honeycomb in the hickory tree,
And the honey drips in the comb for thee;
Waltz, swet lady, when the fiddles play,
Till the stars go down in the silver day!

The reeds make pipes where the river flows
For the lips of Pan where his phantom goes;
But the old corn fiddle is 'lasses sweet
For the juba dance at the twilight feet.
Waltz, sweet lady, as you used to do
When our lips were young and our hearts were true!

Waltz, sweet lady, to the fiddle tune
Where the cider grinds to the amber rune
Of a far, faint music of magic heard
In the wodland voice of the fairy bird.
The old corn fiddle, how sweet, how sweet.
For the dance of dream where the red lips meet!

—Baltimore Sun.

THE PLOW.

From Egypt, behind my oxen, with their stately step and slow,
Northward and East and West I went to the deserts and the snow;
Down through the centuries one by one, turning the clod to the shower,
Till there's never a land beneath the sun but has blossomed behind my power.

I slid through the sodden ricefields with my grunting humpbacked steers,
I turned the turf of the Tiber plain in Rome's imperial years;
I was left in the half-drawn furrow when Coriolanus came,
Giving his farm for the Forum's stir to save his nation's name.

Over the seas to the North I went; white cliffs and a seaboard blue;
And my path was glad in the English grass as my stout red Devons drew;
My path was glad in the English grass, for behind me, rippled and curled
The corn that was life to the sailor men that sailed the ships of the world.

And later I went to the North again, and day by day drew down
A little more of the purple hills to join my kingdom brown;
And the whaups wheeled out to the moorland, but the grey gulls stayed with me
Where the Clydesdales drummed a marching song with their feathery feet on the lea.

Then the new lands called me Westward; I found on the prairies wide
A toil to my stoutest daring and a foe to test my pride;
But I stooped my strength to the stiff black loam, and I found my labor sweet
As I loosened the soil that was trampled firm by a million buffaloes' feet.

Then farther away to the Northward; outward and outward still
(But idle I crossed the Rockies, for there no plow may till!)
Till I won to the plains unending, and there on the edge of the snow
I ribbed them the fenceless wheat fields and taught them to reap and sow.

The sun of the Southland called me; I turned her the rich brown lines
Where her Parramatta peach trees grow and her green Mildura vines;
I drove her cattle before me, her dust, and her dying sheep;
I painted her rich plains golden and taught her to sow and reap.

From Egypt behind my oxen with stately step and slow
I have carried your weightiest burden, ye toilers that reap and sow!
I am the Ruler, the King, and I hold the world in fee;
Sword upon sword may ring, but the triumph shall rest with me!

—Will Ogilvie, in the London Spectator.

THE LEGEND OF EVIL.

This is the sorrowful story,
Told when the twilight falls,
And the monkeys walk together
Holding each other's tails.

"Our fathers lived in the forest,
Foolish people were they,
They went down to the corn-land
To teach the farmers to play.

"Our fathers frisked in the millet,
Our fathers skipped in the wheat,
Our fathers hung in the branches,
Our fathers danced in the street.

"Then came the terrible farmers,
Nothing of play they knew,
Only they caught our fathers
And set them to labor, too!

"Set them to work in the corn-land,
With plows and sickles and flails;
Put them in mud-walled prisons,
And cut off their beautiful tails!

"Now we can watch our fathers,
Sullen and bowed and old,
Sleeping over the millet,
Turning the stupid mould.

"Driving a foolish furrow,
Mending a muddy yoke,
Sleeping in mud-walled prisons,
Steeping their food in smoke.

"We may not speak to our fathers,
For if the farmers knew
They would drive us out of the forest
And set us to labor, too!"

This is the horrible story,
Told as the twilight falls,
As the monkeys walk together
Holding each other's tails.

—Rudyard Kipling.

THE ROUND-UP.

We've rolled up our tarps an' we've corded 'em, too,
An' stowed th' sowbelly an' beans from our view;
Our broncs hev been waitin' since breakin' o' dawn,
An' it's whoop 'em up, boys, fer th' round-up is on!

Oh, there will be plenty o' racin' to-day!
We'll work till th' daylight is gone;
With longhorns a-bawlin' an' dogies a-callin'—
Hooray! for th' round-up is on!

They'll scatter us over a country that's wide,
An' tell us to cover each draw an' divide.
An' not miss a steer, but to round up each one,
Though we race through the brush like a son-of-a-gun!

Oh, there will be plenty o' chasin' to-day,
To test all our muscle an' brawn!
An' there's no denyin' the dust will be flyin'—
Hooray! fer th' round-up is on!

We'll dodge through th' sagebrush an' over cut banks,
While steers on th' prod are a-cuttin' wild pranks!
An' down through th' coules th' cattle will tear,
With heads elevated an' tails in th' air!

Oh, there will be ridin' a-plenty to-day!
No chance we'll git sleepy an' yawn!
Cuss words will be passin' while steers we are lassin'—
Hooray! fer th' round-up is on!

We'll round up th' sleepers, th' dogies an' strays,
An' herd th' bunch home over torturous ways,
An' cut out th' "rusties" an' ev'ry range pest,
An' sweat like th' devil a-brandin' th' rest!

Oh, there will be plenty o' racin' to-day!
We'll ketch it till daylight is gone!
With longhorns a-callin' an' tired calves bawlin'—
Hooray! for th' round-up is on!

—E. A. Brininstool, in Los Angeles Express.

THE QUESTION OF THANKS.

"I never git no thanks at all,"
Said Uncle Hiram Boggs.
"Man's gratitude is mighty small,
An' goin' to the dogs.
I've lent my neighbors lots o' things,
An' showed 'em what to do,
An' the rewards such conduct brings
I say are mighty few.

"You ought," said Grandpa Dinkelspeer,
"To think of all the fun
You've got through bringin' peace an' cheer
Through favors you have done.
The men who wait around for thanks
Don't meet true friendship's test.
They're jest like people at the banks
That look for interest."

—Washington Star.

The Sunday Evening Hold.

There were four little ones, and, while the two smaller were held at some time during every day, Sunday evening was reserved for the special treat of holding each little one for a time, papa joining mamma in this mutual joy-giving. Stories were told, songs sung and little confidences interchanged. Each one had its turn, and ere long they were able to tell by the clock when their "fifteen minutes were up."

Time passed, and as they grew too large for mamma to hold, papa was still strong enough for the occasion, and Sunday evening, literally the Children's Hour, was still looked forward to with pleasure. The quaint little experiences of the week were recalled, some of them amusing, others with a concealed lesson which needed pointing out, and all served to keep the entire family in touch and harmony with each other. Outsiders might have made sport of such large children for "sitting in lap," yet those evenings will be looked back upon in after life as among the most pleasant and most profitable ones of childhood.—Bessie L. Putnam.

Uneeda Biscuit
The Perfect Soda Cracker
Uneeda Biscuit are the perfect soda crackers. The flour used must meet a perfect test. The very purity of the water is made doubly sure. Even the air in the mixing and bake rooms is filtered. The temperature and humidity of the atmosphere is accurately regulated to a uniform degree. The sponge is kneaded by polished paddles. The baking is done in the cleanest of modern ovens. Then Uneeda Biscuit are packed fresh in the purple and white package that keeps them crisp and good from oven to table. Is it any wonder that
Uneeda Biscuit
are recognized as the National Soda Cracker?
Never sold in bulk
5¢
In the moisture-proof package
NATIONAL BISCUIT COMPANY

Teach Patience.

When the toy dog's harness gets into a tangle and baby cries because things will not come right, tell the child that Papa's harness got tangled once, and the first thing that he did was to catch the horse by the bit and fasten it so that it could not run away. Help it to tie the toy dog in the same way. Then when the danger of a run-away is past, teach the child to patiently work out to the end of the tangled threads.

It will take patience for the little one to keep still so long working over the puzzling knots; but patience, and lots of it, is needed in this world. And so long as the dog stands quietly, baby should be willing to work until the tangle is straightened. While next time such an accident occurs it will be independent and know just what to do. Though, if it does not like picking out tangles, the chances are that th[illegible] particular predicament will not [illegible] again. In either case, the [illegible] occur patience is a whole[illegible]esson of Bessie L. Putnam. [illegible]ome one.—

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Brace[illegible] fectly finished. It is not solid gold, but it is [illegible]et. The most elegant design and pertest. Its match cannot be purchased in [illegible] washed and plated and will stand the acid [illegible]untry jewelry stores for any price. It is a duplicate of the latest Parisian creation made expressly for the purpose of using it as a subscription premium to the **Universal Magazine**. The **Universal Magazine** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. RHEUMATISM, KIDNEY, STOMACH AND LUNG TROUBLES

HAVE BEEN CURED WITHOUT A DROP OF MEDICINE

in Hundreds of Cases After Other Treatments Had Failed.

WE PROVE IT TO YOU POSITIVELY

By the Words of Those Who Say They Have Been Cured.

We Do Not Ask You to Take Our Word as Final Evidence.

All we wish is an opportunity to show you the evidence, and [illegible] what wonderful work has been accomplished by Dr. Thacher's M[illegible] **are to be your own judge** as to whether or not you want to use [illegible] own case, the same as others have who have been cured or greatly [illegible] not urge anyone to buy Magnetic Shields; we simply give you the facts [illegible] considering the facts you follow your own judgment. It is your duty to inves[illegible] will cost you nothing to get the facts, and you will obtain much valuable inform[illegible] free of charge upon the subject of Magnetism if you send statement of your case. There is nothing on earth can take the place of Magnetism and do what it can do.

DO NOT GIVE UP HOPE.

Hundreds upon hundreds have been cured or greatly benefited after medicine had failed to do any good. **MAGNETISM GIVES NEW LIFE TO THE SYSTEM.**

YOU HAVE EVERYTHING TO GAIN

—by a careful, thorough investigation, for Magnetic Shields have done all we claim for them and a great deal more, or we certainly would not ask you to make an investigation and use the result of that investigation as the basis from which to judge of the merit of Magnetism as a curative agent.

We Make Magnetic Shields or Appliances for Every Part of the Body for the Treatment of Every Form of Disease.

The accompanying cut shows how Magnetism is radiated from the magnetic vest which covers the entire trunk of the body and keeps all the vital organs and large nerve centers contantly bathed and saturated in a field of magnetic force which gives life and tone to the blood and nerves and strengthens all the organs in the body. Think of living inside of a garment radiating over 500 streams of magnetic force into your system. This and all other Magnetic Shields described in our book "Plain Road to Health" Free to all who describe their cases.

Read the Truth More Forcibly Given in These Letters Than Any Statement We Could Make

A COMPLETE PHYSICAL WRECK, CURED BY DR. THACHER'S MAGNETIC SHIELDS AFTER SEVEN YEARS OF SUFFERING.

Dr. Thacher, Chicago, Ill.

Dear Sir:—In August, 1896, I was in Reading, Penn., with a refrigerator carload of fish. I took a severe cold from going in and out of the car during extreme hot weather. This cold settled in my back, and for seven long years I suffered with pain and untold agony in my back, so severe that I could hardly keep still day or night. I tried all kinds of medicine, was treated by the best physicians in Wilmington, Baltimore and Philadelphia, made several trips to Virginia, where I was treated by specialists in Norfolk and other places. None of them did me any good. They simply took my money; I suffered untold misery and grew worse all the time, until I became a physical wreck, thinking I would have to die. My hair fell out and I was totally bald on the top of my head. I was pale and thin, could not keep warm during moderate weather, and my feet would get cold in a room where the temperature was seventy degrees. I was so weak I could scarcely walk.

I saw your advertisement in a magazine, and wrote to you and purchased one of your Magnetic Belts, with a Head Cap and Insoles. In one night the Magnetic Belt took all the pain out of my back and I have never felt it since. Later I purchased a full set of Shields and they have made a new man of me. I have gained in weight, my hair has grown in, and I feel stronger than I have felt for twenty years, so I can work almost day and night without feeling tired. I have an appetite like I used to have when I was a boy. I believe that if I had not secured your Shields when I did I would soon have gone to Davy Jones' "locker." Very respectfully yours,

C. M. MURDEN, 119 King St., Wilmington, Del.

COMPLICATED CASE OF PILES AND STOMACH TROUBLE RESTORED TO YOUTHFUL VIGOR AT AGE OF SIXTY-FOUR.

Dr. Thacher, Chicago, Ill.

Dear D. Thacher:—It is now eleven years since I first made my acquaintance with the Magnetic Shields. I was then a physical wreck from indigestion and piles, which made life a burden to my existence. I had suffered with a weak stomach from my boyhood, and in the army I contracted the piles and other complicated conditions, which disabled me from active work. One day I called at a house and for the first time learned of the Magnetic Shields. The book, "Plain Road to Health," had been sent to those people and I got it and read it. I recognized and felt the truth of your statements in that valuable work, and concluded that I would send for a Belt and Leggings. I soon felt a new impetus of life and general improvement. My piles left me in three days, and I never had them since. I recovered my health perfectly, and am now in my sixty-fourth year, and I am as sound and active as I was at twenty. I wear the Shields every winter and I am always free from colds, grip, etc. I never have any "tired feeling" and "under the weather," as the majority of people tell about their feelling. I have no aches and pains because the Magnetic vibration of the Shields has re-established perfect circulation of my blood to every fiber of my body; hence my perfect vigor of youth at the advanced age of sixty-four years.

I desire to have this statement published, that it may go out for the benefit of humanity. I shall gladly answer anyone wishing to know more of my case and the nature of this statement.

I am yours with love and gratitude.

N. AEBISCHER, Wausau, Wis.

We have hundreds of letters like the above, stating what marvelous results have been obtained in cases that were considered incurable in many instances. Do not be discouraged. Do not give up hope, even if you have been told your trouble could not be cured, as Nature's methods are wonderful and many cases are restored where medicine has failed to give beneficial results, as shown by the indisputable proof that we will supply you. Investigate our claims, for it is a duty that you owe yourself. All that we ask is for you to write us and send a complete description of your case and let us prove to you what has been done in some cases.

We will send you FREE OF CHARGE our new book, "A PLAIN ROAD TO HEALTH," by C. I. Thacher, M. D., and will advise you just what application of Magnetism will be required for your case. Write us fully today and we will take the same careful pains to advise you as if you called at the office and saw us in person. Don't delay.

POSITIVE PROOF ON YOUR OWN BODY.

If you are skeptical and must see with your own eyes on your own body, TRY A PAIR OF THESE FOOT BATTERIES; They Will Convince You.

They are good for Rheumatism, Cold Feet, Cramps, poor circulation in the extremities, and all forms of weakness in the feet and limbs. They insulate the body against the cold, damp earth, and are worth their weight in gold to any sufferer. Get a pair today. They are worn comfortably in any shoes. The Single Power are $1.00 a pair, or three pairs for $2.00. The Double, or Compound Power, are $2.00 a pair, or three pairs for $4.00, postage paid. Send size of shoe when ordering FOOT BATTERIES. Send a description of your case for free advice and much valuable information on the subject of magnetism.
